ESSAY

ESSAY

ON

MUSICAL CRITICISM.

AS Music may be defined the art of pleasing by the succession and combination of agreeable sounds, every hearer has a right to give way to his feelings, and be pleased or dissatisfied without knowledge, experience, or the fiat of critics; but then he has certainly no right to insist on others being pleased or dissatisfied in the same degree. I can very readily forgive the man who admires a different Music from that which pleases me, provided he does not extend his hatred or contempt of my favourite Music to myself, and imagine that on the exclusive admiration of any one style of Music, and a close adherence to it, all wisdom, taste, and virtue depend.

Criticism in this art would be better taught by specimens of good composition and performance than by reasoning and speculation. But there is a certain portion of enthusiasm connected with a love of the fine arts, which bids defiance to every curb of criticism; and the poetry, painting, or Music that leaves us on the ground, and does not transport us into the regions of imagination beyond the reach of cold criticism, may be correct, but is devoid of genius and passion. There is, however, a tranquil pleasure, short of rapture, to be acquired from Music, in which intellect and sensation are equally concerned; the analysis of this pleasure is, therefore, the subject of the present short Essay; which, it is hoped, will explain and apologize for the critical remarks which have been

VOL. III.

b

made

made in the course of this History, on the works of great masters, and prevent their being construed into pedantry and arrogance.

Indeed, musical criticism has been so little cultivated in our country, that its first elements are hardly known. In justice to the late Mr. Avison, it must be owned, that he was the first, and almost the only writer, who attempted it. But his judgment was warped by many prejudices. He exalted Rameau and Geminiani at the expence of Handel, and was a declared foe to modern German symphonies. There have been many treatises published on the art of musical composition and performance, but none to instruct ignorant lovers of Music how to listen, or to judge for themselves. So various are musical styles, that it requires not only extensive knowledge, and long experience, but a liberal, enlarged, and candid mind, to discriminate and allow to each its due praise :

Nullius addictus jurare in verba magistri.

A critic should have none of the contractions and narrow partialities of such as can see but a small angle of the art ; of whom there are some so bewildered in fugues and complicated contrivances that they can receive pleasure from nothing but canonical answers, imitations, inversions, and counter-subjects ; while others are equally partial to light, simple, frivolous melody, regarding every species of artificial composition as mere pedantry and jargon. A chorus of Handel and a graceful opera song should not preclude each other : each has its peculiar merit ; and no one musical production can comprise the beauties of every species of composition. It is not unusual for disputants, in all the arts, to reason without principles ; but this, I believe, happens more frequently in musical debates than any other. By principles, I mean the having a clear and precise idea of the constituent parts of a good composition, and of the principal excellencies of perfect execution. And it seems, as if the merit of musical productions, both as to composition and performance, might be estimated according to De Piles' steel-yard, or test of merit among painters. If a complete musical composition of different movements were analysed, it would perhaps be found to consist of some of the following ingredients : melody, harmony, modulation,

modulation, invention, grandeur, fire, pathos, taste, grace, and expression ; while the executive part would require neatness, accent, energy, spirit, and feeling ; and, in a vocal performer, or instrumental, where the tone depends on the player, power, clearness, sweetness ; brilliancy of execution in quick movements, and touching expression in flow.

But as all these qualities are seldom united in one composer or player, the piece or performer that comprises the greatest number of these excellences, and in the most perfect degree, is entitled to pre-eminence : though the production or performer that can boast of *any* of these constituent qualities cannot be pronounced totally devoid of merit. In this manner, a composition, by a kind of chemical process, may be decomposed as well as any other production of art or nature.

Prudent critics, without science, seldom venture to pronounce their opinion of a composition, decisively, till they have heard the name of the master, or discovered the sentiments of a professor ; but here the poor author is often at the mercy of prejudice, or envy. Yet the opinion of professors of the greatest integrity is not equally infallible concerning every species of musical merit. To judge minutely of *singing* for instance, requires study and experience in that particular art. Indeed, I have long suspected some very great instrumental performers of not sufficiently feeling or respecting real good singing. Rapid passages neatly executed seem to please them infinitely more than the finest *mezza di voce*, or tender expression of slow notes, which the sweetest voice, the greatest art, and most exquisite sensibility can produce. They frequently refer all excellence so much to their own performance and perfections, that the adventitious qualities of singers who imitate a hautbois, a flute, or violin, are rated higher than the colouring and refinements that are peculiar to vocal expression ; which instrumental performers ought to feel, respect, and try to imitate, however impossible it may be to equal them : approximation would be something, when more cannot be obtained. Of *Composition* and the genius of particular instruments, whose opinion, but that of composers and performers,

who are likewise possessed of probity and candour, can be trusted ? There are, alas ! but too many professors who approve of nothing which they themselves have not produced or performed. Old musicians complain of the extravagance of the young ; and these again of the dryness and inelegance of the old.

And yet, among the various styles of composition and performance, the partial and capricious tastes of lovers of Music, and the different sects into which they are divided, it seems as if the following *criteria* would admit of little dispute.

In *Church Music*, whether jubilation, humility, sorrow, or contrition are to be expressed, the words will enable the critic to judge ; but of the degree of dignity, gravity, force, and originality of the composition, few but professors can judge in detail, though all of the general effect.

In hearing *Dramatic Music* little attention is pointed by the audience to any thing but the airs and powers of the principal singers ; and yet, if the character, passion, and importance of each personage in the piece is not distinctly marked and supported ; if the airs are not contrasted with each other, and the part of every singer in the same scene specifically different in measure, compass, time, and style, the composer is not a complete master of his profession.

Good singing requires a clear, sweet, even, and flexible voice, equally free from nasal and guttural defects. It is but by the tone of voice and articulation of words that a vocal performer is superior to an instrumental. If in swelling a note the voice trembles or varies its pitch, or the intonations are false, ignorance and science are equally offended ; and if a perfect shake, good taste in embellishment, and a touching expression be wanting, the singer's reputation will make no great progress among true judges. If in rapid divisions the passages are not executed with neatness and articulation ; or in adagios, if light and shade, pathos, and variety of colouring and expression are wanting, the singer may have merit of certain kinds, but is still distant from perfection.

Of perfect *performance* on an *instrument*, who can judge accurately

rately but those who know its genius and powers, defects and difficulties? What is natural and easy on one instrument, is often not only difficult but impracticable on an other. *Arpeggios*, for instance, which are so easy on the violin and harpsichord, are almost impossible on the hautbois and flute. And the rapid iteration of notes which give the violin player such little trouble, are impracticable on the harpsichord with the same finger. Those instruments of which the tone and intonation depend on the player, as the violin, flute, hautbois, &c. are more difficult than harps and keyed-instruments, where the player is neither answerable for the goodness of the tone nor truth of intonation. However, there are difficulties on the harpsichord of another kind, to ballance the account, such as the two hands playing two different parts in dissimilar motion at once, and often three or four parts with each hand. Of a good shake, a sweet tone, and neat execution, almost every hearer can judge; but whether the Music is good or bad, the passages hard or easy, too much or too little embellished by the player, science and experience can only determine.

In *Chamber Music*, such as cantatas, single songs, solos, trios, quartets, concertos, and symphonies of few parts, the composer has less exercise for reflection and intellect, and the power of pleasing in detached pieces by melody, harmony, natural modulation, and ingenuity of contrivance, fewer restraints, and fewer occasions for grand and striking effects, and expression of the passions, than in a connected composition for the church or the stage. Many an agreeable lesson, solo, sonata, and concerto, has been produced by musicians who would be unable to compose a *Te Deum* for voices and instruments, or to interest and satisfy an audience during a single act of an opera. We never have heard of Corelli, Geminiani, or Tartini attempting vocal melody, and the Music merely instrumental of the greatest vocal composers is often meagre, common, and insipid. There are limits set to the powers of every artist, and however universal his genius, life is too short for universal application.

It was formerly more easy to compose than play an *adagio*, which generally consisted of a few notes that were left to the taste and abilities of the performer; but as the composer seldom found his ideas fulfilled by the player, *adagios* are now made more *chantant* and interesting in themselves, and the performer is less put to the torture for embellishments.

In 1752, Quantz classed QUARTETTES at the head of instrumental Music, calling them the touch-stone of an able composer; adding, that they had not yet been much in fashion. The divine Haydn, however, has since that time removed all kind of complaint on that account, having produced such quartets for number and excellence, as have never been equalled in any species of composition at any other period of time.

In composing and playing a SOLO, the least complicated of all Music in parts, much knowledge, selection, invention, and refinement are necessary. Besides consulting the genius of the instrument and power of the performer, new, interesting, and shining passages must be invented, which will at once please and surprise the hearer, and do honour to the composer and performer. And who can judge of the originality of the composition, its fitness for the instrument, or degree of praise due to the performer, but those who have either studied composition, practised the same instrument, or heard an infinite variety of Music and great performers of the same kind?

The famous question, therefore, of Fontenelle: *Sonate, que veux tu?* to which all such recur as have not ears capable of vibrating to the sweetness of well-modulated sounds, would never have been asked by a real lover or judge of Music. But men of wit of all countries being accustomed to admiration and reverence in speaking upon subjects within their competence, forget, or hope the world forgets, that a good poet, painter, physician, or philosopher, is no more likely to be a good musician without study, practice, and good ears, than another man. But if a lover and judge of Music had asked the same question as Fontenelle; the Sonata

should

should answer: "I would have you listen with attention and delight to the ingenuity of the composition, the neatness of the execution, sweetness of the melody, and the richness of the harmony, as well as to the charms of refined tones, lengthened and polished into passion."

There is a degree of refinement, delicacy, and invention which lovers of simple and common Music can no more comprehend than the Asiatics harmony (*n*). It is only understood and felt by such as can quit the plains of simplicity, penetrate the mazes of art and contrivance, climb mountains, dive into dells, or cross the seas in search of extraneous and exotic beauties with which the monotonous melody of popular Music has not yet been embellished. What judgment and good taste admire at first hearing, makes no impression on the public in general, but by dint of repetition and habitude. A syllogism that is very plain to a logician, is incomprehensible to a mind unexercised in associating and combining abstract ideas. The extraneous, and seemingly forced and affected modulation of the German composers of the present age, is only too much for us, because we have heard too little. Novelty has been acquired, and attention excited, more by learned modulation in Germany, than by new and difficult melody in Italy. We dislike both, perhaps, only because we are not *gradually* arrived at them; and difficult and easy, new and old, depend on the reading, hearing, and knowledge of the critic. The most easy, simple, and natural is new to youth and inexperience, and we grow nice and fastidious by frequently hearing compositions of the first class, exquisitely performed.

(*n*) The Chinese, allowed to be the most ancient and longest civilised people existing, after repeated trials, are displeased with

harmony, or Music in parts; it is too confused and complicated for ears accustomed to simplicity.

should answer: "I would have von listen with attention and de-
light to the instrument of the common note, the nearest of the
execution, the mass of the melody, and the richness of the har-
mony, as well as to the charm of refined tones, heightened and
purified into passion."
It is a matter of refinement, delicacy, and invention which
loves of simple and common things can no more comprehend than
the artist's harmony (p. 10). It is only understood and felt by such
as can detect the plain of simplicity; penetrate the mass of art and
contrivance, climb mountains, give into bells, or cross the sea in
depth of extremes and exotic beauties, with which the mono-
tonous melody of popular music has not yet been complicated. What
judgment and good taste admit at first hearing, makes no impres-
sion on the public in general, but by dint of repetition and habit-
ude. A syllogism that is very plain to a logician, is incompre-
hensible to a mind unexercised in allocating and combining abstract
ideas. The extremes, and seemly by forced and affected modu-
lation of the common compass of the human voice, is only too
much for us, because we have heard too little. Novelty has been
degraded, and attention excited, more by learned modulation in
Germany, than by new and distant melody in Italy. We dislike
both, partly, only because we are not yet fully arrived at them;
and dislike and care, new and old, depend on the training, hear-
ing, and knowledge of the critic. The most easy, simple, and natural
is new to youth and inexperience, and we grow nice and fastidious
by frequently hearing compositions of the first class, exclusively
performed.

(v) The Chinese, allowed to be the most harmonious of Music in parts; it is too com-
plicated and loaded with little people's ear, and complicated for our accustomed
after repeated trials are dismissed with contempt.

GENERAL HISTORY

OF

MUSIC.

CHAPTER I.

The Progress of Music in England during the Time of King Henry VIII. continued.

A SKETCH of the State of Music in this country during the reign of Henry the Eighth, has already been given in the preceding volume; where cotemporary specimens have likewise been exhibited of the musical productions of our countrymen. Though I can readily believe the motet (*Quam pulcra es*), which goes under the name of this Prince, to be genuine, as it is not too masterly, clear, or unembarrassed for the production of a Royal Dilettanti; yet the anthem printed in Dr. Boyce's collection, upon a more careful examination, seems not only too good for his Majesty, but almost for any other English master during his reign: however, though no marks of superior genius may be discoverable in his compositions, Henry, who was doubtless a judge and an encourager of the art, had, besides the household band on the establishment, according to the ancient custom of our Sovereigns (*a*), supernumerary musicians in his service; as we find in Rymer's *Fædera* (*b*) a grant to William Betum of £ 20 sterling per annum (*c*),

(*a*) See Vol. II. p. 430.

(*b*) *Pro capitoli Organista Regis.* Rymer in anno.

(*c*) William Beton, organ-maker, had likewise a salary of 20*l.* a year from Edward VI.

A. D. 1537, and another grant of £ 50 per annum to the eldest of four brothers, musicians, of the name of Basam, 1540. The second brother had 2s. 4d. *per diem*, and the two youngest 20d. (*d*).

The fluctuating state of religion in England, during this turbulent reign, was such as must have kept the inhabitants in perpetual terror both for soul and body; as what was ordered under severe pains and penalties to be practised and believed as necessary to salvation at one period, at another was pronounced illegal, heretical, and damnable. Music in the church, however, appears to have undergone no other change at this time than in being applied in some parts of the service to the English instead of the Latin language; but though choral music was not much affected by the small progress that was made in the reformation under this Prince, yet it was in frequent danger of utter abolition by the violence of the times, and fanaticism of the most furious reformers.

After Henry's breach with the Roman Pontiff, several slight alterations were made in the Liturgy, yet still the service was in Latin, and *sung* in the usual manner.

The King's *Primer*, in English, was published in 1535.

In 1536, Tyndal's translation of the whole Bible was not only printed, but ordered to be received into churches.

In 1538, a folio translation of the Bible was ordered to be had in every church; this was Tyndal's, with a few alterations by Coverdale.

In 1539, the *Bloody Act*, or Six Articles of Convocation, passed; and in the same year, a book of *Ceremonies* was published, in which (*e*) is the following passage favourable to choral music:
 “ The sober, discrete, and devout singing, music, and playing
 “ with organs, used in the church, in the service of God, are or-
 “ dained to move and stir the people to the sweetnes of Godis word,
 “ the which is ther sung: and by that sweet harmony both to ex-
 “ cite them to prayer and devotion, and also to put them in re-
 “ membraunce of the heavenly triumphant church, where is ever-
 “ lasting joy, continual laud, and praise to God (*f*).”

(*d*) Rymer *in anno*.
 (*e*) Sect. *Service of the Church*.

(*f*) Strype's *Ecclesi. Memorials*. Ap-
 pend. to Vol. I. p. 284.

On the contrary, the furious reformers, according to one of *The Seventy-eight Fautes and Abuses of Religion*, in the *Protestation of the Clergie of the Lower House* within the province of Canterbury, presented to the King 1536, declared, that “ Synging, “ and saying of mass, matins, or even song, is but roryng, howl- “ ing, whistelyng, mummyng, conjuryng, and jogelyng, and the “ playing at the organys a foolish vanitie (*g*).”

At Henry’s funeral, however, all the ceremonies of the Romish church seem to have been performed in the ancient manner: “ Wednesday 16th Feb. 1547, the Bishop of Ely began the mass “ of the Trinity. His Dean and Subdeacon were two Bishops “ mitred, which mass was solemnly sung in *prick-song discant*, and “ organ playing, to the offertory (*b*).”—“ Then three Bishops “ came down to the herse; after them followed the Archbishop “ of Canterbury, and stood a little behind the Bishops with his “ crosses. Then the Quire with one voice did sing *circumde- “ derunt me*, with the rest of the canticle funeral; and the Bi- “ shops *cenfing* the corps, with ceremonies thereunto appertain- “ ing (*i*). When the mold was brought and cast in the grave “ by the Prelate executing, at the words *pulverem pulveri*, and “ *cinerem cineri* (*k*), first the Lord Great Chaumberlain and al “ others afore said in order, with heavy and dolorous lamentations “ brake their staves, &c. with exceeding sorrow and heaviness, not “ without grievous sighs and tears very piteous and sorrowful to “ behold.—Then the trumpets sounded with great melody and “ courage, to the comfort of al them that were there present (*l*). “ And al these things were don afore fix of the clock of the same “ day (*m*).”

E D W A R D VI.

Musie seems not to have been omitted in the education of Henry’s successor, Edward VI. For not only Cardan, in his

(*g*) Ib. Append. 178.

(*b*) Strype, Vol. II. Repository, p. 15, from an ancient MS.

(*i*) Ib. p. 17.

(*k*) Here is a proof that the service was

still in Latin.

(*l*) This was after proclaiming King Edward.

(*m*) Ib.

character of this young Prince (*n*), tells us, that “ he was not “ ignorant of Logic, of the principles of Natural Philosophy, *nor of Music*; but in his own journal, preserved in the collection of records, &c. in the appendix to Burnet’s History of the Reformation (*o*), he says, July 20th, 1550, “ M. le Marechal St. André, “ the French Ambassador, came to me in the morning to mine “ arraying, and saw my bed-chamber, and went a hunting with “ hounds; and saw me shoot, and saw all my guards shoot together. “ He dined with me, heard me *play on the lute*, (saw me) ride; “ came to me to my study; supped with me, and so departed “ to Richmond.”

The musical establishments of the Household and Chapel Royal, during this reign, seem to have been nearly as ample as those of any other English Sovereign, before or after this period (*p*). And as not only the number and names, but the salaries of the several musicians in the service of the Court, during this reign, are recorded in a MS. of the British Museum, I shall present them to the reader in the language of the times.

The number of boys in the chapel is not specified, though there is an allowance for their maintenance and teaching.

In the journal of this amiable young Prince, we find that use was made of these muficians upon all great occasions: for he tells us, that, April 29th, 1549, “ The Count d’Enguien, brother to “ the Duke of Vendosme, and next heir to the Crown (of France) “ after the King’s children; the Marquis de Means, (Meun) “ brother to the Scotch Queen; and Monsieur Montmorency, the “ Constable’s son, came to the Court, where they were received “ with *much Musick* at dinner.” And the next year, when he was visited by the Queen Dowager of Scotland, after a great public entertainment, which was given with the utmost splendour and magnificence, to this Princess, in Westminster, he says, “ After “ dinner, when she had heard *some Musick*, I brought her to the “ Hall, and so she went away.” And it appears that Music, which,

which, at present, only augments the noise and confusion of a city feast, was thought, during the sixteenth century, the most elegant regale that could be given to Princes in every Court of Europe. An engraving, by Hollar, from an ancient illumination, and inserted in Ashmole's *History of the Order of the Garter* (s), represents Ferdinand, Prince of Spain, on the day of his investiture, sitting with the habit and ensigns of the Order, attended by the four Commissioners of Legation, two on each side; on the left are the officers of his Court, and on his right two men and a boy, *each singing out of a Music Paper*, and behind them three other persons, supposed likewise to be singing. Glareanus, at the end of his *Dodecachordon*, in relating the circumstance already mentioned in the Second Volume (t), of Lewis XII. of France desiring Jusquin to compose a song for him, in which he could bear a part, tells us, that it was produced the next day, *after dinner*, at the time that his Majesty usually called for Music (u).

Indeed, according to Roger Ascham (x), the Emperor Charles V. was entertained with Music, during his repast, in the manner of my Lord Mayor; for he tells us, in a letter written from Augsb-
 burg, January 20, 1551, that he had stood by the Emperor's table, and that "his Chapel sung wonderful cunningly all the
 "dinner while." This seems an abuse of Music; for though one of the Benedictine monastic rules is, that "no Monk shall speak
 "a word in the refectory during meals;" and another says, "Let
 "them listen to the lecturer reading scripture to them whilst they
 "feed themselves," a rule that is still observed in our Universities by the under graduates in the halls of some of the colleges, during dinner; yet we may suppose that the original intention of these lectures was to counteract sensuality. But Music at a city feast, by interrupting conversation, has a contrary effect, and serves only to enforce the precept, *Hoc age*, by telling the company that at such times "Delays are dangerous (y)."

It

(y) Indeed, in these important moments, no conversation can be carried on without manifest

It was during the reign of Edward VI. that METRICAL PSALMODY, in the same manner that it is still practised in our parochial churches, had its beginning, or at least became general in England, by the version of Thomas Sternhold, John Hopkins, and others; which, though it now appears bald, coarse, and despicable, was then equally refined with the poetical taste of the most polite courtiers and polished scholars of the nation (z). But time, which has added strength and energy to the *prose* translation of the Psalms, as well as other parts of Scripture, and made them still more venerable, has rendered the *verse* of these translators a disgrace to our literature and religion. But I shall trace this manner of singing hereafter to a much higher period, and give a chronological account of its progress in the principal reformed churches, till the close of the sixteenth century; as the subject seems to require a particular description.

With respect to the cathedral service, as far as concerns chanting and the responses in unison, an ample account has been given, in the Second Volume (a), concerning the manner in which it was set and published by John Marbeck, in 1550; but to resume the consideration of *Choral Music* from the death of Henry VIII. and to point out by what degrees the great work of reformation was accomplished, I shall give a chronological summary of the principal events relative to Music in our Ecclesiastical History, from the best writers on the subject.

manifest loss; for during the shortest story that can be told, or even the mere repetition of a *bon mot*, the fat of a haunch of venison, or, which is still a greater misfortune, the whole *calapash* and *calapce* of a turtle have disappeared!

A friend of the author, having been invited two or three successive years to an annual venison feast, found at last, that being less a helluo than the rest of the company, he had constantly lost his dinner by telling a long story of an uncommon malady which had carried off his father; but the next time he was invited to meet the same company, when a wag, who sat near him, wishing to employ him again in the same manner, that he might avail himself of his inactivity, begged him, just as the haunch

was served, to relate the manner in which his father died; my friend, to cut the matter short, said, "Sir, my father died suddenly,"—and immediately went to work with as much vigour as the rest.

(z) Fuller, in his quaint and quibbling way, tells us that Sternhold, "who was Groom of the Robes to Henry VIII. and afterwards of the Bed-chamber to Edward VI. was one of them who translated the Psalms into *English meter*, being then accounted an excellent poet; though he who wore *bayes* then, deserves not *ivie* now."

Church Hist. of Brit. Vol. I. Cent. XVI. Book v. p. 252. publ. 1655.

(a) See p. 578.

The

The compline, being a part of the Evening Prayer, a kind of final chorus, was sang *in English* in the King's chapel, 1547, before any act of Parliament enjoined it (*b*).

In the 21st injunction, 1547, "and that in time of *high mass*, " he that sayeth or singeth a *Psalm*, shall read the Epistle and Gospel in English (*c*)."

23d—"Immediately before high mass the litany shall be distinctly said or sung, &c. (*d*)."

The same year the *compline* was sung in the King's chapel on Monday in Easter week, April 11th, in the English tongue.

On the 19th of June, St. Paul's, and in other London churches, a *dirige* was sung for the death of Francis I. of France, and next day the Archbishop of Canterbury sung a mass of requiem in the choir of St. Paul (*e*).

In September the litany was sung in the English tongue at St. Paul's, Bishop Bonner being in the Fleet prison. Images taken down soon after.

The English Liturgy, or Book of Common Prayer, was published, and ordered to be generally used, 1548; but the books could not be furnished to the whole kingdom till next year, 1549, when on Whitsunday it was first used in St. Paul's church. This year all *antiphonaries*, *missals*, *breviaries*, *offices*, *horaries*, *primers*, and *processionals*, were called in, and destroyed. Calvin, Peter Martyr, Bucer, and the Zwinglians, breed schisms among the reformers, and augment the number of puritans and fanatics throughout the nation (*f*).

It seems as if, till this reign, 1549, parish churches had used the plain chant as well as cathedrals: for at a visitation this year, complaint was made that the priests read the prayers with the same tone of voice that they had used formerly in the Latin service (*g*), &c. however, in the Forty-one Articles of Religion, prepared in this reign, 1551, not a word is said concerning cathedral chanting,

musical service, or parochial psalmody. Edward, who died July 6th, 1553, was buried by Archbishop Cranmer, according to the reformed rites of the church, August 8th, though Mary was his successor.

The principal composers of services and full anthems during the short reign of Edward, were Dr. Christopher Tye, John Shephard, Robert Johnson, Robert Parsons, Robert White, Richard Farrant, and Thomas Tallis. Dr. Tye, though not inserted in the list of Musicians of the Chapel Royal or Household in this reign, was doubtless at the head of all our ecclesiastical composers of that period. Neither the state of the church, nor religious principles of its nominal members, were so settled as to render it possible to determine, in these times, who among quiet and obedient subjects were protestants, and who catholics; for, during the conflict between the zealots of both religions, the changes were so violent and rapid, that great flexibility or great dissimulation must have been practised by those who not only escaped persecution, but still continued in offices, either of Church or State. The few who seem to have been truly pious and conscientious on both sides, suffered martyrdom in support of their opinions; the rest seem to have been either unprincipled, or fluctuating between the two religions. One of the principal evils which the champions for reformation combated, was the use of the Latin language in the service of the church; however, the best choral compositions produced by the masters of these times, that are come down to us, are to Latin words. Specimens have been already given (*b*) of Dr. Tye's clear and masterly manner of composing for the church in that language, when he was at least a nominal catholic, either during the reign of Henry VIII. or Queen Mary; and the late worthy Dr. Boyce has given an admirable example of his abilities in the anthem for four voices, "I will exalt thee, O Lord," inserted in the second volume of his excellent *Collection of Cathedral Music, by English Masters*. There is hardly any instance to be found in the productions of composers for the church during his time, of a piece so constantly and regularly in any one

(*b*) Vol. II. p. 589.

key as this is in the key of C minor, and its relatives; the harmony is pure and grateful; the time and melody, though not so marked and accented as in those of the best compositions of the present century, are free from pedantry, and the difficulties of complicated measures, which this composer had the merit of being one of the first to abandon (*i*). That he translated the first fourteen chapters of the Acts of the Apostles into metre, in imitation of Sternhold's Psalms, which were the delight of the Court in which he lived, was doubtless an absurd undertaking, and was not rendered less ridiculous by the elaborate music to which he set them, consisting of fugues and canons of the most artificial and complicated kind (*k*). Dr. Tye, however, if compared with his contemporaries, was perhaps as good a poet as Sternhold, and as great a musician as Europe could then boast; and it is hardly fair to expect more perfection from him, or to blame an individual for the *general* defects of the age in which he lived.

Of Shepherd, Johnson, and Parsons, notice has already been taken, and a specimen of the composition of each inserted in the preceding volume. Richard Farrant, one of the Gentlemen of Edward's and Elizabeth's chapel, and some time Master of the children of St. George's chapel at Windsor, died about 1585. Dr. Boyce has published several of his productions, which are grave and solemn, but somewhat dry and uninteresting. As White and Tallis chiefly distinguished themselves during the time of Queen Elizabeth, we shall class them among composers of that reign.

QUEEN MARY.

During the short reign of Queen Mary, Ecclesiastical Music was again transferred to Latin words, which seems to have been

(*i*) The point, in the second part of his anthem, to these words, "Thou hast turned my sorrow into joy," is admirable in respect of harmony and contrivance; indeed I can recollect nothing in Palestrina or Tallis superior to it.

(*k*) Mr. Warton (*Hist. of Poetry*, Vol. III. p. 192), seems to take *literally* what the author in his dedication to Edward VI.

says of his *notes*; but he only assumes that coquettish kind of modesty which is expected from an author, in speaking of his own productions: and when he says, "though they be not *curious*," he does not mean that they were "*plain and unisonous*;" nor was that "the established character of this sort of Music."

the principal change that the renewal of Roman catholic rites and ceremonies had occasioned in choral singing; as metrical psalmody had not yet been generally received in our parochial churches, though a *proviso* was made for it, in the Act of Uniformity for the use of the Common Prayer, so early as the reign of Edward VI.

This gloomy and bigotted Princess was herself a performer on the virginals and lute, as appears by a letter sent to her by Queen Katherine, her mother, after her separation from the King, in which “ she encourages her to suffer chearfully, to trust to God, “ and keep her heart clean. She charged her in all things to “ obey the King’s commands, except in matters of religion. She “ sent her two Latin books, the one *De Vita Christi*, and the “ other the Epistles of St. Jerom; in them, says the Queen, I “ trust you shall see good things. And sometimes, for your recreation, use your virginals, or lute, if you have any (l).”

Fuller tells us (m), that “ eight weeks and upwards passed between the proclaiming of Queen Mary and her assembling the Parliament: during which time two religions were together set on foot, *Protestantisme* and *Poperie*; the former hoping to be continued, the latter labouring to be restored;—and during this *interim* “ the churches and chapels in England had a *mongrel celebration* of “ their divine services betwixt reformation and superstition. For “ the obsequies for King Edward were held by the Queen in the “ Tower, August 7th, 1553, with the *dirige* sung in Latin, and “ on the morrow a masse of *requiem*, and on the same day his “ corps were buried at Westminster with a *sermon service*, and “ communion in English.”

In October following, the laws of her predecessor, Edward, concerning religion, were all repealed. And in November 1554, Bishop Bonner “ set up the old worship at Paul’s, on St. Katherine’s day; and it being the custom, that on some holy-days, the quire went up to the steeple to sing the anthems, that “ fell on that night:—and the next day, being St. Andrew’s, he “ did officiate himself, and had a solemn procession (n).”

After this period, during the subsequent years of Mary's reign, the public service was every where performed in the Roman catholic manner, throughout the kingdom; and we may imagine, that the numerous compositions to Latin words, which have been preserved, of Dr. Tye, White, Tallis, Bird, and the rest of our most eminent harmonists, were produced and performed at this time, while the Romish religion had the ascendant. And indeed it appears by a record now in the possession of the Antiquarian Society, that the list of Mary's chapel establishment contains nearly the same names as those which have been already given in that of her brother Edward.

QUEEN ELIZABETH.

In speaking of Choral Music during the long and prosperous reign of Queen ELIZABETH, our nation's honour seems to require a more diffuse detail than at any other time: for perhaps we never had so just a claim to equality with the rest of Europe, where Music was the most successfully cultivated, as at this period; when indeed there was but little melody any where. Yet, with respect to harmony, canon, fugue, and such laboured and learned contrivances as were then chiefly studied and admired, we can produce such proofs of great abilities in the compositions of our countrymen, as candid judges of their merit must allow to abound in every kind of excellence that was then known or expected.

Elizabeth, as well as the rest of Henry VIII.'s children, and indeed all the Princes of Europe at that time, had been taught Music early in life. For Camden (o), in giving an account of her studies, says, that "she understood well the Latin, French, " and Italian tongues, and (was) indifferently well seen in the " Greek. Neither did she neglect Musicke, so far forth as might " become a Princess, being able to sing, and play on the lute. " prettily and sweetly."

(o) *Annales, or the History of Elizabeth, late Queen of England.* Transl. by R. N. Gent. 3d edit. 1635. fol. p. 6.

There:

There is reason to conclude that she continued to amuse herself with Music many years after she ascended the Throne. Sir James Melvil (*p*) gives an account of a curious conversation which he had with this Princess, to whom he was sent on an embassy by Mary Queen of Scots, in 1564. After her Majesty had asked him how his Queen dressed? What was the colour of her hair? Whether that or her's was best? Which of them two was fairest? And which of them was highest in stature? "Then she asked what kind of exercises she used?" I answered, says Melvil, "that when I received my dispatch, the Queen was lately come from the Highland hunting: that when her more serious affairs permitted, she was taken up with reading of histories: that sometimes she recreated herself in playing upon the lute and virginals. She asked if she played well? I said, reasonably for a Queen (*q*)."

"The same day, after dinner, my Lord of Hunsden drew me up to a quiet gallery, that I might hear some Musick, (but he said that he durst not avow it), where I might hear the Queen play upon the virginals. After I had hearkened a while, I took

(*p*) *Memoirs*, 2d edit. Edinburgh, 1735.

(*q*) This Princess, besides her personal charms, captivating powers of conversation, knowledge of six several languages, and a sufficient skill in Music for a person of her high rank, had an inclination, at least, towards Poetry. Brantome says, "*Elle se m'loito d'être Poëte et composoit des vers, dont j'ai vu aucuns de beaux et très bien-faits,*" &c. The following specimen of her versification is given in the *Dict. du Vieux Langage*, p. 337.

*Chanson de Marie Stuart, Reine d'Ecosse,
en partant de Calais pour Londres.*

*Adieu plaisant pays de France,
O ma patrie la plus chérie!
Que a norrit ma jeune enfance,
Adieu France, adieu mes beaux jours!
La nef qui déjoit nos amours,
N'a cy de moi que la moitié,
Une part te reste, elle est tienne,
Je la fie à ton amitié,
Pour que de l'autre il te souviene.*

Song written by Mary Queen of Scots in sailing from Calais to London, 1560

Farewell the sweet, the ever blest abode!
Farewell the country to my soul most dear!
Where none but pleasure's flow'ry paths I
trod,

Far from the gloomy haunts of strife and fear.
The ship that wafts me from thy happy shore,
Is only freighted with the meaner part*;
And, while my youthful pleasures I deplore,
Leaves thee in full possession of my heart.

There is in the British Museum, No. 1265, a cantata, set by Giacomo Carissimi, on the death of this Princess, which begins by a recitative, in which she addresses herself to the executioner: *Ferma, lascia ch'io parli*; this is followed by an air, in *adagio*, that is full of uncommon simplicity, and energy of passion: *A morire, a morire*; but it is too soon as yet to give specimens of such music.

* Shakspeare has the same thought in his lxxivth sonnet:

"My spirit's thine, the better part of me"—

*See Suppl. to Johnson and Steevens's edit.
Vol. I. p. 640.*

" by

“ by the tapestry that hung before the door of the chamber, and
 “ seeing her back was toward the door, I entered within the
 “ chamber, and stood a pretty space hearing her play excellently
 “ well. But she left off immediately, so soon as she turned about
 “ and saw me. She appeared to be surprised to see me, and came
 “ forward, seeming to strike me with her hand; alledging, she
 “ used not to play before men, but when she was solitary, to shun
 “ melancholy. She asked how I came there? I answered, as I
 “ was walking with my Lord Hunsden, as we passed by the cham-
 “ ber door, I heard such a melody as ravished me, whereby I was
 “ drawn in ere I knew how; excusing my fault of homeliness,
 “ as being brought up in the Court of France where such free-
 “ dom was allowed; declaring myself willing to endure what kind
 “ of punishment her Majesty should be pleased to inflict upon me
 “ for so great offence. Then she sat down low upon a cu-
 “ shion, and I upon my knees by her; but with her own hand she
 “ gave me a cushion, to lay under my knee; which at first I re-
 “ fused, but she compelled me to take it.—She enquired whether
 “ my Queen or she played best. In that I found myself obliged
 “ to give her the praise.”

If her Majesty was ever able to execute any of the pieces that are preserved in a MS. which goes under the name of *Queen Elizabeth's Virginal Book*, she must have been a very great player: as some of these pieces, which were composed by Tallis, Bird, Giles, Farnaby, Dr. Bull, and others, are so difficult, that it would be hardly possible to find a master in Europe who would undertake to play one of them at the end of a month's practice. But of this MS. we shall have further occasion to speak hereafter.

Besides the lute and virginals, it has been imagined that Elizabeth was a performer on the *violin*, and on an instrument something like a lute, but strung with wire, and called the poliphant (*r*). A violin of a singular construction, with the arms of England, and the crest of Dudley, Earl of Leicester, this Queen's favourite, engraved upon it, was purchased at the sale of the late Duke of

(*r*) Quere, *polyphon*? from πολυς, *multus*, φωνη, *vox*, *sonus*: i. e. an instrument of many strings, or sounds.

Dorset's effects. The date of its make, 1578 (s). It is very curiously carved; but the several parts are so thick and loaded with ornaments, that it has not more tone than a mute, or violin with a sordine; and the neck, which is too thick for the grasp of the hand, has a hole cut in it for the thumb of the player, by which the hand is so confined as to be rendered incapable of shifting, so that nothing can be performed upon this instrument but what lies within the reach of the hand in its first position. Playford (t) tells us, that "Queen Elizabeth was not only a lover of this divine science (Music) but a good proficient therein; and I have been informed (says he) by an ancient musician, and her servant, that she did often recreate herself on an excellent instrument, called the *poliphant*, not much unlike a lute, but strung with wire."

Among the Sloane MSS. in the British Museum, No. 1520, there is a list of the officers of the Court of Revenue in this reign; in which is included the musical establishment of her Majesty's household, about the year 1587.

Her Majesty's chapel establishment was nearly the same, in number and salaries, as that of her brother and sister, Edward and Mary. Indeed, it seems as if the religious scruples of musicians had been considerably diminished by the severity with which Testwood had been treated in the time of Henry VIII. and the peril into which Marbeck's zeal for reformation had involved him (*u*). For in comparing the chapel establishments of Edward, Mary, and Elizabeth, we find, that however the creeds of these Monarchs differed, their musicians had constantly tuned their consciences to the Court pitch: *i. e.* in perfect unison with the orders of their Sovereign, *the Supreme Head of the Church*.

Camden (*x*) says, that "the Romish religion remained a full moneth and more after the death of Queen Mary, in the same state as before (*y*)."
For Elizabeth, who began her reign November 17th, 1558, had a solemn service performed for her sister Mary at Westminster, December 5th, and another December 20th, for the Emperor Charles V. (*z*); and these, as well as her own coronation, were celebrated in the Romish manner.

Burnet (*a*) says, that "Elizabeth had been bred up from her infancy with a hatred of the Papacy, and a love to the Reformation: but yet as her first impressions in her father's reign were in favour of such old rites as he had still retained; so in her own nature she loved state, and some magnificence, in religion as well as in every thing else."

Neal, in his *History of the Puritans* (*b*), says, that the service of her chapel was not only sung with organs, but with other instruments, such as cornits, sacbuts, &c. on festivals. In 1559, the

(*u*) Testwood, a singing-man in the choir of Windsor, was burnt for his intemperate zeal in the cause of Protestantism, 1544, when Marbeck was likewise condemned, but afterwards pardoned.

published injunctions for the clergy, in the forty-ninth of which there is one for Choral Music (c). “ For the encouragement, and
 “ the continuance of the use of singing in the Church of England,
 “ it is enjoined; that is to say, that in divers collegiat, as well as
 “ some parish churches, heretofore there hath been livings ap-
 “ pointed for the maintenance of men and children for singing in
 “ the church, by means whereof the laudable exercise of Musick
 “ hath been had in estimation, and preserved in knowledge; the
 “ Queen’s Majesty neither meaning in any wise the decay of any
 “ that might conveniently tend to the use and continuance of
 “ the said science, neither to have the same so abused in any part
 “ of the church, that thereby the Common Prayer should be worse
 “ understood by the hearers, willeth and commandeth, that, first,
 “ no alterations be made of such assignments of living as heretofore
 “ hath been appointed to the use of singing or Musick in the church,
 “ but that the same so remain, and that there be a modest and di-
 “ stinct song, so used in all parts of the common prayers of the
 “ church, that the same may be plainly understood as if it were
 “ without singing; and yet nevertheless, for the comforting of
 “ such as delight in Musick, it may be permitted, that in the be-
 “ ginning or in the end of common prayer, either at morning or
 “ evening, there may be sung an hymn, or such like song, to the
 “ praise of Almighty God, in the best melody and musick that may
 “ be conveniently devised, having respect that the sentence of the
 “ hymn may be understood and perceived.”

“ According to which order,” says Heylin, “ as plain-song was
 “ retained in most parish churches for the daily Psalms, so in her
 “ own chapels, and in the quire of all cathedrals, and some col-
 “ leges, the hymns were sung after a more melodious manner,
 “ with organs commonly, and sometimes with other musical instru-
 “ ments, as the solemnity required. No mention is made here,”
 adds this writer, “ of singing David’s Psalms *in metre*, though after-
 “ wards they first thrust out the hymns which are herein men-
 “ tioned, and by degrees also did they the *Te Deum*, the *Magni-*
 “ *ficat*, and the *Nunc Dimittis*.”

(c) See Sparrow’s *Collect. of Articles, Injunctions, and Canons*, 4to. 1684, and Heylin, p. 289.

It was by the moderation, liberality, and intelligence of this injunction, that Choral Music was saved from utter extirpation in this country; for the outcry and violence of the puritans against *playing upon organs, curious singing, and tossing about the Psalms from side to side* (meaning antiphonal, or alternate singing), were at this time so great, that they could only be restrained by an exertion of all the power and firmness of this Princess.

“ In 1560, the Church of England, as it was first settled and
 “ established under Queen Elizabeth, may be regarded as brought
 “ to perfection. The government of the church by Archbishops
 “ and Bishops; its doctrines reduced to its ancient purity, ac-
 “ cording to the Articles agreed on in Convocation, 1552; the
 “ Liturgy, conformable to the primitive patterns, and all the rites
 “ and ceremonies therein prescribed accommodated to the honour
 “ of God, and increase of piety. The festivals preserved in their
 “ former dignity; the sacrament celebrated in most reverend man-
 “ ner; Musick retained in all such churches in which provision
 “ had been made for the maintenance of it, or where the people
 “ could be trained up at least to *plain-song*. All which particu-
 “ lars were either established by the laws, commanded by the
 “ Queen’s injunctions, or otherwise retained by virtue of some
 “ ancient usages not by law prohibited. Nor is it much to
 “ be admired, that such a general conformity to those ancient
 “ usages was constantly observed in all cathedrals, and the most
 “ part of the parish churches, considering how well they were
 “ preceded by the Court itself, in which the Liturgy was offi-
 “ ciated every day both morning and evening, not only in the
 “ public chapel, but the private closet; celebrated in the chapel
 “ with organs and other musical instruments, and the most excel-
 “ lent voices, both of men and children, that could be procured
 “ in all the kingdom (d).”

When Elizabeth first met her Parliament, she desired them to consider religion without heat, partial affection, or using any reproachful terms of Papist or Heretic, and that they would avoid

(d) Heylin, p. 296.

the extremes of idolatry and superstition on the one hand, and contempt and irreligion on the other. And thus this wise Princess seems always to have steered, according to the true spirit of the Church of England, between the two extremes of superstitious bigotry, and irreverent fanaticism; a golden mean that seems best to suit with our mixed government, which is neither wholly monarchical nor democratical, but, when well administered, a perfect compound of both; being neither necessarily so parsimonious nor indigent as to degrade the King, or the great officers and magistrates of the realm, below that dignity which impresses reverence and respect; nor to require a ruinous pomp and luxury; but consistent with such splendor, magnificence, and encouragement of elegant arts and liberal science as become a great and affluent state, equally secured from regal tyranny, and popular insolence. One of the wisest, or at least the most liberal exercises of this Queen's prerogative, seems to have been the proclamation which she issued in the second year of her reign *against defacing the monuments* in churches; for so savage was the rage of the puritans and fanatics of this time, that under the pretence of destroying popery and idolatry, they ruined and demolished in our public buildings whatever was sufficiently elegant and venerable to distinguish us from Barbarians.

Elizabeth, who succeeded to the crown in November, 1558, on the 28th of April, 1559, gave the royal assent to the bill for the *Uniformity of Common Prayer*, or English Liturgy, which was to take effect the 12th of May; but so eager was her Majesty to hear the reformed service, that she anticipated its restoration, by having it performed in her chapel on Sunday, May the 2d, four days after the act had passed (e). This Liturgy was printed the same year by Grafton, with the following title: "The Booke of Common Prayer, and Administration of the Sacraments, and other Rites and Ceremonies of the Church of England." And the licence contained in the rubrics, allowing it to be either said or sung, and ordaining that in *choirs* and places where they sing, the *anthems* shall follow certain parts of the service, is a plain indication that

(e) Strype, Vol. I. p. 191..

the choral, as well as the parochial service, was authorised and established.

I have found no other Music printed expressly for the cathedral service to English words during the reign of Edward VI. than that of Marbeck (*f*), which was mere *canto fermo*, without counterpoint; but the year after the publication of the English Liturgy by Queen Elizabeth, the following choral work appeared: "Certaine notes set forth in foure and thre parties, to be song at the Morning Communion, and Evening Praier, very necessarie for the Church of Christe to be frequented and used: and unto them be added diuers Godly Praiers and Psalmes, in the like forme, to the honour and praise of God. Imprinted at London, over Aldersgate, beneath St. Martins, by John Day, 1560." The authors of these compositions were Tallis, Cawston, Johnson, Oakland, Shepherd, and Taverner.

For the performance of this kind of Music in our cathedrals, great diligence was used, and indeed some violence, in the manner of procuring singers. It seems as if our Monarchs of former times had either rewarded the talents of their singers no more liberally than sailors, or that musicians were then less sensible of the honour of attending royalty than at present; for it appears by a precept, preserved in Rymer's *Fœdera* (*g*), so early as the reign of the gentle Henry VI. 1454, that they attended with such reluctance as to make it necessary to *impress* them into the service (*h*). Luckily his present Majesty is reduced to the exercise of no such stretch of power in procuring recruits, either for his band of music or chapel;

(*f*) See Vol. II. p. 578.

(*g*) Tom. XI. p. 375.

(*h*) The form of the placard is the following:

De Ministrallis propter solatium Regis providendis.

"*Rex, dilectis sibi, Walthero Halyday, Roberto Marshall, Wilhelmo Wykes, & Johanni Clyff, salutem.*

"*Sciatis quod nos, considerantes qualiter quidem Ministralli nostri jam tardè viam universæ carnis sunt ingressi, aliisque loco ipsorum, propter solatium nostrum, de necessesse indigentes, assignavimus vos, conjunc-*

"*tim & divisim, ad quosdam pueros, membris naturalibus elegantes, in Arte Ministrellatûs instructos, ubicunque inveniri poterint, tam infra libertates, quàm extra, capiendum, & in servitio nostro ad vadia nostraponendum,*" &c. The requisition that the boys thus impressed should be not only skilled in the art of minstrelsy, but *handsome and elegantly shaped*, seems to point at the theatrical use that was frequently made of the choristers of cathedrals, as well as the private chapels of Noblemen, in acting plays, mysteries, and moralities, on particular festivals.

for so many more volunteers now crowd to the standards of the Chamberlain of the Household, and Dean of the Chapel Royal, than can be received, that it is more necessary to *press them* to depart, than to enter into the service.

In the time of Henry VIII. when Music was more cultivated in England than it had ever been before, a similar power was given to the Deans of cathedrals and collegiate churches for supplying their several choirs with children possessed of good voices by this arbitrary and oppressive method. John Tuffer, the unfortunate author of the *Five Hundred Pointes of Good Husbandrie*, one of the most pleasant and instructive poems of the time, tells us, that he was impressed from Wallingford college, in Berkshire, into the King's chapel. Soon after, by the interest of friends, he was removed to St. Paul's, where he received instructions in Music from John Redford, an excellent contrapuntist, and organist of that cathedral. There seems, however, to have been care taken of the general education of boys so impressed, as we find that Tuffer was sent from St. Paul's to Eton school, and thence to Cambridge. He afterwards tried his fortune in London about the Court, under the auspices of his patron Lord Paget, where he remained ten years; then he retired into the country, and embraced the occupation of a farmer, in the several counties of Suffex, Suffolk, and Essex; but not prospering, he procured a singing-man's place in the cathedral of Norwich; where he does not seem to have remained long before he returned to London. But being driven thence by the plague, he retired to Trinity college, Cambridge; returning afterwards, however, to the capital, he there ended his restless life in 1580; not, as has been said, *very aged*, if he was born about 1523 (i).

Records are still extant to prove that the immediate descendants of Henry VIII. continued the full exercise of this prerogative of impressing singers for the chapel royal.

1550. " A commission to Philip Van Wilder, Gent. of the
" privy chamber to Edward VI. (k), in any churches or chapels,

esting account of Tuffer and his writings.

(k) Philippe de Vuilde was a Flemish musician

“ or other places within England, to take to the King’s use
 “ such, and as many singing children or choristers, as he or his
 “ deputy shall think good (*l*).”

1551. A warrant was issued to Richard Gowre, master of the children of the King’s chapel, to take up, from time to time, as many children to serve in the chapel as he should think fit (*m*).

In the first year, however, of Edward’s reign, a privilege which had been granted by Henry VIII. to Windsor, exempting the singers of that chapel from being impressed for any other service, was renewed. Queen Mary confirmed this privilege likewise in the first year of her reign (*n*). And among the MSS. of the Ashmolean Museum (*o*), at Oxford, a copy of Queen Elizabeth’s warrant, of the same purport, is preserved entire (*p*), which is so curious, and different from the present spirit of our government, that I shall present it to the reader.

“ Eliz. R. Whereas our castle of Windsor hath of old been
 “ well furnished with singing men and children.—We willing it
 “ should not be of less reputation in our days, but rather augmented and increased—declare, that no singing men or boys
 “ shall be taken out of the said chapel by virtue of any commission,
 “ not even for our Household chapel. And we give power to
 “ the bearer of this *to take any singing men or boys* from any chapel, our own Household and St. Paul’s only excepted. Given
 “ at Westminster, the 8th day of March, in the second year of
 “ our reign.

“ Elizabeth R.”

This Princess, who relinquished no prerogative which had been exercised by her ancestors, kept in full force during her whole reign that of issuing placards or writs for impressing singing-boys for her chapel, as well in the capital as at Windsor. The original

musician, who settled in England; there is a *pater-noster* of his composition, *Libro quarto Ecclesiasticarum cantionum*, published at Antwerp, 1554. See the Museum Collection.

of

of one of these, signed by herself, being preserved in the Sloane Collection, British Museum (*q*), it seems to merit a place here; as it will not only manifest the care that was taken to supply the royal chapel with the best treble voices which could be found throughout the kingdom, but convey to the reader an idea of the state of our civil liberty during the sixteenth century.

By the Queen.

Elizabeth

WHEREAS we have authoris'd our servaunte Thomas Gyles, maister of the children of the cathedrall church of St. Paule, within our citie of London, to take up suche apte and meete children as are most fitt to be instructed and framed in the arte and science of Musicke and singing, as may be had and founde out within any place of this our realme of England or Wales, to be by his education and bringing up made meete and hable to serve us in that behalf, when our pleasure is to call for them. WEE therefore by the tenoure of these presents will and require you that ye permitt and suffer from henceforthe our said servaunte Thomas Gyles, and his deputie or deputies, and every of them, to take up in anye cathedrall or collegiate churches, and in every other place or places of this our realme of England and Wales, suche childe and children as he or they, or anye of them, shall find and like of, and the same childe and children, by virtue hereof, for the use and service aforesaid, with them, or anye of them, to bring away without anye your lette, contradictions, staye, or interruptions to the contrarie. CHARGE and commanding you, and everie of you, to be aydinge, helpinge, and assistinge unto the above named Thomas Gyles, and his depu-

tie or deputies, in and aboute the execution of the premisses, for the more speedie, effectuall, and better accomplyshing thereof from tyme to tyme, as you, and everie of you, doe tender our will and pleasure, and will answere for doinge the contrarie at your perille.

Yeven under our Signet at our Manour of Greenwich, 26 day of Aprill, in the xxvii yeare of our reign.

To all and singular Deanes, Provostes, Maisters and Wardens of Collegies, and all Ecclesiastical Persons and Ministers, and to all other our Officers, Mynisters, and Subjectes, to whome in this case it shall appertayne, and to everie of them greetinge.

Notwithstanding the attention that was paid to Choral Music by her Majesty, and the Deans of cathedrals throughout the kingdom, it was in frequent danger of utter abolition by the fury with which some of the reformers, actuated by a spirit of change and extirpation rather than of reformation, attacked every thing that was right, wrong, or even indifferent, in the ancient service of the church (r).

By the statute of the 27th of Henry VIII. cap. 15. 1536, the year of the suppression of the monasteries, power was given to the King to nominate thirty-two persons among the clergy and laity to examine all canons, constitutions, and ordinances, provincial and synodical, to compile a body of such ecclesiastical laws as should in future be observed throughout the realm. Nothing material, however, was done in this important work during the life of Henry; but in the next reign it was again taken into consideration, and a commission granted to eight Bishops, eight of the inferior clergy, eight civilians, and eight common lawyers, which constituted the *Ecclesiastical Court of Convocation*. The result of their debates was published under the title of *Reformatio Legum Ecclesiasticarum*, in 1571, by Fox, the martyrologist; and afterwards, in 1640, when the fury of religious disputation was at its height. But as these laws were framed during the violence of contention between the puritans and Roman catholics, and never

(r) One of Latimer's injunctions to the Prior and Convent of St. Mary-house, in Worcester, so early as the year 1537, when Bishop of that diocese, runs thus: "Item, Whenever there shall be any preaching

" in your monastery, that all manner of singing, and other ceremonies, be utterly laid aside." —

Burnet, P. ii. Collect. Rec. No. 23.

received the royal assent, they have been only had in remembrance from time to time for polemical purposes.

Reformation was doubtless at this time necessary, and sincerely wished by the most reasonable and truly pious Christians in the kingdom; yet the fanaticism with which it was carried on by others, made the lovers of Choral Music, who had a veneration for this part of the solemn service of the church, tremble for its safety during the compilation of these laws (s).

The reasonable complaints made in them against the abuse of Music, and those subtilties in *figurative melody*, which were then termed *curious singing*, are nearly the same as those of the Council of Trent, about the same time (t); and seem with equal wisdom and good taste to be levelled at the pedantry of operose Music and complicated measures, which not only rendered the words, but the Music, difficult to be comprehended. And the fears of those who wished well to our cathedral service were abated, on finding that the thirty-two commissioners had not wholly condemned Church Music, but confined their censures to that species of singing which was productive of confusion, and that rendered unintelligible those parts of the service which required the greatest reverence and attention.

In 1565, our ecclesiastical composers, encouraged, probably, by the reception of the former publication, and favour of the Queen, printed another collection of offices, with musical notes, under the following title: "Morning and Evening Prayer and Communion, set forth in foure Partes, to be song in Churches, both for Men and Children, with dyvers other Godly Prayers and Anthems, of sundry Mens doyns."

(s) Among the proposals prepared by the puritans for further reformation, 1562, there is one, "That the Psalms may be sung distinctly by the whole congregation; and that organs may be laid aside." Neal's *Hist. Purit.* p. 180. and Strype in *Ann.* Burnet likewise, P. iii. p. 103. tells us, that "Organs and *curious singing* were near being banished the church; their continuance being carried by only one vote, and that given by the proxy of an absent member."

(t) *Qua propter partitè voces et distinctè pronuntient, et cantus sit illorum clarus et*

aptus, ut ad auditorum omnia sensum, et intelligentiam proveniant; itaque vibratam illam, et operosam muscam, quæ figurata dicitur, auferri placeat, quæ sic in multitudinis auribus tumultuatur, ut sæpè linguam non possit ipsam loquentem intelligere. Reform. Leg. Eccles. Tit. Divinis Officiis, cap. v.

The Council of Trent, 1562, made a decree against curious singing, prohibiting, among other things, *L'uso delle Musich nelle chiese con mistura di canto, o suono lascivo, tutte le attioni secolari, colloquio profani, strepiti, gridori.* Hist. del Concil. Trid.

The

The musicians who contributed to this collection were Thomas Cawston, 27 Heath, Robert Hasleton, Knight, Johnson, Tallis, Oakland and Shepard. In order to gratify the musical reader's curiosity, I shall select from this publication the following composition by the admirable Tallis, as one of the most early to which I have seen his name prefixed in print.

A PRAYER.

Thos. Tallis.

This Contra Tenor is for Children.

This Meane is for Children.

This Tenor is for Men.

This Base is for Children.

The musical score is written for four voices: Contra Tenor, Meane, Tenor, and Base. The music is in G major (one sharp) and common time (C). The lyrics are as follows:

Heare the Voyce and Prayer of thy Ser-vaunts of
 Heare the Voyce and Prayer of thy Ser-vaunts of thy Ser-vaunts that they make
 Heare the Voyce and Prayer of thy Ser-vaunts that they make be fore
 before thee this Day That thyne Eyes may be o - pen toward this
 before thee this Day That thyne Eyes may be o - pen
 before thee this That thyne
 That thine Eyes may be o - pen toward this house night and day ever toward this
 house night and day this house Night and day ever toward this
 toward this house Night and Day Night and day ever toward this
 Eyes may be o - pen toward this house Night and Day ever toward this

The Bookes are to be folde at hys shop under the gate, 1565.

(a) Transcribed from a Printed Copy in the Possession of the Rev.^d Dr Monkhouse, Queen's Coll: Ox: and corrected from several Typographical errors.

The two publications by John Day, fixed for near a century the style of our Choral Music; of which the movement was grave, the harmony grateful, and the contrivance frequently ingenious. Yet, besides the censures of the puritans, modern times have often charged this kind of Music with obscuring the sense of what was sung, by too frequent fugue, as well as by an utter inattention to the accent and expression of the words. These imperfections, however, were not peculiar to the productions of our countrymen during the sixteenth century, but were general in the compositions for the church of every author, in every language, throughout Europe.

In 1570, Cartwright, one of the most violent and intolerant reformers, attacked Cathedral Music; and afterwards Field and Wilcox, two puritan ministers, and Brown. Against these the pious, learned, and excellent Hooker, then Master of the Temple, undertook its defence (x).

In 1571, in the confession of the puritans, they say, "Concerning singing of Psalms, we allow of the people's joining *with one voice* in a plain tune, but not of tossing the Psalms from one side to the other, with intermingling of organs (y). And in 1586, at the time that the puritans were framing innumerable bills of further reformation in the church, a pamphlet was dispersed, in spite of all the restrictions at that time laid on the press, entitled "*A Request of all true Christians to the House of Parliament;*" which, among other things, prays, "That all cathedral churches may be put down, where the service of God is grievously abused by piping with organs, singing, ringing and trowling of Psalms from one side of the choir to another, with the squeaking of chanting choristers, disguised (as are all the rest) in white surplices; some in corner caps and silly copes, imitating the fashion and manner of Antichrist the Pope, that man of sin, and child of perdition, with his other rabble of miscreants and shavelings (z)."

(x) See his *Eccles. Politie*, book v. sect. 38 and 39. Eulogium and defence of Church Music.

(y) Neal, p. 290.

(z) *Ib.* p. 480.

All this fanatical cant was greatly discountenanced by the Queen, though it was wholly out of her power, extensive as it was, to suppress the levelling principles of these enemies to all elegance and comfort; whom nothing less than the utter subversion of Church and State, which they effected in the next century, would satisfy.

Having shewn the manner in which Figurative Music was established in our cathedrals, during the reign of Queen Elizabeth, it now remains to trace the origin and progress of METRICAL or PAROCHIAL PSALMODY, different from the plain-song, or chanting, of cathedrals and collegiate churches.

Singing of this kind, among the reformers and schismatics, seems in all ages to have been the favourite mode of addressing the Divinity: for not only the Arians practised it in their processions (a), but the Albigenes, who may be called the first protestant martyrs (b); and who, according to ecclesiastical writers, when Simon Montford, their persecutor, in 1210, had lighted a pile of wood for their destruction, precipitated themselves in the flames, to the number of a hundred and forty, *singing Psalms* (c).

The disciples of Wickliff, in England, during the fourteenth century, and those of John Huss and Jerom of Prague, in the fifteenth, were Psalm-singers; and the Hymn Book of the Picards, and Bohemian brethren, printed with musical notes, at Ulm, 1538,

(a) See Vol. II. p. 7.

(b) The term *Protestant*, however, did not subsist till the year 1529, when it was given to such as adhered to the doctrines of Luther; because the chiefs of his party *protested* against the decree of the Diet of Spire, made the same year by Ferdinand, Archduke of Austria, and other catholic Princes.

(c) The sect of Waldenses had its rise in the twelfth century; its errors were first condemned in the Council of Thoulouse, 1119. Can. 2. Again in the Council of Lateran, 1139. And in the Council of Tours, 1163. About the end of this century the disciples of Peter Valdo, called *Vaudois*, *Waldenses*, and the poor of Lyons, joined these heretics. And all the several

sects were called by the general name of Albigeois, from the city of Albi, where they were established. The first crusade against the Albigenes was published 1210. The inquisition for extirpating the whole sect was established at Thoulouse, 1229. And in 1233, they seem to have been totally destroyed, except a few that had escaped, and joined the Waldenses in the Valleys of Piedmont, France, and Savoy. There they persevered in their opinions till the time of Zwingle, to whom they sent deputies, desiring him to become their chief. Zwingle, who was a Swiss by nation, born 1487, perished by the sword, while he was fighting valiantly at the head of his sect, 1531, in support of his religious opinions.

shews,

shews, that the melodies used by these sects originated from the chants to which the ancient Latin hymns of the Romish church were sung (*d*). For in this book there are translations and imitations in German metre of most of the hymns and proses still used in the Romish church: such as the *Stabat Mater dolorosa*; *Te Deum laudamus*; *O lux beata Trinitas*; *Pange lingua gloriosi*, &c. Some of these melodies indeed are in triple time, which never is the case in canto fermo, or cathedral psalmody (*e*). But *Stabat Mater*, and *O lux*, in this book, are set to old Romish chants, and *Te Deum* to the same that is inserted in the preface of Meibomius to the ancient Greek musical writers, as the most ancient melody which the church has preserved (*f*).

Among the first reformers who interested themselves about the manner of performing the Psalms, we have not only Wickliff, Huss, Jerom of Prague, and Zuingle, but Luther, Cranmer, Calvin, Beza, Buchanan, and John Knox; who, though each of them had different ideas on the subject of Sacred Music, yet they agreed in stripping it of all the energy and embellishments of measure and melody, as indeed the Calvinists did likewise of harmony. Nor were the original institutes of psalmody more favourable to Poetry than Music; for by giving to each syllable, whether long or short, a note of the same length, all prosody, rhythm, and numerical cadence, are destroyed. And however beautiful the poetical measures may be to read, when sung in this drawling and isochronous manner, they not only afford the ear no pleasure, but become unintelligible.

The bold and intrepid reformer, LUTHER, was the first who shook the Papal Throne, and had sufficient abilities and address to gain proselytes to his doctrines among the Princes of his country.

(*d*) Ein hübsch new Gesang buch, &c. or, *a fine new Hymn Book*, "containing the Usage of the Church, and the Hymns belonging to the country of Fulneck, in the kingdom of Bohemia, and by the Christian brotherhood of the sect called PICARDS, who have hitherto been reckoned heretics, and anathematized as unworthy of salvation. By these the following Hymns are sung, to the ho-

"nour and glory of God." I was favoured with this scarce and curious book by my honoured friend, Mr. Emanuel Bach, at Hamburg, from the collection of his father, the celebrated Sebastian Bach.

(*e*) See fol. ix. xiii. xxviii. &c. of this Hymn Book.

(*f*) See Vol. II. of this Hist. p. 530, et seq.

as well as the people. No religion is ever firmly established till embraced by the Sovereign, and supported by government. The Christians were not only oppressed and persecuted for more than three centuries, but regarded with horror, till the conversion of Constantine. Luckily for Luther, preaching against the sale of indulgencies, Peter-pence, celibacy, monasteries, and papal tyranny in general, coincided with the interest of the Nobles, and power of the Prince. His opinions, therefore, in spite of imperial authority, catholic zeal, and persecution, were adopted with greater rapidity in the northern parts of the world, than those of Mahomet had been in the south (*g*).

With respect to Music, Luther, being himself a judge and lover of the art, was so far from banishing it from the church, that he rather augmented the occasions for its use (*b*). Indeed Luther must have had an insatiable passion for Poetry, or at least for rhyme, and Music; as, besides translating, himself, most of the ancient ecclesiastical hymns, the creed, Lord's prayer, and many other parts of his Liturgy, into German verse, in order to be sung, he wrote his catechism in verse, which was set to Music, in four parts, by Henry of Gottingen; and even the confession of Augsberg was *done* into verse, and likewise set to Music (*i*).

It

(*g*) Luther began to preach against indulgencies 1517. In 1520, he and his doctrines were anathematized by Leo X. after which he published his *Captivity of Babylon*. In 1521, his writings were burnt at Rome, and the Pope's bulls and decretals at Wittemberg. In the same year he pleaded before the Imperial Diet, at Worms, contrary to the advice of his friends, who told him, that he would share the same fate as John Huss and Jerom of Prague, who were both burned for heresy; when he protested, that "if he were certain there were as many devils at Worms, as tiles on the houses, he would still go thither." (*Hayne's Life*, p. 34.) The same year he procured the abolition of the ancient mass at Wittemberg. In 1523, Lutheranism was established in Denmark and Sweden; and in 1525, in Saxony, Brunswic, Hesse,

Straßburg, and Francfort. In 1530, the Confession of Augsberg was presented; and before his death, which happened in 1546, his doctrines were received in almost every part of the German empire, except Austria and Bavaria.

(*b*) Henry VIII. who began, and his children who finished the reformation of religion in England, being likewise delighted with Music, and able to distinguish harmony and melody from noise and jargon, took care to support its dignity in the service of our cathedrals; which has not been the case with the founders of other protestant sects.

(*i*) In Luther's epistle to Senfelius, of Zurich, the musician, and scholar of Henry Isaac, he places Music above all arts and sciences, except theology, as that and religion are alone able to soothe and calm the mind.

It appears that the ancient ecclesiastical tones still regulated the Music of the Lutheran church at the time of the reformation; and most of the old melodies to the evangelical hymns are composed in some of them (*k*). The **Cantaten**, or anthems and services of this reformed church, in the German language, are, however, as elaborate and florid as the motets to Latin words, used in Italy during the celebration of the mass. But in the *Hymnologia*, and metrical psalmody of this, as well as all other protestant churches, there seems to have been one common principle, totally inimical to Poetry, which is that of destroying all quantity, and distinction of syllables, by making them all of the same length (*l*). The modern Methodists, indeed, have introduced a light and ballad-like kind of melody into their tabernacles, which seems as much wanting in reverence and dignity, as the psalmody of other sects in poetry and good taste.

Music, in itself an innocent art, is so far from corrupting the mind, that, with its grave and decorous strains, it can calm the passions, and render the heart more fit for spiritual and pious purposes; particularly when united with language, and the precepts

mind. In the same epistle Luther says, "We know that Music is intolerable to demons." *Scimus Musicam dæmonibus etiam invisam & intolerabilem esse*; and therefore thus concludes: "I verily think, and am not ashamed to say, that, next to divinity, no art is comparable to Music." *Planè judico, nec pudet asserere, post theologiam esse nullam artem, quæ possit Musicæ æquari.*

(*k*) It was by degrees that the Latin language gave place to the German in the Lutheran Liturgy. Concerning the Lord's Supper he says, (To. II. Ep. p. 72.) "I wish the mass might be used in the mother tongue, rather than promise it, as it is not in my power, being a matter requiring both Music and Spirit." He first celebrated the mass in the German language, 1525, as he himself says, (To. II. Ep. p. 301.) "This day we attend the Prince's command, the next Lord's Day we will publickly sing in the name of Christ; and mass shall be in the mo-

ther tongue for the lay people. But the daily service shall be in Latin, however we will have the lessons in the vulgar tongue." Yet the Psalms, and ancient chants of the Romish church, were still long retained in the Lutheran service, as appears by a book with the following title: *PSALMODIA, hoc est cantica sacra veteris ecclesiæ selecta, per Lucam Löffium collecta, cum præfatione Phillippi Melancthonis. Wittebergæ, 1561.* No German Liturgy, *Agenda*, or *Kirchenordnung*, for this sect, appears to have been printed during the life of Luther. The most ancient I can find in Draudius is the *Agendbuchlein der Kirchen, zu Basil & Mulhausen, 1565.* Becken printed at Leipzig, 1621, the *Psaltry of David*, in the German language, with the melodies used in the Lutheran church.

(*l*) "These equal syllables alone admire,
Though oft the ear the open vowels
tire."

Pope's *Essay on Criticism*, v. 344.

of religion. It has already been said (*m*), that "Music, considered abstractedly, is in itself a language;" and we may add, that it is more universally understood by mankind in general, whose nerves vibrate in unison with its selected tones, than any other language among all the dialects of the earth. That articulation must be rough and violent indeed, which, without singing, can easily be comprehended in buildings so vast as some of the Christian churches; in such, it is the *spirit*, not the *letter* of supplication or thanksgiving which must employ the mind (*n*). St. Paul says, "I will sing with the *spirit*, and I will sing with the *understanding* also (*o*)."
And in this sense, even Instrumental Music, without words, if composed with propriety, and performed with reverence, seems worthy of a share in sacred rites. As there never was a national religion without Music of some kind or other, the dispute concerning that which is most fit for such solemnities, is reduced to one short question: If Music be admitted into the service of the church, is that species of it which the most polished part of mankind regard as *good*, or that which they regard as *bad*, the most deserving of such an honour?

That Metrical Psalmody, in slow notes of equal length, had its origin in Germany, and was brought thence by reformers to other parts of Europe, is demonstrable: for the 128th Psalm, *Beati omnes qui timent Dominum*, had been translated into German verse, in order to be sung in this manner, by John Hufs, in the beginning of the fifteenth century; which translation was afterwards modernized in the same measure, and to the same tune, by Luther (*p*). And the same melody which we sing to the 100th Psalm, is not only given to the 134th, in all the Lutheran Psalm-books, but by Goudimel and Claude Le Jeune, in those of the Calvinists; which

(*m*) See Vol. II. p. 171.

(*n*) Indeed speech itself, when very loud and slow, becomes singing: that is, each syllable is rendered a musical tone, which may be fixed, and its unison found in a musical instrument of the same pitch. As may be proved in calling very loud to any one at a distance.

(*o*) 1 Cor. ch. xiv. ver. 15.

(*p*) John Hufs was likewise the author of the German Easter Hymn, *Jesus Christus unser heiland*, &c. which was also modernised and re-published by Luther, 1525, and from which the modern Methodists have taken the Easter Hymn, "Jesus Christ is risen to-day," &c. Luther has *Herre eleu n* for the burden of his hymn, instead of *Hallelujah*.

nearly

nearly amounts to a proof that this favourite melody was not produced in England. It is said to have been the opinion of Handel, that Luther himself was its author; but of this I have been able to procure no authentic proof. Tradition, however, gives to this celebrated Heresiarch, as he is called by the Roman catholics, several of the ancient melodies which are still used in Germany: particularly the following psalm and hymn tunes, that are preserved in the Choral and *Gesang Büchern*, and still sung in all the Lutheran churches(*q*).

P S A L M CXXVIII.

First translated into German by John Hufs, and afterwards modernised and set to Music by Martin Luther.

Seelig ist der gepreiset, &c.

(*q*) The 30th Psalm was the first which Luther versified; then the 12th, 46th, 14th, 53d, 67th, 124th, and 128th, which last Hufs had done before, and it was only modernised by Luther. The following are the titles of the three first Psalm and Spiritual Song books which he published at Wittemberg:

I. ENCHIRIDION, or *Ellich Christlich lieder, und Psalm, &c.* 1524.

II. *Elliche Christliche Geisenge und Psalmen*, with a preface by Luther, 1525.

III. *Geysiliche Geisenge*.—"Spiritual Songs, which (*blessed be God*) are sung in the Church, taken from the sacred writings of the true and holy Evangelists." Wittemberg, 1525, with the same preface as that to the preceding publication. To this he prefixes his name.

It has been erroneously imagined by Sir John Hawkins, Vol. III. p. 447, and Mr. Warton, Vol. III. p. 165, that no Psalms or Hymns in the vulgar tongue were used in the church, or printed in Luther's time, and that Clement Marot's Psalms were the

first of the kind with which France and Germany were instantly infatuated: For, besides the numerous Hymns and Metrical Psalms of Luther and his friends, there was a complete translation of the Psalms published at Augsburg, in German verse, 1523, by John Boschenstein, under the title *Psalter des Königlichhen Propheten Dawids geteutschet, &c.* "The Psalter of the Royal Prophet David, Germanized," &c. *Kunstgeschaffte Historie der Hymnop.* p. 20.

It does not appear in the Life or Letters of Luther and Calvin, that these reformers had ever conferred or corresponded together; and yet Mr. Warton, Vol. III. p. 164, says, that it was by the "advice of "Luther," that Calvin established his Psalmody, with which both Germany and France were soon over-run. Germany was certainly furnished with innumerable Psalm-modists and Hymnologists long before Calvin, who was born 1509, became the head of a sect. He was but thirty-six when Luther died.

But keeps his steps confin'd with care, to his ap--pointed ways. He shall up-

on the sweet re--turns of his own la-bour feed; without de-pendance live and

see his wish-es all suc-ceed.

Original Melody to the Easter Hymn, as sung by the Followers of John Hufs and Martin Luther; from Müller's Psalmen und Choral-Buch, printed at Franckfort on the Mayne, 1754.

Jesus Christus unser hei--land Der den tod über-

wand, Ist auf-erstan--den, Die sünd hat er ge - fan-gen, Ir-

Hymn written, set to Music, and sung by Luther, at his Entrance into Worms, whither he was summoned to plead before the Emperor, 1521.

H Y M N.

werden, und sie zu Gott be - ke - ren.

If Metrical Psalmody can ever be tolerated and defended, it must be in favour of such venerable melodies as these; which, when cloathed in good harmony, have a solemnity of effect, that totally precludes every idea of secular Music.

When

When Luther published Psalms in the German tongue, and introduced them into the church, he wrote to Spalatinus, 1524 (r), informing him, that he intended, according to the example of the prophets and ancient fathers of the church, to make Psalms or spiritual songs for the common people, that the Word of God might continue among them in Psalms, if not otherwise. "We seek for poets," says he, "where we may.—I cannot perform the work so neatly as I would, and therefore desire you to try how near you can come to Heman, Asaph, or Jeduthun (s)." What he says concerning ceremonies is liberal: "I condemn no ceremonies but those which are contrary to the Gospel (t)." And when he speaks of human learning, his sentiments must be allowed to be still more enlarged: "I am persuaded," says he (u), "that Theology could not be kept wholly sincere without the skill of other arts. For formerly, when the knowledge of other learning was decayed or despised, Theology fell to the ground, and remained in a miserable state. Nay, I perceive that the revelation of God's Word would never have become so glorious, unless arts and languages had been sufficiently cultivated, to prepare the way for divinity, as John the Baptist did for Christ.—I think they are extremely mistaken who imagine the knowledge of philosophy and nature to be of no use to religion."

Not so the gloomy, stern, and inflexible CALVIN; whose doctrine was so rigid and comfortless, that he seems to have shut up local monasteries, merely to make *Carthusians* of all mankind. The Reformation, indeed, had been established at Geneva in 1535, a year before the arrival of Calvin in that city; that is, the Bishop was deposed, and the opinions of Zwingle or Luther were generally received. But these innovations would not satisfy the new reformer, who, on his return, determined not only to strip the church of all its ancient rites and ceremonies, but the inhabitants of all religious liberty. For in establishing a form of

ecclesiastical

ecclesiastical discipline and jurisdiction, he ordered disobedience to be punished with censures, pains, excommunication, and even death, in the case of Servetus; to which, though it bred much disturbance in the city, and offended many, as worse than Papal tyranny, he firmly adhered (x).

When Calvin first arrived at Geneva, 1536, the inhabitants, unsettled in their belief, and agitated like chaff in a whirl-wind by difference of opinion (y), agreed in nothing but the determination to get rid of popery. The reformer, during this contentious disposition, refusing to administer the sacraments, was ordered to depart, and did not return till 1541.

The only amusement which Calvin seems ever to have allowed his followers was *Psalmody*, and that of the most unmeaning and monotonous kind; without harmony, variety of accent, rhythm, and most of the constituent parts of mere melody. Not a musical instrument was suffered within the walls of Geneva for more than a hundred years after the Reformation; and all Music, except this Metrical Psalmody, was proscribed wherever the doctrines of this reformer were received. The inhabitants of Iceland, so celebrated for the Poetry and Music of the SCALDS, whose souls, in spite of the rigour of the climate, seemed to glow with as great a love for those arts as the bards of ancient Greece, were eternally silenced and *glacés* by the comfortless religion of Calvin (z).

The

(y) Which *di qua, di là, di qui, di su, gli mena*. Dante *Inf.* V. 44.

(z) The learned seem to agree, that the Scalds of this country were the first cultivators of Poetry and Music among the moderns; nor can a better reason, perhaps, be assigned, why these arts, which were formerly in such high estimation among the people of this bleak and rugged region, should be totally discountenanced and banished at present, than that of their having been regarded with horror by the puritanical disciples of Calvin; who have thus deprived the more than half-starved inhabitants of an innocent amusement, which might have helped at least to alleviate

wretchedness, and make their existence somewhat less like that of the sinners with Count Ugolino, in Dante's infernal ice-house:

*Eran l'ombre dolenti nella ghiaccia,
Mettendo i denti in nota di cicogna.
Ognuna in giù tenea colta la faccia:
Da bocca il freddo, e dagli occhi'l cuor
tristo*

Tralor testimonianza si procaccia,
Sir Joseph Banks and Dr. Solander, when they visited this island in 1773, brought thence a very ancient musical instrument, of a narrow and long form, which used to be played on with a bow; and of which they did me honour to make me a present. It is called by the natives the

LONG-

The Metrical Psalmody which John Hufs, the Bohemian brethren, and Martin Luther, published in the German language for the use of the common people, was soon imitated in other countries. The celebrated poet, Clement Marot, in France, having, about the year 1540, versified and dedicated to Francis I. about thirty of the Psalms, from a prose translation by the famous Hebrew Professor Vatable, they soon acquired such favour at Court, as to be sung, in spite of the censures of the Sorbonne, by the King, Queen, and chief personages of the kingdom, to the tunes of the most favourite songs of the times (a). Marot, who had long been suspected by the catholics of heresy, and once thrown into prison for his religious opinions, fearing new persecution, flew to Geneva, where he put into French verse twenty more of the Psalms. These, with the thirty that had been published at Paris, were printed at Geneva in 1543, with a preface by Calvin himself, but without Music. Marot dying the next year, Theodore Beza versified the rest of the Psalms in the same manner, and the whole hundred and fifty were published at Strasburg, in 1545. Bayle (b) says, that during the whole sixteenth century there was no French poetry that approached the salt and natural grace of that with which Marot furnished it. And Menage says (c), that the French owe the *Rondeau*, the *Madrigal*, and modern form of the *Sonnet*, to this poet, who first confined himself to the mixture of masculine and feminine rhymes, though he did not always

LONG-SPIEL, and has four strings of copper, one of which is used as a drone. Pieces of wood are placed at different distances upon the finger-board to serve as frets. Though this individual instrument has the appearance of great antiquity, yet, rude and clumsy as it is, there can be no doubt but that it was still more imperfect in its first invention. For to have placed these frets, implies some small degree of meditation, experience, and a scale; and as to the bow, that wonderful engine! which the ancients, with all their diligence and musical refinements, had never been able to discover, it seems, from this instrument, to have been known in Iceland at least as early as in any other part of Eu-

rope. Sir Joseph Banks and Dr. Solander, when they found the LONG-SPIEL on the island, had very great difficulty in discovering a person among the inhabitants who either could, or would, dare to play on it. At length a wicked Iclander was found, who being rendered more courageous and liberal than the rest by a few glasses of generous gin, ventured, in secret, to exhilarate these philosophers — with a Psalm-tune.

strictly

strictly adhere to their alternate use, as a law. The sale of his fifty Psalms was so rapid, that they could not be printed fast enough to supply the public demand for them; more than ten thousand copies having been sold in a very short time. When those of Beza were added to them, their favour still continued, and they were sung not only by the Lutherans and Calvinists, but the Roman catholics. As yet, indeed, they had never been used in the conventicles of the sectarists, but in private, merely as moral and spiritual songs, to secular tunes, such as were easy to learn, and play on viols, and other instruments.

It was not till the year 1553, when these Psalms appeared in the same book as the Catechism of Calvin, and the Genevan Liturgy, that the catholics took the alarm, and prohibited the further publication and use of them. After which, to sing a Psalm in France was a declaration of heretical principles, and PSALMODIST became another name for *Reformer*, *Huguenot*, and *Calvinist* (d). Indeed, the purposes to which this lamentable Music was often applied, during the struggles and growth of Calvinism, seems to have been worse than the Music itself, as, according to writers of the opposite party, it was made the signal of tumult, sedition, sacrilege, and rebellion (e).

After

(d) Flor. de Remond, *ubi supra*. Des Maizeaux says, that the French protestants had other Metrical Psalms in their church-service before those of Clement Marot and Theodore Beza; but neither he nor Bayle seems to know that these were mere translations of the German Psalms and Hymns, by Hufs, Luther, and others; as appears by the fragments given in Bayle's *Dictionary*, article, *Marot*. These were probably sung to the same tunes at Zurich and Geneva as in Germany.

(e) Maimburg (*Hist. du Calvinisme*, liv. ii. p. 96), says, that after the French had lost the battle of St. Quintin, 1557, the Huguenots taking advantage of this public calamity, held their assemblies in open daylight in the most public streets of Paris, where they met in great bodies, to roar out the *Psalms* of Clement Marot.

Mezerai (*Hist. de France*, Tom. II. p. 1139, Fol.) says, that the protestants rejoiced so much at the death of Henry II. in 1559, that they composed *Hymns*, *Songs*, and *Thanksgivings* to God, on the occasion.

And Strada (*De Bello Belgico*, lib. iii.) gives several instances of the seditious use of Psalmody in the Low Countries a few years after the publication of Marot's version. About the year 1562, he says, that two French Calvinist preachers, in the night, the one at Valenciennes, and the other at Tournay, assembled a great croud in the market-place, to whom they recommended their new Gospel, in a long fanatical discourse; and when they had done, they were followed through the streets by the multitude *singing David's Psalms* in French. In another part of his work, (lib.

After this account of the poetry and use of Marot's Psalms, previous to their reception into the church, it seems necessary to speak of the Music to which they were first set for that purpose. It has been long generally imagined, that Lewis Bourgeois and Claude Goudimel were the first who composed the melodies to which these Psalms were sung in the church of Geneva; but this is no otherwise true, than that they set different parts to them: and Bayle says (*f*), "I am surpris'd that De Pours, in his *Divine Melodie du Saint Psalmiste*, makes no mention of him who first composed the common tunes to the Psalms of Clement Marot, that are used in the church of Geneva; for they have never been sung there in different parts. A professor in the university of Lausanne," continues he, "has informed me, that a certificate under Beza's own hand, in the name of the ecclesiastical society, still subsists, for GUILLAUME FRANC, dated 1552, declaring him to have been the first who set Music to the translation of the Psalms, as they are sung in churches." He is likewise acknowledged to be the author of that Music in a Geneva edition of 1564: so that though Louis Bourgeois set eighty-three Psalms to Music in four, five, and six parts, which were printed at

(lib. v.) he says, that on the 21st of August, 1566, the heretics came into the great church at Antwerp with weapons concealed under their cloaths, as if they were resolved, after the slight skirmishes which had happened for some days past, to come to a battle; and waiting till vespers were over, they shouted with a hideous cry of "Long live the *Gheuses*," a name which they had taken at a drunken-bout, to distinguish their faction by. Nay, they commanded the image of the Blessed Virgin to repeat their acclamation, in which, if she refused to comply, they madly swore they would beat and kill her. And though John Immerfelijs, the prætor of the town, with some apparitors, ordered them to keep the peace, they would not listen to him; and well-meaning people running away to get out of the tumult, the heretics shut the doors after them, and like conquerors possessed themselves of the church; where finding no resistance, when the clock struck

the last hour of the day, and the darkness increased their confidence, one of them, in order to give formality to their wickedness, began to sing a Geneva Psalm. And then, as if a trumpet had sounded a charge, the spirit moving them all together, they fell upon the effigies of the mother of our Saviour, and upon Christ himself, and his Apostles; some tumbled them down, and trampled on them; others thrust swords into their sides, or chopped off their heads with axes; broke the picture frames, defaced the painted walls, demolished the organs and ancient painted windows, threw down the statues from their niches and pedestals, and committed every possible violence, outrage, and impiety, even to the greasing their shoes with the chrism or holy oil, and getting drunk with the consecrated wine, which they found in the vestry prepared for the altar.

(*f*) *Art. Marot.*

Lyons, 1561; and Goudimel set the whole psalter of Marot, in four parts, which was printed at Paris, 1565, by Adrian Le Roy and Robert Ballard; yet, as the Psalms are there said to be set *en forme de mottets*, or Anthems, they seem to have been of too elaborate a species of composition for the conventicles of Calvin, where it is thought necessary for the whole congregation to be on a level; and where, if one singer were degraded by having a *lower* part assigned him than another, it would destroy that entire *equality of condition*, upon which the happiness of these solitary sons of liberty so much depends.

The chronology, therefore, of Calvinistical Psalmody, seems to be this: Zwinglius, the chief of the protestants in Switzerland, before the arrival of Calvin at Geneva, had introduced among them the same kind of metrical psalmody as John Hufs and the Bohemian brethren had recommended to their followers in Germany; and this seems to have been continued till the year 1543, when the Psalms of Clement Marot, with a preface by Calvin himself, were first published at Geneva (*g*), with the single melodies of Guillaume Franc (*b*), an obscure musician, if such he may be called, whose name has never had admission in any catalogue of books, or been prefixed to any musical publication that I have been able to discover. Ever since that time it has been upon these melodies, which perhaps the German protestants had used before, that Bourgeois, Goudimel, Claude Le Jeune, and many other able harmonists, have worked, in constructing parts to them, either in plain or florid counterpoint.

The eighty-three French Psalms which Louis Bourgeois set in four, five, and six parts, were printed both at Paris and Lyons, in 1561, with a royal privilege (*i*).

The

(*g*) Jeremie De Pours, *Divine Melodie du Saint Psalmiste*, p. 570.

(*b*) Theodore Beza, *Voyez l'Art. Marot, Dict. de Bayle*.

(*i*) This author published at Geneva, 1550, *Le droit Chemin de Musique*. And in the patent of Charles IX. for printing the Psalms of Marot at this time, it is said, not

only that "they are translated according to the true Hebrew text, and put into good French ver'e," but "*good Music*, as persons of profound learning in the said languages, as *well as in the Art of Music*, who have examined them, allow." This honourable testimony in favour of the Music seems to belong to that of

The success of Clement Marot, in versifying the Psalms, excited so much emulation in other rhymers of inferior abilities, either to put the Psalms into metre, or write religious hymns in imitation of them, under the title of *Chansons Spirituelles*, that the kingdom of France seems at this time to have abounded in them, even to satiety. Nor was this species of psalmody confined to the Huguenots; the catholics seem at first to have been equally zealous in its cultivation (*k*).

Among the most celebrated composers of Music to Calvinistical Psalms and Spiritual Songs, must be ranked CLAUDE GOUDIMEL, a musician, of Franche-Comté, who seems to have lost his life at Lyons, on the day of the massacre of Paris, for setting the Psalms of Marot. Goudimel has been much celebrated by the Calvinists in France for this Music, which was never used in the church of Geneva, and by the catholics in Italy, for instructing Palestrina in the art of composition, though it is doubtful whether this great Harmonist and Goudimel had ever the least acquaintance or intercourse together. He set the *Chansons Spirituelles* of the celebrated Marc-Ant. De Muret, in four parts, which were printed at Paris, 1555. We may suppose Goudimel, at this time, to have been a Catholic, as the learned Muret is never ranked among heretics by French biographers. Ten years after, when he set the Psalms of Clement Marot, this version was still regarded with less horror by the catholics than in later times; for the Music which Goudimel had set to it was printed at Paris by Adrian Le Roy, and Robert Ballard, with a *privilege*, 1565. It

of Louis Bourgeois, published at a time which exactly agrees with the date of the patent, as appears by the following article in Draudius, *Bibl. exotica*, p. 208: Loys Bourgeois: *Psalmes 83, de David en Musique, à 4, 5, & 6 parties, à Paris, chez Ant. Le Clerc, 1561*; a publication which seems to have escaped Du Pours, Bayle, and Des Maizeaux.

(*k*) Certon, master of the boys at the Holy Chapel, at Paris, set and published thirty-one Psalms of David, in four parts, 1545; and Rinvoysy, master of the boys in the Cathedral of Dijon, about the same time set all the Psalms in four parts. These

two composers must have been Roman Catholics, as several others seem to have been, by the licence they obtained for publishing their Psalms and Spiritual Songs at Paris during the civil war, occasioned by religious encroachments and persecutions. The authors, therefore, of the following publications must certainly be ranked among Catholic Psalmòdists: *Contrepoisons des LII. Chansons de Marot, intitulées Psalmes; à Rouen, 1560.* And *Plaisans et Armonieux Cantiques de Devotion, qui sont un second Contrepoison aux LII. Chansons de Clement Marot, à Paris, 1561.* Draud. *Libri Gallici*, p. 187.

was reprinted in Holland, in 1607, for the use of the Calvinists, but seems to have been too difficult; for we are told by the editor of the Psalms of Claude Le Jeune, which were printed at Leyden, 1633, and dedicated to the States-General, that, “in publishing
“the Psalms in parts, he had preferred the Music of Claude Le
“Jeune to that of Goudimel; for as the counterpoint was simply
“note for note, the most ignorant in Music, if possessed of a voice,
“and acquainted with the Psalm-tune, might join in the per-
“formance of any one of them; which is impracticable in the
“compositions of Goudimel, many of whose Psalms being com-
“posed in fugue, can only be performed by persons well skilled in
“Music (1).”

CLAUDE LE JEUNE, of whom some account will be given elsewhere, had but few of his works printed during his life. The first book of his *Melanges*, in 6 parts, published at Antwerp, 1585, and his *Dodecachorde*, or twelve Psalms of David, according to the twelve ancient modes, 1598, are all the works, except detached motets and songs, of this author, that I have been able to find, which were not posthumous. A second book of his *Melanges*, 1612; his Psalms of simple counterpoint, in four and five parts, 1627; and his *Octonaires de la Vanité & Inconstance du Monde, à trois & quatre parties*, were published after his decease, by his sister Cecilia Le Jeune, and his nephew. Of his Psalms I have three editions, printed in different forms, and in different countries: for though, according to Bayle, they have never been sung in the church of Geneva, yet, in Holland, and in France, before the revocation of the edict of Nantz, as they were universally sung in Calvinistical churches and conventicles, except at Geneva, they went through more editions perhaps than any musical work since the invention of printing.

Claude Le Jeune was, doubtless, a great master of harmony, which no judge of musical composition, who takes the trouble to score his Metrical Psalms in plain counterpoint, will dispute. The

(1) A work, entitled, *La Fleur des Chansons des deus plus excellens Musiciens du Temps*,

ORLANDE LASSUS & CLAUDE GOUDIMEL, was published in France, 1576.

following

following is the Music he has set to the 134th Psalm of the French version; in the *taille*, or tenor part of which, is the old melody of our 100th Psalm.

HARMONY to the HUNDREDTH PSALM-TUNE, by
CLAUDE LE JEUNE.

Edition of Leyden, 1635.

The manner in which he first set twelve of the Psalms, in four and five parts, that were dedicated to the Duke de Bouillon, 1598, at that time head of the French protestants, very much resembled the style in which our old masters used to write upon a plain song: as one of the parts is continually singing an ancient melody or well-known Psalm-tune, while the rest are discanting, or singing in florid counterpoint upon it. In some of these, as well as his posthumous works, under the title of *Second Book of Melanges*, 1612, and *Oëtonaires de la Vanité et Inconstance du Monde*, 1641, besides fine harmony, there is great merit and ingenuity in the melody and contrivance.

Having traced *Metrical Psalmody*, in modern languages, from its minute beginning in Germany, Switzerland, and France, it is time to relate its arrival and progress in England, during the sixteenth century.

Several of the Psalms were translated into English metre during the reign of Henry VIII. by Sir Thomas Wyatt, and printed 1549. The Earl of Surrey wrote a sonnet in their praise, and translated others himself; but both his version and that of Wyatt are

are lost (*m*). Indeed almost all our poets, good and bad, have attempted to translate, or rather versify, the Psalms; but for want of success in this, as well as in writing original hymns, or sacred songs, Dr. Johnson has admirably accounted in his *Life of Waller* (*n*).

In the Act of Uniformity for the use of the Common Prayer in English, 1548, there was a *proviso* for the *singing* of *Psalms* and *Prayers* taken out of the Bible, “which were much sung by all who loved the reformation;—at which time some poets, such as the age afforded,” says Bishop Burnet (*o*), “translated David’s Psalms into verse; and it was a sign by which men’s affections to that work were every where measured, whether they used to sing these, or not.”

Singing Psalms in public, says Strype (*p*), had been customary among the gospellers, according to the manner of the protestants, in other countries; yet without any authority. This practice was now authorised by virtue of a proviso, which ran in this tenor: “Provided also, that it shal be lawful for al men, as wel in churches, chapels, oratories, or other places, to use openly any Psalm or Prayer taken out of the Bible, at any due time; not letting or omitting thereby the service, or any part thereof mentioned in the said book.” Hence it is that in the title page of our present books, the Hymns and Psalms in metre carry these words: “Set forth and allowed to be sung in all churches of all the people together before and after morning and evening prayer, and also before and after sermons; and moreover in private houses, for their godly solace and comfort.” Which may serve to explain to us, what the ordinary times of their singing together these Psalms were: namely, before they began the morning service, and after it was don. Likewise, when there was a sermon, before it began, and after it was finished (*q*). As

(*m*) See Warton’s *Hist. of Engl. Poetry*, Vol. III. p. 39

(*n*) Vol. I. p. 109. 1st edit.

(*o*) *Hist. of the Reform.* Part ii. p. 94.

(*p*) *Memorials*, Vol. II. p. 86.

(*q*) This is nearly the Genevan formulary, and that of Scotland, now; as it was that of the puritans at all times.

“ for the Psalms or Hymns thus allowed, they seem to be those
 “ that are yet set before and after our present singing, don by Dr.
 “ Cox, W. Whittingham, Robert Wisdome, eminent divines in
 “ those times, and others; and some of David’s Psalms, don by
 “ Sternhold, Hopkins, and others. It is certain that Sternhold
 “ *composed* several at first for his own solace (*r*). For he set and
 “ sung them to his organ. Which Music King Edward VI. some-
 “ time hearing, (for Sternhold was a Gentleman of his privy
 “ chamber), was much delighted with them, which occasioned his
 “ publication and dedication of them to the said King. After,
 “ when the whole book of Psalms, with some other Hymns, were
 “ completely finished in verse, (don, as it seems, by Hopkins, and
 “ certain other exiles in Queen Mary’s reign), this clause in the
 “ aforesaid act gave them then authority for their public use in the
 “ church hitherto (*s*).’

Heylin’s account of the introduction of Metrical Psalmody agrees with that of Strype in most particulars; yet he, and almost all writers on the subject are mistaken in asserting, that “ it was a device first taken up in France by one Clement Marot;” for it has already been shewn, that Luther, and before his time, John Hufs, and the Bohemian brethren, had Metrical Psalms and Hymns in the German language, which they sung to unisonous and syllabic tunes, that were either adopted or imitated by all posterior reformers. Clement Marot had been charged by the Roman catholics with ignorance of the Hebrew language; but, says Heylin, “ however unlearned he may have been,

“ During the reign of Queen Mary,
 “ 1554, the *puritan exiles*, who retired to
 “ Frankfort, agreed with the Calvinists
 “ that the public service should begin with
 “ the General Confession of Sins, then *the*
 “ *people to sing a Psalm in metre, in a plain*
 “ *tune*; after which the minister to pray
 “ for the assistance of God’s holy spirit,
 “ and so proceed to the sermon; after ser-
 “ mon, a general prayer for all estates, at
 “ the end of which was joined the Lord’s
 “ Prayer, and a rehearsal of the Articles
 “ of Belief; then the people were to sing
 “ another Psalm,” &c.—Neal’s *History of*

the Puritans, or Protestant Nonconformists,
 2d edit. 1732, p. 109.

(*r*) Sternhold, who died 1549, versified only fifty-one of the Psalms, which were printed the same year, *without Musical Notes*. Nor was any melody published with them till 1562. Hopkins, a clergyman and schoolmaster in Suffolk, versified fifty-eight; Whittingham, five; among which is the 119th; Norton, twenty-seven; Wisdome, one; the 25th and 7th have the initials of W. K. and the 106th those of T. C.

(*s*) *Eccles. Memor.* B. i. ch. ii. p. 86.

“ his

“ his version is not to be compared with that barbarity and
 “ botching which every where occurs in the translations of
 “ Sternhold and Hopkins: which, notwithstanding they were at
 “ first only allowed in private devotion, they were by little and
 “ little brought into the church: permitted, rather than allowed,
 “ to be sung before and after sermons; afterwards printed, and
 “ bound up with the *Common Prayer Book*; and at last added
 “ by the stationers at the end of the Bible. For though it is ex-
 “ pressed in the title-page of these *Singing Psalms*, that they were
 “ *set forth and allowed to be sung in all churches before and after*
 “ *morning and evening prayer, and also before and after sermons*;
 “ yet this allowance seems rather to have been a connivance than
 “ an approbation: no such *allowance* being any where found by
 “ such as have been most industrious and concerned in the
 “ search. At first, it was pretended only that the said Psalms
 “ should be sung *before and after morning and evening prayer, and*
 “ *before and after sermons*; which shews they were not to be in-
 “ termingled in the public Liturgie. But in some tract of time,
 “ as the *puritan* faction grew in strength and confidence, they pre-
 “ vailed so far in most places, as to thrust the *Te Deum*, the *Bene-*
 “ *dictus*, the *Magnificat*, and the *Nunc Dimittis*, quite out of the
 church (t).”

The first edition of Sternhold's fifty-one Psalms, printed in 1549, by Edward Whitchurch, had the following title: “ *All such*
 “ *Psalms of David as Thomas Sternholde, late Grome of the*
 “ *Kinges Majesties Robes did in his lyfe tyme drawe into Eng-*
 “ *lish metre.*” These were reprinted in 1552; but both impres-
 sions were without musical notes; and in all probability those that
 were not in possession of the tunes used by the German protestants,
 applied to them such ballad airs as would best suit the metre; as had
 been done in France, when the version of Clement Marot was in
 favour at the Court of Francis I. Sternhold lived to write a dedi-
 cation, for the first edition of his Psalms, to King Edward VI.
 following in this the example of Marot, who had dedicated his
 first thirty Psalms to the King of France.

(t) *History of the Reform. of the Church of England*, p. 127.

In the reign of Queen Mary all the Protestants, except those who courted martyrdom, sung these Psalms *sotto voce*; but after the accession of Queen Elizabeth, like orgies, they were roared aloud in almost every street, as well as church, throughout the kingdom.

Archbishop Parker, during his exile, translated the Psalms into English verse, which he afterwards printed, but never published. He adhered to the Lutheran manner in setting them, by preserving the eight modes of the Romish church; and gave, as specimens, eight tunes, in four parts, which the strict Calvinists did not allow.

The entire version of the Psalter, however, was not published till 1562, when it was tacked, for the first time, to the Common Prayer, under the following title: "**The whole Booke of Psalmes collected into English metre by T. Sternhold, J. Hopkins, and others, conferred with the *Ebrue* (*u*), with apt notes to sing them withal.**" Imprinted by John Day.

There was no base or other part, but the mere tunes, in this edition; which tunes are chiefly German, and still used on the continent by Lutherans and Calvinists, as appears by collation (*x*): particularly the melodies set to the 12th, 14th, 113th, 124th, 127th, and 134th Psalms. The versifying the Hymns *Veni Creator, The humble Suit of a Sinner, Te Deum, Benedictus, Magnificat, Nunc Dimittis*, Athanasian Creed, and Lord's Prayer, and singing them in the manner of Psalms, was done by the Bohemian brethren even before Luther's time (*y*). And Robert Wisdome's prayer against the Pope and Turk, which gave rise to Bishop Corbet's pleasant verses, addressed to his ghost, was but a literal translation of Luther's Hymn upon the same occasion. And the tune to this prayer, printed by Ravenscroft, being likewise Luther's composition, and inserted as such in the German Hymn-books, as the reader may be curious to see this melody, I shall insert it here from the German *Gesang-Buch*.

(*u*) This manner of printing the word *Ebrue* (*Hebrew*) is peculiar to the Calvinists; and one of the criteria by which the Geneva edition of the Bible is known.

(*x*) In the *Gesang-Buch* and *Choral-Buch* of Lutheran Psalm and Hymn tunes, published 1741 and 1754, at Halle and

Frankfort, there are many of our old Psalm-tunes, as well as in those of Goudimel and Claude Le Jeune.

(*y*) Ein hübsch new Gesang-Buch—von der Christlichen Bruderschaft, &c. Ulm, 1538. See an account of this book above, p. 31, note (*d*).

LUTHER'S

LUTHER'S PRAYER *against the TURKS and POPE.*

Ehalt uns Herr bey deinem Wort, Und steuer des
Preserve us, Lord, by thy dear Word, From Turk and

Pope de—fend us, Lord! Which both would thrust out of his throne, Our

zen wollen von deinem thron.
Lord Je-sus Christ, thy deare Son! (z)

William Damon seems to have been the first who composed parts to these old melodies, in England, which were published with the following title: “*The Psalmes of David in English meter, with notes of foure partes set unto them by Guilielmo Damon, to the use of the godly Christians, for recreating themselves, instead of fond and unseemely ballades, 1579.*” These

(z) *Bishop Corbet's Epigram, addressed to the Ghost of Robert Wisdome:*

“Thou once a body, now but ayre,
Arch-botcher of a Psalm or Prayer,
From Carfax* come!
And patch us up a zealous lay,
With an old ewer and for ay,
Or all and some.

* He was buried in Carfax church, Oxford.

Or such a spirit lend me
As may a Hymn down send me
To purge my braine:
But, Robert, look behind thee,
Lest TURK or POPE should find thee,
And go to bed again.

Poems, London, 1647, 12^o. p. 49.

parts not being well received by the public, he published others in 1591, and dedicated them to the Lord Treasurer Burleigh (*a*). In 1585, Cofyns published sixty Psalms, in six parts, in plain counterpoint, to the melodies which Day had printed before (*b*).

But the most ample and complete edition of the Psalms, in parts, that appeared in England during the sixteenth century, was the following: "*The whole Book of Psalmes, with their wonted tunes as they are song in churches, composed into foure parts, by nine sondry authors. Imprinted at London, by T. Est, 1594.*" These authors were John Douland, E. Blancks, E. Hooper, J. Farmer, R. Allison, G. Kirby, W. Cobbold, E. Johnson, and G. Farnaby, who are said in the title-page to have "*so laboured in this worke, that the unskilful by small practice may attaine to sing that part which is fittest for his voyce.*"

The former publications contained only forty tunes, but this furnishes one to every Psalm. To the tenor part is assigned the principal melody, as in the Psalms of Claude Le Jeune, and others, on the continent. The additional parts are *cantus*, *altus*, and *bass*. The counterpoint is constantly simple, of note against note; but in such correct and excellent harmony as manifests the art to have been very successfully cultivated in England at that time.

In 1594, likewise, John Mundy, Gentleman, Bachiler of Musicke, and one of the Organists of hir Majesty's free chappel of Windsor, published "*Songs and Psalmes composed into three, four, and five parts, for the use and delight of all such as either love or learne Musicke.*" These are dedicated to the unfortunate Earl of Essex, with all the punning, quibbling, and efforts at wit, which the taste of the times encouraged, and indeed required. Maister John does not seem, however, to have been a very dexterous *contrapuntist*; but let the musical reader judge of his skill by the following composition, which is the best that I have been able to select.

(*a*) I am in possession of a *Miserere*, in five parts, composed by William Damon; it was lent to me by Dr. Pepusch about the year 1746. The harmony is clear and good, and the subject extremely simple and uniform, the parts constantly singing a tetra-chord in *mota contrario*. a. G F E D &c. A. B. C. D.

(*b*) Musike of six and five partes; made upon the common tunes used in singing of the Psalmes. By John Cofyn. These melodies were not now called by the names of particular cities or towns, as they were, afterwards, by Ravenscroft and others.

Four part Song.

By John Mundy Published 1694.

In 1599, another collection of Psalms appeared in folio, which the Italians would have called *Salmi Concertati*, as they were intended for instruments as well as voices. "The Psalmes of David in meter, the plaine-song beinge the common tune to be sung and plaide upon the lute, orpharion, eitterne, or base violl, severally or together, the singing part to be either tenor or treble to the instrument, according to the nature of the voyce; or for foure voyces, with ten short tunes in the end, to which for the most part all Psalmes may be usuallp sung, for the use of such as are of mean skill, and whose leysure least serdeth to practize." By Richard Allison, Gent. Practitioner in the Art of Musicke. Printed by W. Bailey, the assignè of Thomas Morley.

The melodies in this collection are the same as in the earlier editions of the version by Sternhold and Hopkins. The parts are so disposed in this publication, that four persons sitting round a table may perform from the same book. If the author's friends may be credited, who have written verses in praise of the work, it abounds with uncommon excellence. However, the puff-direct, in the shape of friendly panegyrics prefixed to books, was no more to be depended on by the public in Queen Elizabeth's time, than the puffs oblique of present newspapers. The book has no merit, but what was very common, at the time it was printed.

The next publication of Psalm-tunes, in four parts, and perhaps the most complete which ever appeared in this country, was that of Thomas Ravenscroft, Bachelor of Musick; a professor not only well acquainted with the practice of his art, but who seems to have bestowed much time in the perusal of the best authors, and in meditation on the theory (c). This book, published in small octavo, 1621 and 1633, contains a melody for every one of the hundred and fifty Psalms, many of them by the editor himself, of which a considerable number is still in use: as *Windsor*, *St. David's*, *Southwell*, and *Canterbury*; there are others likewise which are sung by

(c) We shall have further occasion to speak of this author, among musical writers, hereafter; at present, Psalmody being our

chief pursuit, we shall endeavour to keep it in view, till entirely run down.

the German, Netherlandish, and French protestants. To these the base, tenor, and counter-tenor parts have been composed by twenty-one English musicians: among whom we find the names of Tallis, Dowland, Morley, Bennet, Stubbs, Farnaby, and John Milton, the father of our great poet. The tunes which are peculiar to the measure of the 100th Psalm, the 113th, and 119th, were originally Lutheran, or, perhaps, of still higher antiquity. And though Ravenscroft has affixed the name of Dr. John Dowland to the parts which have been set to the 100th Psalm, yet, in the index, he has ranked the melody itself with the French tunes; perhaps, from having seen it among the melodies that were set to the French version of Clement Marot and Theodore Beza's Psalms, by Goudimel and Claude Le Jeune. Ravenscroft, in imitation of these harmonists, always gives the principal melody, or, as he calls it, the *playn-song*, to the tenor. This part, indeed, he sometimes erroneously terms *Fa-burden* (*d*). His publication is, in some measure, historical: for he tells us not only who composed the parts to old melodies, but who increased the common stock, by the addition of new tunes; as well as which of them were originally English, Welch, Scots, German, Dutch, Italian, French, and imitations of these.

No tunes of triple time occur in Claude Le Jeune, and but five in Ravenscroft: the principal of which are Cambridge, Martyrs, Manchester, and the 81st. This last is still much used, and often played by chimes: it is called an imitation of a foreign tune, and has the name of Richard Allison prefixed to it. Müller's German edition of the Psalm tunes at Franckfort is exactly that of Claude Le Jeune, in two parts only; except, that he has transposed some of the melodies, and inserted easy leading and connective notes, to assist, not only the singer, but sometimes the tunes themselves; which, without them, would now be very bald and uncouth. Many of these old melodies are still sung to German Hymns as well as Psalms.

(*d*) This is a corruption of *faux-bourdon*, and *falso bordone*, which originally implied such simple harmony as arises from a series

of thirds and sixths to the base. See Vol. II. p. 76.

In the reign of Charles I. the Psalms were paraphrased by Mr. George Sandys, the ancestor of the present Lord Sandys, and put into better verse than they ever appeared in before or since; and the measures being different from those of Sternhold and Hopkins, were new set for private devotion by Henry Lawes, whose melodies are not so superior to those which were made by his predecessors as the poetry deserved. His brother William and he had first set them in three parts, to florid counterpoint; and these were published 1648. Of the others, in two parts, John Playford, in the next reign, was the last editor, 1676.

But the most curious and beautiful publication of the kind, during the seventeenth century, that has come to my knowledge, was that of twenty-two of "The Psalms of David, in fowre Languages, Hebrew, Greeke, Latin, and English, and in 4 parts, set to the tunes of our Church, with corrections, 1652." Both words and music are very neatly engraved on near sixty copper-plates, in 16mo. The English version is that of Sternhold, retouched, not always for the better; the music, selected from Ravenscroft. The editor was Dr. William Slater, of Brazen Nose college, Oxon; who, in 1621, published *Palæ Albion*, or the History of Britain, in Latin and English, folio.

This book, as well as Ravenscroft's, soon becoming scarce, honest John Playford furnished the lovers of Psalmody with the whole Book of Psalms and Hymns, in three parts; which being printed in a pocket volume, and at a very reasonable price, excited and encouraged a passion for this species of Music throughout the kingdom, equal to that of the Calvinists, and other protestants on the continent (e). Playford's Psalms afforded to the performers an innocent, and, as was imagined, a pious amusement, which cer-

(e) Since that time, the parochial tunes have been so generally and firmly established, that it would be difficult to prevail on the whole nation to agree in admitting any new melodies of this kind, by whomsoever composed. Diligent and zealous organists sometimes compose, and prevail on their own particular congregation to learn

new tunes to the old or new version; but their celebrity and use seldom extend even to the neighbouring parish of the same town. The only two tunes that have been so honoured as to be adopted, and used throughout the kingdom within the last hundred years, are perhaps those of the 104th Psalm, and the Easter Hymn.

tainly could neither injure nor offend any but those of nicer ears and taste, who, during divine service, were necessarily obliged to hear them. For it seems hardly credible that an action in itself so harmless and insipid as vociferating a Metrical Psalm, in which there was little sense, less poetry, and no Music, should be made subservient to such pernicious purposes as the contempt and subversion of established religion and government.

Menestrier (*f*) says, that Psalms and Hymns were the Opera Songs of the fifteenth and sixteenth century; and Varillas (*g*), that the airs applied to the first French version of the Psalms, were those of the best songs of the times. Indeed all melody seems now to have been *Psalmodic*, however gay the subject of the words to which it was applied. Macropedias, author of Latin Mysteries and Moralities, in a farce or drama called *Bassarus, Fabula festivissima*, printed at Utrecht, 1553, terminates every scene with the following lively tune:

Andrisca, Fabula Lepidissima, written 1537, has melodies set to the choruses in the same measure, which is likewise that used by this author in the Mysteries or Moralities, called the *Prodigal Son, Lazarus, Joseph, Adam*, &c. except one or two in the *Prodigal Son*, still more dolorous.

Lovers of mere harmony might receive great pleasure from Metrical Psalmody, in parts, devoid as it is of musical measure, and syllabic quantity, if it were well performed; but that so seldom happens, that the greatest blessing to lovers of Music in a parish-church, is to have an organ in it sufficiently powerful to render the voices of the clerk, and of those who join in his *out-cry*, wholly inaudible. Indeed all reverence for the Psalms seems to be lost by the

(*f*) *Des Repres. en Mus.* p. 124.

(*g*) *Hist. de l'Herésie*, liv. xxi. p. 49. An. 1559.

wretched manner in which they are usually sung; for, instead of promoting piety and edification, they only excite contempt and ridicule in the principal part of the congregation, who disdain to join, though they are obliged to hear, this indecorous jargon. There can be no objection to sober and well-disposed villagers meeting, at their leisure hours, to practice Psalmody together, in private, for their recreation; but it seems as if their public performance might be dispensed with during Divine Service, unless they had acquired a degree of excellence far superior to what is usually met with in parish-churches, either in town or country, where there is no organ.

All these particulars concerning Psalm-singing may appear superfluous; but the History of Psalmody during these times, is not only the History of Music, but of the Reformation, in some parts of Europe, where little else was to be heard, except these lamentable strains, and the comfortless doctrines and terrific denunciations of fanatical preachers. Indeed Christians of all denominations now thought that, by such metrical and musical devotion, they were performing a pious and salutary work; and, because it was amusing and delightful to themselves, that nothing could be more acceptable to the Divinity than these vocal effusions. Roger Ascham, in a letter from Augsburg, dated the 14th of May, 1551, says, "Three or four thousand singing at a time in a church of this city is but a trifle (*b*).” And according to Beza, in 1558, some of the Geneva sects (Huguenots) being in the *Prez aux Clercs*, a public place at Paris, near the University, began to sing Psalms, in which others, who were there at the time, joined. This was continued for several days by great numbers, among whom was the King of Navarre, and many Huguenot Nobles. And in Bishop Jewel's Letters to Peter Martyr, March 5, 1560, he says, "A change now appears more visible among the people; which nothing promotes more than the inviting them to sing Psalms. This was begun in one church in London, and did soon spread itself, not only through the city, but in the neighbouring places:

(*b*) See Ascham's *Works*, published by Bennet, 4to. p. 382.

“ sometimes at Paul’s Cross, there will be six thousand people
“ singing together (i).”

Italy, indeed, does not seem to have been equally infected by this malady with the rest of Europe; however, an experiment was made of the force of the *virus* in that climate, by Diodati of Lucca, a Genevan minister, who versified the Psalms in his native tongue, and had them secretly printed with unisonous Music, and dispersed through Italy. Yet, though his countrymen seem to have been insensible to the charms of Puritanical Psalmody, the *Latin Psalms*, *Motets*, *Cantiones*, *Lamentations*, *Hymns*, and *Spiritual Songs*, which were set and sung in and out of the church, were innumerable.

In Scotland, Psalmody was practised by the reformers very early; but to prose words, till about the year 1555, when it appears that Elizabeth Adamson, a follower of Knox, died singing metrical Psalms. And at the time of an insurrection, it is said of the insurgents, who had insulted the Bishops and the Queen Regent in her own palace, after destroying the statue of Saint Giles, that “ search was made
“ for the doers, but none could be apprehended: for the brethren

(i) Master Mace, in his *Musick’s Monument*, tells us, with quaint rapture, that the Psalm-singing at the siege of York, during the grand rebellion in the year 1644, “ was the most excellent that has been
“ known or remembered any where in these
“ our latter ages. Most certain I am,” continues he, “ that to myself it was the
“ very best *Harmonical Musick* that ever I
“ heard; yea far excelling all other either
“ private or publick Cathedral Musick, and
“ infinitely beyond all verbal expression or
“ conceiving.” — “ Abundance of people of the best rank and quality being
“ shut up in the city, viz. Lords, Knights,
“ and Gentlemen of the countries round
“ about, besides the souldiers and citizens,
“ who all or most of them came constantly
“ every Sunday to hear public prayers and
“ sermon, the number was so exceeding
“ great, that the church was (as I may
“ say) even *cramming and squeezing full*.

“ Now here you must take notice, that
“ they had then a custom in that church,

“ (which I hear not of in any other *cathedral*, which was) that always before the
“ sermon, the whole congregation sang a
“ Psalm, together with the quire and the
“ organ; and you must also know, that
“ there was then a most excellent-large-
“ plump-lusty-full-speaking-organ, which cost
“ (as I am credibly informed) a thousand
“ pounds.

“ This organ, I say, (when the Psalm
“ was set before the sermon) being let out,
“ into all its fulness of stops, together with
“ the quire, began the Psalm.

“ But when that vast-conchording-unity
“ of the whole congregational-chorus, came
“ (as I may say) *thundering in*, even so,
“ as it made the very ground shake under
“ us; (*Oh the unutterable ravishing soul’s
“ delight!*) in the which I was so trans-
“ ported, and wrapt up into high contempla-
“ tion, that there was no room left in my
“ whole man, viz. body, and spirit, for any
“ thing below divine and heavenly rap-
“ tures.”

“ assembled

“ assembled themselves in such sort, in companies, *singing Psalms*,
 “ and praising God, that the proudest of the enemies were asto-
 “ nished (k).”

In our own country, for more than a century after the Reformation, the spirit of change being fomented by an intercourse with the Calvinists in France, Geneva, Holland, Frankfort, and Scotland, prevented the restless and turbulent part of the nation from being satisfied with the important points which had been gained, by being liberated from Papal power, and from such doctrines as were deemed erroneous; by having divine service performed in our own language; and by the abolition of such rites and ceremonies as were thought to be the offspring of ignorance, priestcraft, and superstition. For the sluices of innovation once thrown open, such torrents of incongruous opinions, such wild expositions of Scripture, such absurd and fanatical ideas of purity and divine dispensations, deluged the whole kingdom, that nothing less than the direct reverse of all that virtue, wisdom, and piety had once thought right, would content the zealots, who wanted to persuade mankind that they were gifted with a *New Light*, by which they could not only see their road in this world better than the rest of their species, but in the next.

Some call it *Gift*, and some *New Light*,
 A lib'ral art that costs no pains
 Of study, industry, or brains.

HUDIERAS.

Many of the Roman-catholic ceremonies and superstitions seem to have been more puerile and popular than noxious; and whether the multitude is able to comprehend a pure, refined, philosophic, and spiritual religion, divested of all that captivates or deceives the senses, is still to prove: for history tells us of no people, however civilized and polished, whose religious worship has been merely intellectual.

More than sufficient has, I fear, been already said on the dull subject of Unisonous and Metrical Psalmody; and yet, before the article is finally closed, I cannot help trying to obviate the princi-

(k) Neal's *History of the Puritans*, 2d edit. p. 99, and 105.

pal objection that has been urged against the admission of a better species of Music in the service of the church.

The Puritans, who, during the reign of Queen Elizabeth, had devoted our cathedral service to destruction, and who seemed to wish not only to hear the Psalms, but the whole Scriptures, syllabically sung in metre, assigned as a reason for such an *abuse of words*, as well as annihilation of Poetry and Music, the absolute necessity of such a simple kind of Music as would suit the *whole congregation* (1). But why is the *whole* congregation to *sing* any more than preach, or read prayers? Indeed it seems to have been the wish of illiterate and furious reformers, that all religious offices should be performed by *Field-preachers* and *Street-singers*; but it is well known by all who read the Scriptures, or hear them read, that both *singing-men* and *singing-women* were appointed to perform distinct parts of religious rites among the ancient Hebrews as well as Christians; and it does not appear by any passages in the Bible, by any thing which the most ancient and learned commentators have urged concerning the performance of the Psalms, or by Rabbinical traditions, that they were all originally intended to be sung by the multitude, or whole congregation, indiscriminately. *Singing* implies not only a tuneable *voice*, but *skill* in Music: for Music either is, or is not an *Art*, or something which nature and instinct do not supply; if it be allowed that title, study, practice, and experience may at least be as necessary to its attainment as to that of a mechanical trade or calling. *Every* member of a conventicle, however it may abound with cordwainers and taylor, would not pretend to make a shoe or a suit of cloaths; and yet in our churches *all* are to sing. Such singing as is customary in our parochial service gives neither ornament nor dignity to the Psalms, or portions of Scripture, that are drawled out, and bawled with that unmusical and unmeaning vehemence which the satirist has described:

(1) It is said in the Nineteenth of Fifty-two *Articles of Reformation*, drawn up in the reign of King Edward VI. and intended for the Royal Assent, but which

never received it, that "In the Anthems (of cathedrals) all figured Music should be taken away." Burnet's *Hist. Ref.* Vol. II. p. 200.

—So swells each wind-pipe—
Such as from lab'ring lungs enthusiastic flows,
High sound, attemper'd to the vocal nose.

DUNCIAD.

It cannot be for the sake of the sentiments, or instructions, which the words contain; these are better understood when read by the clergyman and clerk; and why, after being read, they should be sung, unless Music is supposed to add to their energy or embellishment, is not easy to discover (*m*).

After bestowing so many pages on Lutheran, Calvinistical, and English Psalmody, of the sixteenth century, it is time to speak of a superior species of Church-Music, which, during the reign of Queen Elizabeth, was no where more successfully cultivated than in our own country, by Robert Whyte, Thomas Tallis, William Bird, Thomas Morley, and others.

To do justice to the musical learning and genius of these harmonists would require a dissertation of considerable length, with specimens of their compositions, that would occupy more space than I shall be able to spare; but as my late worthy friend, Dr. Boyce, in his excellent Collection of English *Cathedral-Music*, has inserted examples of the style of all our greatest masters, except White; and as many of their productions are preserved in manuscript by the curious, there will be the less occasion to exhibit them here.

As none but the highest mountains and most lofty promontories of a country are visible at a great distance, so none but the most towering and exalted characters of a remote age are prominent to posterity. In proportion as we recede from any period of time, inferior actors, however they may have distinguished themselves to their contemporaries, are rendered invisible, and, like telescopic stars, can only be discovered by the assistance of art. In Musical History, therefore, it is only a few protuberant and gigantic characters that the general eye can see stalking at a distance. History, indeed,

(*m*) In many conventicles, and even parish churches, each line of a Psalm is pronounced aloud by the clerk, before it is sung by the congregation; which is confessing that even their own syllabic and uni-

sonous singing is not sufficiently plain to render the words intelligible; and indeed they are more disguised and injured by psalmodic singing than by the most rapid and artificial cantilina of florid song.

sometimes

sometimes lends her hand to a deserving name, that has been obscured or eclipsed by accident or injustice, and lifts it from oblivion.

ROBERT WHITE, who preceded Bird and Tallis, and who died before their fame was well established, was an excellent composer of church services in the style of Palestrina; which, however, he did not imitate, as he was anterior to him, and a great master of harmony before the productions of this chief of the Roman school were published, or at least circulated, in other parts of Europe (*n*). The works of White seem never to have been printed; but in the library of Christ Church, Oxford, a sufficient number of them in manuscript has been preserved, to excite not only wonder, but indignation, at the little notice that has been taken of him by musical writers (*o*). Morley, indeed, has given him a place in the list of composers at the end of his Introduction, and ranks him with Orlando di Lasso, among *excellent men*, who had ventured to begin a composition with a fourth and sixth (*p*); he likewise (*q*) places him with Fairfax, Taverner, Shepherd, Mundy, Parsons, and Bird, “famous Englishmen who have been nothing inferior to the best composers on the continent.” And no musician had then appeared who better deserved to be celebrated for knowledge of harmony, and clearness of style, than Robert White, as the following Anthem for five voices will sufficiently shew.

(*n*) White was dead in 1581, when his Latin Full Anthems and Services were beautifully transcribed in a set of books, still preserved at Oxford; as we find by a distich at the end of a prayer, in five parts, upon a plain song: “*Precamur Sancte Domine.*”

*Maxima Musarum nostrarum gloria White
Tu peris; æternum sed tua Musa manet.*

(*o*) The collection of printed and manuscript Music, bequeathed to Christ Church, Oxon, by that great judge and patron of the art, Dr. Aldrich, joined to that of its

late organist, Mr. Richard Goodson, which was very considerable, is one of the most complete, in old masters, that I have seen: To these valuable books I have not only been honoured with free access by the Rev. Dean and Canons, but allowed, in the most liberal manner, to take many of the most curious in the collection out of the library, for a considerable time, in order to consult and make extracts from them at my leisure.

(*p*) *Annotations.*

Besides this composition, and a great number of others, to Latin words, which I have scored from the Christ Church books, and which were probably produced at the latter end of Henry VIII.'s reign, or during the time of Queen Mary, when the Romish service was still in use, I am in possession of a small manuscript, which, by the writing and orthography, seems of the sixteenth century, entitled, "*Mr. Robert Whyte, his Bitts, of three Parte Songes, in Partition; with Ditties, 11, without Ditties, 16.*" These are short fugues or intonations in most of the eight ecclesiastical modes, in which the harmony is extremely pure, and the answer to each subject of fugue brought in with great science and regularity.

Though Choral Music had been cultivated by several able harmonists before Tallis and Bird had distinguished themselves; yet, as few compositions, anterior to the time in which these admirable masters flourished, have been preserved, and of these few, scarce any continue to be used in our cathedral service, they may with truth be called the fathers of our genuine and national Sacred Music. Indeed I have been able to find, in all my researches, no choral compositions in other parts of Europe, of equal antiquity, superior to those which have been preserved of these authors, the pride of our country, and honour of their profession!

THOMAS TALLIS, the master of Bird, and one of the greatest musicians, not only of this country, but of Europe, during the sixteenth century, in which so many able contrapuntists were produced, was born early in the reign of Henry VIII. but though it has been frequently asserted that he was organist of the Chapel Royal during the reigns of that Monarch, Edward VI. Queen Mary, and Queen Elizabeth; yet it would be difficult to prove that, in the three first of these reigns, laymen were ever appointed to any such office. In the reign of Henry, and his daughter Mary, when the Roman catholic religion prevailed, the organ, in convents, was usually played by monks; and in cathedrals and collegiate churches and chapels, by the canons, and others of the priesthood. The first lay organists of the Chapel Royal upon record

cord were Dr. Tye, Blithman, the master of Dr. Bull, Tallis, and Bird; all during the reign of Queen Elizabeth.

Though the *melody* of the cathedral service was first adjusted to English words by Marbeck (*r*), yet Tallis enriched it with *harmony*. Indeed the melody used by Tallis is not exactly similar to that of Marbeck, it is only of the same kind: consisting of fragments of the ancient ecclesiastical *canto fermo*. But the harmony in which he has clothed it is admirable; and the modulation being so antique, chiefly in common chords or fundamental harmony to each note of the diatonic scale, often where the moderns have sixths, sevenths, and their inversions, produces a solemn and very different effect from any Music that has been composed during the present century (*s*).

There are two compositions by Tallis for the organ, preserved in Queen Elizabeth's Virginal Book, one of which is dated 1561, and the other 1564; both built upon a dull and unmeaning ground, or fragment of plain-chant, (*fælix namque*), and both alike dry, elaborate, and difficult, to hands formed by modern Music. The little melody and rhythm in the compositions of these times required all the harmony that could be crowded into them. Notes are multiplied without end, and difficulties created without effect. It is not by the *Instrumental* Music, which had been but little cultivated, that we must judge of the genius of old masters; but by *Vocal*, in parts: where the harmony and contrivance compensate for want of accent, taste, and invention. A Prayer, in four parts, published by Tallis in 1565, has been already given (*t*); but the Latin Motets and Hymns, or *Cantiones sacræ*, which he published jointly with those of his disciple Bird, are perhaps the best of his compositions that have been preserved. These appeared in 1575, under the following title: *Cantiones quæ ab Argumento sacræ vocantur quinque et sex Partium. Autoribus Thoma Tallissio et*

(*r*) See Vol. II. p. 578.

(*s*) As all *melody*, in which the semitones are avoided, must resemble that of Scotland: so all *harmony*, in which neither the *tritonus* nor false fifth occur, and where the second, third, and sixth of the key, are

only accompanied with common chords, must remind us of that which prevailed in the sixteenth century; and though so ancient, appear new to our ears, from its long disuse.

(*t*) See above, p. 27.

Gulielmo Birdo, *Anglis, Serenissimæ Reginae Majestati à privato sacello Generosis et Organistis.* At the time of this publication, a very arbitrary and monopolising patent was granted by Queen Elizabeth to these composers, for twenty-one years, not only for the publication of their own productions, vocal and instrumental, but those of all other musicians, whether English, French, or Italian, as well as for the sole ruling and vending of Music-paper (u).

Most of these excellent compositions, of which the words were originally Latin, were afterwards adjusted to English words by Dr. Aldrich, and others, for the use of our cathedrals. The canons, inversions, augmentations, diminutions, and other learned and fashionable contrivances of the times, which were of very difficult accomplishment, are carried to a wonderful degree of ingenuity in these productions.

Dr. Thomas Tudway, of Cambridge, made a very valuable collection of English Church Music, in score, from the Reformation to the Restoration, in six volumes, thick 4to. for Lord Harley, afterwards Earl of Oxford, which is now among the Harleian ma-

(u) "The Extract and Effect of the Queenes Maiesties letters patents to Thomas Tallis and William Birde, for the printing of Musicke :

"ELIZABETH, by the grace of God Queene of Englands, Fraunce, and Irelande, Defender of the Faith, &c. To all printers, bookesellers, and other officers, ministers, and subiects, greting: Knowe ye, that we for the especiall affection and good wil that we haue and beare to the science of Musicke, and for the aduancement thereof, by our letters patents dated the xxii. of Ianuary, in the xvii. yere of our raigne, haue graunted full priuiledge and licence vnto our welbeloued seruants Thomas Tallis and William Birde, Gent. of our Chappell, and to the ouerlyuer of them, and to the assignes of them, and the suruiuer of them, for xxi. yeares next ensuing, to imprint any and so many as they will of set songe or songes in partes, either in English, Latine, French, Italian, or other tongues that may serue for Musicke either in churche or chamber, or otherwise to be either plaid or soonge; and that they may rule, and cause

"to be ruled, by impression, any paper to serue for printing or pricking of any songe or songes, and may sell and viter any printed bookes and papers of any songe or songes, or any booke, or quieres of such ruled paper imprinted. Also we straightly by the same forbid all printers, bookesellers, subiects and straungers, other than as is afore said, to do any the premisses, or to bring, or cause to be brought out of any forren realmes into any our dominions, any songe or songes made and printed in any forren countrie, to sell or put to sale, vppon paine of our high displeasure; and the offender in any of the premisses for euery time to forfeit to us, our heires, and successors, fortie shillings; and to the said Thomas Tallis and William Birde, or to their assignes, and to the assignes of the suruiuer of them, all and euery the said bookes, papers, songe, or songes. We haue also by the same willed and commaunded our printers, maisters and wardens of the misterie of stationers, to assist the said Thomas Tallis and William Birde, and their assignes, for the deue executing of the premisses."

manuscripts, in the British Museum, No. 7337. In the first volume of this collection we have the whole service of Tallis in D minor, in four parts, consisting of the *Te Deum*, *Benedictus*, *Kyrie Eleison*, *Credo*, *Magnificat*, *Nunc Dimittis*, and *Litany*, as printed in 1760, by Dr. Boyce; with several anthems in four and five parts: as, “Wipe away my sins; With all our hearts and mouths; O Lord, give thy holy spirit; I call and cry:” and his anthem, “Discomfit them, O Lord!” erroneously said by Dr. Tudway to have been set for the victory over the Spanish Armada, 1588.

In Christ Church, Oxford, are manuscript scores of his *Preces*, *Litany*, and *Anthems*, among others by Bird, Farrant, Bull, Gibbons, and Child. Five of his motets and full anthems, in five parts, to Latin and English words, are likewise here preserved among the works of other English masters, in Dr. Aldrich's collection. But the most curious and extraordinary of all his labours, was his SONG OF FORTY PARTS, which is still subsisting (x). This wonderful effort of harmonical abilities is not divided into *choirs* of four parts: soprano, altus, tenor, and base, in each, like the compositions *a multi cori*, of Benevoli, and others; but consists of eight trebles, placed under each other; eight mezzis sopranis, or mean parts; eight counter-tenors; eight tenors; and eight bases; with one line allotted to the organ. All these several parts, as may be imagined, are not in simple counterpoint, or filled up in mere harmony, without meaning or design, but have each a share in the short subjects of fugue and imitation, which are introduced upon every change of words. The first subject is begun in G, by the first mezzo soprano, or medius, and answered in D, the fifth above, by the first soprano; the second medius in like manner beginning in G, is answered in the octave below by the first tenor, and that by the first counter-tenor in D, the fifth above; then the first base has the subject in D, the eighth below the counter-tenor; and thus all the forty *real* parts are severally introduced

(x) After being in the possession of the Earl of Oxford, it was attracted into the vortex of Dr. Pepusch; but is, at present,

the property of Mr. Robert Bremner, Music-printer, in the Strand.

in the course of thirty-nine bars, when the whole vocal phalanx is employed at once, during six bars more (y). After which a new subject is led off by the lowest base, and pursued by other parts, severally, for about twenty-four bars, when there is another general chorus of all the parts; and thus this stupendous, though perhaps Gothic, specimen of human labour and intellect, is carried on in alternate flight, pursuit, attack, and choral union to the end; when the *Polyphonic Phenomenon* is terminated by twelve bars of universal chorus, in quadragintesimal harmony (z).

This venerable musician died in November, 1585, and was buried in the old parish church of Greenwich, in Kent. The following epitaph, which Dr. Boyce has printed in the first volume of his *Collection of Cathedral Music*, Strype, in his *Continuation of Stow's Survey*, printed 1720, says he found engraved in Gothic letters, on a brass plate in the chancel.

Entered here doth by a worthy wight,
Who for long tyme in Musick bore the bell:
His name to shew was Thomas Tallis hyght,
In honest vertuous lyff he dyd excell.
He serv'd long tyme in Chappel with grete prayse
Fower Sovereignes reignes, (a thing not often scene);
A mean King Henry and Prince Edward's dayes,
Quene Marie, and Elizabeth our Quene,
He maried was, though children he had none,
And lyv'd in love full three and thirty yeres
With loyal spouse, whos name receypt was Jone,
Who here entomb'd, him compaign now bears.
As he dyd lyve, so also dyd he dy.
In myld and quyet sort, O happy man!
To God ful oft for mercy did he cry,
Wherefore he lyves, let Deth do what he can.

The stone to which this plate was affixed had been renewed by Dr. Aldrich; but the old church having been pulled down, about the year 1720, in order to be rebuilt, no memorial remains of Tallis, or any other illustrious person, who had been interred there, anterior to that period (a).

I shall

(y) The entire composition consists of one hundred and thirty-eight bars, in *alla breve* time.

(z) If ever any other compositions than those of Handel were to be performed in Westminster-Abbey, during the stupendous

Annual Congress of Musicians, it seems as if this, and others of Tallis, Bird, Gibbons, and Purcell, should have the advantage of such a correct and numerous choral band.

(a) In the tenor part of the beautiful set of manuscript books in the musical library

I shall here insert two movements, by this admirable contrapuntist, from the *Cantiones Sacræ*, (No. I. and No. XIII.) which are become very scarce; and though they are somewhat long, and will require more plates than I can well afford to give, yet, if foreigners should ever deign to look into my book, it is my wish, for the honour of our nation, they should see, that long before the works and reputation of Palestrina had circulated throughout Europe, we had Choral Music of our own, which for gravity of style, purity of harmony, ingenuity of design, and clear and masterly contexture, was equal to the best productions of that truly venerable master.

All that is likely to disturb modern eyes and ears in the first of these compositions, is the frequent use of the 3d. with the 5. (at this mark +), which occurs likewise in most of Tallis's other productions: a combination that later contrapuntists have long since avoided. The ear, however, may tolerate this triple dissonance on most occasions, except when it immediately precedes a close, (as at this sign ÷), where it must offend every cultivated and well-organised ear.

In the second example, the answers to the two first subjects of fugue, or imitation, are curious: being very ingeniously given in the third below each part; which, though uncommon, is pleasing, and productive of good effects, from the alternate use of ma-

major and minor keys:  At the introduction of new words, there are six other subjects of fugue and double counterpoint in this movement; all which are treated in a very masterly manner.

brary of Christ Church, Oxon, already mentioned, containing many admirable compositions, chiefly to Latin words, by the best English masters of the sixteenth century, among which are several by Tallis, which were entered in these books during his life; we find at the end of No. 42, the following distichs:

*Quatuor illustris vixit sub Regibus iste
Tallissius magno dignus honore senex.
Sub quibus eximius si Musicus esset habendus
Tallissius semper gloria prima fuit.*

In the base part, p. 20, is likewise this distich:

*Talis et tantus Tallissi Musicus, ut si
Fata senex auferrent Musica muta foret.*

And p. 43, it is said, *Mortuus est 23^o Novembris, 1585. Sepultus Grenovici in Chori Ecclesiæ Parochialis.* Which being recorded at the time, invalidates Dr. Tudway's supposition, that his anthem, "Dis-
"comfit them, O Lord," was composed for the Spanish invasion, 1588.

WILLIAM BIRD, the worthy and admirable scholar of the profound Tallis, is supposed to have been the son of Thomas Bird, one of the Gentlemen of Edward the Sixth's chapel, in which he was, himself, a singing-boy. By the great number of his ecclesiastical compositions to Latin words, and the several portions of the Romish ritual which he so frequently set to Music, and published late in life, he seems to have been long a zealous adherent to that religion. He must, however, have conformed to the church establishments of Queen Elizabeth's reign; for, in 1563, he was chosen organist of Lincoln cathedral, where he continued till 1569, when, upon the accidental death of Robert Parsons (b), who was drowned at Newark upon Trent, he was appointed Gentleman of the Chapel Royal. Notwithstanding which office, he seems to have composed the chief part of his Choral Music to Latin words, and to have published it in that language, as late as the middle of the reign of King James I.

In 1575, it appears by the title-page of the *Cantiones Sacrae*, and the patent annexed to that work, that he and Tallis were not only Gentlemen of the Royal Chapel, but *Organists* to her Majesty Queen Elizabeth. Indeed both must have been great performers on the organ, to have been able to play such of their pieces for that instrument as are still preserved; in which the passages, though awkward to performers who are only accustomed to modern Music, must have been suggested by hands that were habituated to the complicated, and now, almost, invincible difficulties of the sixteenth century. And though the compositions for keyed-instruments, by these great masters of harmony, are totally unimpassioned, and without grace, it is impossible not to regard their ingenuity and contrivance in the texture of the parts, with respect and wonder!

If we consider the elaborate style of composition which prevailed, particularly in the church, during the time of Bird, and that he, like his master Tallis, was not only ambitious of vanquishing its usual difficulties in the construction of fugues and canons, but sought new complications, perplexities, and involutions in the motion and

(b) See Vol. II. p. 567.

arrangement of the parts, the following list of his works will not only manifest diligence, but fecundity.

Besides the great share he had in the *Cantiones Sacræ*, published in conjunction with his master Tallis, in 1575, when his name first appears as an author; and without enumerating many admirable compositions for the church and chamber, still subsisting, but which were never printed, or, at least, not till after his decease, he published

Psalms, Sonnets, and Songs of Sadnes and Pietie, of five parts (e), 1588.

Liber primus sacrarum Cantionum, quinque vocum (f), 1589.

Songs of sundrie Natures, some of Gravitie, and others of Myrth, fit for all Companies and Voyces (g), 1589.

Gradualia ac Cantiones Sacræ, Lib. primus et secundus (h), 1607 and 1610.

The last work published by himself, was entitled,

Psalms, Songs, and Sonnets: some solemne, others joyful, framed

(e) This work is dedicated to Sir Christopher Hatton, Lord Chancellor, calling it his first production to English words. At the back of the title we have

“ Reasons briefly set downe by th’ Auctor, to perswade every one to learn to sing.

“ First, It is a knowledge easily taught, and quickly learned, wher there is a good master, and an apt scoler.

“ 2. The exercise of fingering is delightful to nature, and good to preserve the health of man.

“ 3. It doth strengthen all parts of the breast, and doth open the pipes.

“ 4. It is a singular good remedie for a stuttering and stammering in the speech.

“ 5. It is the best means to preserve a perfect pronounciation, and to make a good orator.

“ 6. It is the only way to know where nature hath bestowed the benefit of a good voyce: which gift is so rare, as there is not one among a thousand that hath it: and in many that excellent gift is lost, because they want art to expresse nature.

“ 7. There is not any Musicke of instruments whatsoever, comparable to that which is made of the voyces of men,

“ where the voyces are good, and the same well sorted and ordered.

“ 8. The better the voyce is, the meeter it is to honour and serve God therewith: and the voyce of man is chiefly to be employed to that end.

“ *Omnis spiritus laudet Dominum.*

“ Since fingering is so good a thing,

“ I wish all men would learn to sing.”

(f) The style of these *Sacred Songs*, which are dedicated to Edward Somerset, Earl of Worcester, is peculiarly grave and solid.

(g) Dedicated to Lord Hunsdon; to whom, as well as in the preface, he observes, that “ since the publishing his last labours in Musicke, the exercise and love of the art had exceedingly increased.”

(h) The first book of these admirable pieces of harmony is dedicated to the Earl of Northampton, who had prevailed on King James to augment the salaries of the Gentlemen of the Chapel Royal. The second book is dedicated to Lord Petre. These compositions are equally grave and solemn with those of Palestrina, to the same words, and seem in no respect inferior to the choral works of that great master.

to the Life of the Words (i), fit for Voyces or Viols, of three, four, five, and six partes, 1611.

Dr. Tudway's collection, in the British Museum, contains a whole service in D minor, by Bird, with responses, and the anthems, *Sing joyfully unto God — O Lord, turn thy Wrath —* (all published in the second and third volumes of Dr. Boyce's Cathedral Music). — *O Lord, make thy Servant — Save me, O God — Prevent us, O Lord. Civitas sancti tuo*, one of his *Sacrarum Cantionum*, or Sacred Songs, published 1589, has been long sung in our cathedrals to the English words, "Bow thine ear, O Lord," and is one of the admirable pieces of harmony in the second volume of Boyce's printed collection.

Dr. Aldrich, who was a great admirer and collector of the works of Bird, and who adapted English words to most of his compositions which have been used in our cathedrals, and that were originally set to parts of the Romish service, in Latin, has bequeathed to Christ Church, Oxon, beautiful and correct copies of most of his productions. In the small quarto set of books, already mentioned, near forty of his compositions are preserved; and in another set, many more, with those of Tallis, Taverner, Tye, White, Redforde, both the Mundys, Shepherd, Bull, and other cotemporary English masters.

(i) Notwithstanding this boast, he does not seem to have been more attentive to accent, or successful in attempts at expression, in these songs, than elsewhere. Indeed among his *Songs of sundrie natures*, the obvious imitation of the words, by musical intervals, in setting the 130th Psalm, "From Depth of Sinne;" and that of the *trussing*, or soaring and stooping of the falcon, in "The greedy Hawke with fooden Sight of Lure," have not escaped him. But imitative and picturesque Music, and such beauties as proceed from light and shade, and variety of effect, were not in contemplation till some time after the musical *Drama* was cultivated; so that, deficient as the compositions of our countrymen of the sixteenth century may be, in these particulars, they are not more deserving of censure than those of the best masters of Italy, France, and Flanders, of

the same period. After pointing out, therefore, the *general* inattention at this time to prosody, accent, and quantity, in setting to Music every language, ancient and modern, it would be more candid to others, and, perhaps, kind to ourselves, to examine the compositions of old masters by such rules as were at that period established, than by *ex post facto* laws. We should then find a grateful purity of harmony, such as the age allowed, in which a sparing use was made of such discords only as were least offensive; an ingenuity of design and contrivance; a solemnity of style, and a sober modulation: which, though not appropriated to Ecclesiastical Music only, in the time of Tallis and Bird, renders its performance peculiarly grave, and the sensations it excites totally remote from all those which are now produced by modern Music of any kind, ecclesiastical or secular.

His

His pieces for the organ and virginals are almost innumerable. In a magnificent folio manuscript, curiously bound in red Morocco, already mentioned (*k*), which is generally known by the name of QUEEN ELIZABETH'S VIRGINAL BOOK, there are near seventy of his compositions (*l*).

The first piece by Bird, in this book, and the eighth in the collection, is a *Fantasia*, which generally implies a *Fugue*, in which the subject is as frequently changed as in ancient Choral Music, where new words require new accents and intervals; for as yet, it was not the custom in composing fugues to confine a whole movement to one theme: and here Bird introduces five or six, wholly different and unconnected with each other (*m*).

The

(*k*) *Vide* p. 15.

(*l*) This book, equally valuable for its antiquity and contents, was purchased at Dr. Pepusch's sale, in 1762, by Mr. Robert Bremner, whose property it is at present. The writing is small, but uncommonly neat, upon six lines. The compositions are in general extremely elaborate and difficult; particularly those by Bird, Dr. Bull, and Giles Farnabie, who have all contributed largely to the furnishing of this volume, which contains near three hundred pieces. The first movement in the book is an old English tune, called *Walsingham*, beginning in C natural, and ending in A major, which Dr. Bull has varied, in a most full and complicated style, thirty different ways. Signora Margarita, the wife of Dr. Pepusch, when she quitted the Opera stage, applied closely to the practice of the harpsichord; upon which instrument she became a great proficient. However, with all her own diligence and talents, assisted by the science and experience of her husband, she was never able to vanquish the difficulties of this piece, by Dr. Bull. And several of Dr. Pepusch's friends and pupils, who went frequently to his apartments at the Charter-house, have assured me, that though this manuscript was constantly open upon her harpsichord desk, she never advanced to the end of the variations; as seems likewise manifest from the colour, as well as wear and tear, of the leaves, which are much more clean and entire in every other part of the book, than

at the first strains of this composition.

(*m*) The first regular fugue, for the organ, upon one subject, that I have seen, was composed by Peter Philips, about the end of the sixteenth century, and is inserted in the Virginal Book of Queen Elizabeth, which contains eighteen or twenty of his compositions. He was an Englishman, but resided chiefly abroad, being for some time organist of the collegiate church of St. Vincent, at Soignies, in Germany; and afterwards engaged in the service of the Archduke Albert of Austria. Draudius (*Bibl. Class. et Exotica.*) has given the titles of several of his vocal compositions; and Peacham (p. 102.) says, "Nor must I forget our rare countryman, Peter Philips, organist to their *Altezza's*, at Brussels, now one of the greatest masters of Musick in Europe. Hee hath sent us over many excellent songs, as well *motets* as madrigals: he affecteth altogether the Italian veine." *Second Edit.* 1634. This author has manifested considerable abilities in treating a single subject, which he has introduced no less than thirty-nine times: simple; in augmentation; and in diminution. The harmony is very full, but the modulation being chiefly confined to the key-note, and its fifth, is somewhat monotonous; and the divisions, in accompanying the subject, are now become too common and vulgar to afford pleasure, or even to be heard with patience, by fastidious judges of modern melody. It has been said by M. Marpurg, (*Traité*

The subject of the second composition, by Bird, in the Royal Virginal Book, is the tune of an old ballad, "*Thou come kiss me now*;" of which, with great labour and ingenuity, he has varied the accompaniments sixteen different ways; for while the treble, base, or some inward part, is always playing the original air, three other parts are moving in fugue, or running rapid and difficult divisions (*n*). No. 52, is another *Fancie*; and 56, a *Pavan*, by Bird; which implied a grave majestic dance, in common time, similar to the movement of the Peacock (*o*). This strain was usually followed by the *Galliard*; which, on the contrary, was a gay and lively dance, in triple time, but on the same subject as the preceding *Pavan* (*p*). No. 58, is entitled, *The Carman's Whistle*. From No. 58 to 69, the compositions are all by Bird; consisting chiefly of old tunes, with variations; among which is *Fortune*, a plaintive and expressive melody, to which the ballad, called *Titus Andronicus's Complaint*, inserted in *Reliques of ancient English Poetry*, Vol. I. p. 204, was originally written. It has been imagined that the rage for variations, that is, multiplying notes, and disguising the melody of an easy, and, generally, well-known air, by every means that a *spacca nota*, or *note splitter*, sees possible,

(*Traité de la Fugue*), that fugues enjoy the privilege of greater longevity than any other species of Music; (*les fugues composées il y a cent ans sont encore aussi neuves que si elles l'avoient été de nos jours*;) but then the subjects must be sober, pleasing, and rigorously pursued, without extraneous episodes, or fashionable divisions, which being the *agréments*, or *trimmings*, of the times, become antiquated, and often ridiculous, in a very few years. The simplicity of Corelli's style has doubtless greatly contributed to the longevity of his compositions; and it seems as if the more transient general use and favour of Purcell's productions, who flourished about the same time, may be ascribed to the temporary graces and embellishments with which, for the use of ignorant fingers, he loaded his melodies, which his other excellencies of invention,

modulation, and expression of words, could not save from neglect. And in the course of my musical reading, I have constantly found, by the *Risfioramenti* recommended at different times by musicians of taste in Italy, that written graces have the same fate in every country: they are the *furbelows* and *flounces* of the day, which become the sooner obsolete and ridiculous, in proportion to the degree of caprice and fantasticalness with which they are made.

(*n*) I should have inserted this air, and the variations, but that they are too numerous, and indeed too difficult, ever to be vanquished by many of my musical readers.

(*o*) It is sometimes, however, written by the Italians, *Padoana*, as if it was peculiar to the city of Padua.

(*p*) See Morley's *Introd.* p. 187, 1st edit.

was the contagion of the present century; but it appears from the *Virginal Book*, that this species of *influenza*, or *corruption of air*, was more excessive in the sixteenth century, than at any other period of Musical History.

Crowded and elaborate as is the harmony, and uncouth and antiquated the melody, of all the pieces in this collection by various composers, there is a manifest superiority in those of Bird over all the rest, both in texture and design (*q*). In a later age his genius would have expanded in works of invention, taste, and elegance; but, at the period in which he flourished, nothing seems to have been thought necessary for keyed-instruments, except variations to old tunes, in which all the harmony was crowded, which the fingers could grasp, and all the rapid divisions of the times, which they could execute. Even nominal *Fancies* were without fancy, and confined to the repetition of a few dry and unmeaning notes in fugue, or imitation. Invention was so young and feeble, as to be unable to go alone; and old chants of the church, or tunes of the street, were its leading-strings and guides.

Though the Reformation had banished superstition from the land, fragments of *canto fermo*, like rags of Popery, still remained in our old secular tunes, and continued to have admission in the new. Indeed the melodies of all the rest of Europe had no other model than the chants of the church, till the cultivation of the Musical Drama; whence all the rhythm, accent, and grace of modern Music, have manifestly been derived.

As *The Carman's Whistle* has more air, and is less complicated in the texture of the parts, than the rest of Bird's Virginal Music, I shall present it to the reader, as a specimen of the manner in which these vulgar tunes were played, on keyed-instruments, by the best masters of Queen Elizabeth's time.

(*q*) *La Volta*, an Italian dance, *Wolfey's Wike*, and *Callino Castorame*, all artificially wrought, and manufactured for the *Virginal*

Book, by Bird, were melodies of the best and most chearful kind, of the times, and are still airy and pleasing.

The Carman's Whistle, with Variations, by W. Bird.

89

This musical score is for a piece titled "The Carman's Whistle, with Variations" by W. Bird. It is a single-page manuscript, page 89, featuring eight systems of music. Each system consists of a treble and bass staff joined by a brace. The key signature is one sharp (F#), and the time signature is 6/4. The notation includes various musical symbols such as notes, rests, and accidentals. The piece is characterized by its repetitive, whistle-like melody. The first system begins with a treble staff containing a series of eighth notes and a bass staff with a similar pattern. The subsequent systems show variations in the melody and accompaniment, with some systems featuring more complex rhythmic patterns and others featuring simpler, more direct lines. The notation is clear and legible, with a focus on the melodic line in the treble staff and the harmonic support in the bass staff. The overall style is that of a 19th-century musical manuscript, with a focus on the melodic and rhythmic elements of the piece.

This page contains a handwritten musical score, numbered 90 in the top left corner. The score is organized into eight systems, each consisting of a treble staff and a bass staff. The notation is in a historical style, featuring various note values, rests, and dynamic markings. The first system begins with a treble clef and a bass clef, with a '6' written above the treble staff. The second system continues the piece. The third system begins with a treble clef and a bass clef, with a '7' written above the treble staff. The fourth system continues the piece. The fifth system begins with a treble clef and a bass clef, with an '8' written above the treble staff. The sixth system continues the piece. The seventh system begins with a treble clef and a bass clef, with a '9' written above the treble staff. The eighth system continues the piece. The notation includes various note values, rests, and dynamic markings such as 'hr' and 'f'. The paper is aged and shows some staining.

Besides the great number of Bird's compositions for keyed-instruments, which are preserved in the *Virginal Book* of Queen Elizabeth, another manuscript collection of his pieces still subsists, under the title of *Lady Nevil's Music Book*. It is a thick quarto, very splendidly bound and gilt, with the family arms beautifully emblazoned and illuminated on the first page, and the initials H N at the lowest left hand corner. The Music is all written in large, bold characters, with great neatness, on four staved paper, of six lines, by Jo. Baldwine, a singing-man at Windsor, and a celebrated copyist of Queen Elizabeth's time. The pieces contained in this collection, sixteen of which are entered in that Queen's *Virginal Book*, amount to forty-two, with variations to many of them, of the most laboured and difficult kind. The notes, both white and black, are of the lozenge form, like those of the printed Music of the same period.

Lady Nevill seems to have been the scholar of Bird, who professedly composed several of the pieces for her Ladyship's use (r).

None of Bird's pieces for keyed instruments seem to have been printed, except eight movements in a thin folio book of lessons that was engraved on copper, and published in the reign of King James I. under the following title: "PARTHENIA, or the Maidenhead of the first Musicke that ever was printed for the Virgi-

(r) The first composition in the book is entitled *Ladye Nevill's Grownde*; the second, *Qui passe*; for my Lady Nevill. The rest are entered in the following order: † *The March before the Battell*. This in Queen Elizabeth's book is called "*The Earl of Oxford's March*." *The Battell*; *the March of Footemen*; *the March of Horsemen*; *the Trumpetts*; *the Irish Marche*; *the Bagpipe and Drone*; *the Flute and Drone*; *the March to fight*; *Tantara*; *the Battells be joyned*; *the Retreat*; *the Galliarde for the Victorie*; *the Barley Breake*; *the Galliarde Gygg*; † *the Hunt's upp*; † *Ut. re. mi. fa. sol. la.* Then follow nine *Pavians*, and nine *Galliardes*, several of which are in the Royal *Virginal Book*. After which is the *Voluntarie Lesson*; † *Will you walk the Woods*

soe wyld, (composed in 1590); † *the Mayden's Song*; *a Lesson of Voluntarie*; *the second Grownde*; † *Have with you to Walsingham*; *All in a Garden grene*; *the Lord Willobie's Welcome Home*; † *the Carman's Whistle*; † *Hugh Ashton's Grownde*; *a Fancie, for my Lady Nevill*; † *Sellinger's Rownde*; *Munser's (Monsieur's) Almaine*; *the tenth Pavian*; *a Fancie*; *a Voluntarie*.—The pieces with this mark † are in Queen Elizabeth's *Virginal Book*.

It is recorded by the copyist that his labour was "finished and ended the leventh of September; in the yeare of our Lorde God, 1591. and in the 33. yeare of the raigne of our Sofferaine Ladie Elizabeth, by the Grace of God, &c. By me, Jo. Baldwyne, of Windfore."

" nalls. Composed by three famous masters: William Byrd, Dr. John Bull, and Orlando Gibbons, Gentlemen of his Majesties most illustrious Chappel (s)." These lessons, though not equally difficult with some of those in the Virginal Books of Queen Elizabeth and Lady Nevill, are rather more dry and ungraceful.

The canon, *Non nobis Domine*, appears in none of his works published by himself, or collected by others, before the year 1652; when Hilton inserted, and prefixed the name of Bird to it, in a collection of *Catches, Rounds, and Canons*. But as no claim was laid to it by, or in favour of, any other composer, before or since that time, till about the middle of the present century, when it was given to Palestrina by Carlo Ricciotti, who published, in Holland, among his concertos, a fugue in eight parts, on the same subject, there seems no doubt remaining of our countryman Bird having been the author of that pleasing and popular composition (t).

(s) Bird being here called "Gentilman of his Majesties chappel," seems to imply, that he was still living when it was published. King James died 1525, and Bird 1523. The three first movements in this collection, consisting of a *Preludium*; *Pavana*; *Sir William Peder*; and a *Galiardo*; are in G minor, and may be called a *Suite* of Lessons. The fourth and fifth movements, *Preludium*; and *Galiardo*, Mrs. Marye Brownlo, in C; and the sixth, seventh and eighth, *Pavana*, the Earle of Salisbury; *Galiardo primo*; and *Galiardo secundo*, Mrs. Marye Brownlo, in A minor; constitute what may likewise be regarded as two other *Suites de Pieces*, or Sets of Lessons.

(t) Zarlino, Palestrina, and many others of the old Italian masters, have made the same series of sounds the subject of incidental points in their compositions, but in none of their works have I been able to discover a regular Canon on the same motivo. Morley has worked upon it, p. 160, but calls it "a most common point." — This celebrated canon has been lately said, by the ingenious author of "*Letters on various Subjects*," to contain "some passages not to be endured." And indeed the established and fundamental rules for

the use of discords are thrice violated in this favourite composition; for bar 6 and 9, the 7th is resolved on the 8th; and bar 10, an unprepared 7th ascends to the 8th, while the base is stationary. But I believe this last fault is occasioned by our performing this species of canon in a manner different from that used by our ancestors; who finished, *one at a time*, as they began. I am sorry, however, to be of a different opinion from a writer of acknowledged good taste in the polite arts, with respect to *Catches of all kinds*; but it seems to me as if the censure he has passed on them were too severe, and too general. There are surely some catches, not only ingeniously composed, but of which the humour is at once pleasant and innocent, and which may, therefore, without *degrading human nature*, in their turn, have admission into good company during times of hilarity, as well as elegies, and the musical *Comedies Larmoyantes*, or *serious glees*, in the more maudlin moments of artificial melancholy. Catches acted on a stage, or *over-acted* in a room, I pretend not to defend. Humour is the gift of too few for it ever to be found equally distributed to a whole club, or company of singers, either in public or private.

Bird

Bird died in 1623, surviving his master Tallis thirty-eight years ; and if we suppose him to have been twenty in the year 1563, when he was chosen organist of Lincoln, he must have been eighty at his decease. Peacham, in his *Complete Gentleman*, speaks of him with great reverence (u) ; as does his pupil, Morley, in his *Introduction*, as well as every professor and musical writer of his own and later times. At this remote period but little, however, can be known of his private life, which was too studious and sedentary to have furnished history, at any time, with events of general interest (x). That he was a diligent cultivator of his art appears from his numerous works, which are more the productions of meditation and study, than of haste and enthusiasm. That he was pious, the words he selected, and the solemnity and gravity of style with which he set them, sufficiently evince. Of his moral character and natural disposition, there can perhaps be no testimonies more favourable, or less subject to suspicion, than those of rival professors, with whom he appears to have lived during a long life with cordiality and friendship. And, of the goodness of his heart, it is, to me, no trivial proof, that he loved, and was beloved, by his master, Tallis (y), and scholar, Morley (z) ; who, from their intimate connexion with him, must have seen him *en robe de chambre*, and been spectators of all the

(u) " For Motets and Musicke of piety
" and devotion, as well for the honour of
" our nation, as the merit of the man, I
" preferre above all others our Phoenix,
" Mr. William Byrd, whom in that kind I
" know not whether any may equall. I
" am sure none excell, even by the judge-
" ment of France and Italy, who are very
" sparing in their commendation of stran-
" gers, in regard of that conceipt they
" hold of themselves. His *Cantiones Sacrae*,
" as also his *Gradualia*, are meere
" angelicall and divine ; and being of him-
" selfe naturally disposed to gravity and
" piety, his veine is not so much for light
" madrigals or canzonets ; yet his *Virgi-
" nella*, and some others in his first set,
" cannot be mended by the first Italian of
" them all." *Second Impression*, p. 100.

(x) With respect to what Ant. Wood asserts in his *Fasti*, that " Bird was excellent in mathematics," it is, in his usual way, supported by no proof ; and indeed mathematics have so little to do with practical Music, either in composition or performance, that those musicians who are most ignorant of the ratio or philosophy of sounds seem constantly to have arrived at the highest degree of excellence in the selection, combination, and refinement of them in practice, by the mere assistance of experience, and the gift of good ears and powerful nerves.

(y) The *Cantiones Sacrae* were composed and published jointly by these great masters in 1575.

(z) His *Introduction* is dedicated to his master Bird.

operations of temper, in the opposite situations of subjection and dominion.

Indeed, the best memorials of a professional man's existence are his surviving works ; which, from their having been thought worthy of preservation by posterity, entitle him to a niche in the Temple of Fame, among the benefactors of mankind. The physician who heals the diseases, and alleviates the anguish of the body, certainly merits a more conspicuous and honourable place there ; but the musician, who eminently soothes our sorrows, and innocently diverts the mind from its cares during health, renders his memory dear to the grateful and refined part of mankind, in every civilised nation.

Of this great harmonist's Sacred Music, besides what is contained in the collections of Dr. Tudway and Dr. Boyce, as admirable monuments still remain in all our cathedrals, it seems the less necessary to insert specimens here. I shall, however, present the lovers of antiquity with a *Sacred* and a *Secular Song*, as examples of his clear and learned style : the first is valuable for the gravity and simplicity of the subjects in fugue, as well as for the purity of the harmony ; and the second is rendered extremely curious by the ingenuity and abilities with which each theme proposed by the *superius* is perpetually answered by the other parts, from the beginning to the end of the composition.

(a) The second of the following compositions, in order to hear the effect of the harmony and contrivance, may be performed as an instrumental piece, with three

violins, tenor, and base ; or sung as a single song, making the *Superius* the vocal part, and the other parts the accompaniments.

SACRED

Sacred Song.

THOMAS MORLEY, a disciple of Bird, Bachelor of Music, and one of the Gentlemen of Queen Elizabeth's chapel, acquired more celebrity by his treatise, entitled, *A plaine and easie* INTRODUCTION to *Practical Musicke*, than by his performance or compositions, though eminent for both.

If due allowance be made for the quaintness of the dialogue and style of the times, and the work be considered as the first regular treatise on Music that was printed in our language, the author will merit great praise for the learning and instruction it contains. At present, indeed, its utility is very much diminished, by the disuse of many things which cost him great pains to explain; as well as by the introduction of new methods of notation, new harmonies, and new modulations, since his time, which, to render intelligible, require a more recent elementary treatise. Yet though this work is redundant in some particulars, and deficient in others, it is still curious, and justly allowed to have been excellently adapted to the wants of the age in which it was written. However, its late republication in the original form, *totidem verbis*, whatever honour it may reflect on the memory of the author, somewhat disgraces later times, which have not superseded this, by producing a better and more complete book of general instructions in English, after the lapse of so many years, and the perpetual cultivation and practice of the art, in our country, both by native musicians and foreigners (a).

Having

(a) ANALYSIS of Morley's *Introduction*:—The *Gammut* and *Time-table* employ the eight or nine first pages of this work. After which, *Moods*, *Ligatures*, *Points of Imperfection*, and *Alteration*, *Augmentation*, and *Diminution*, all now obsolete, occupy fifty pages. The old and exploded proportions given under the names of *Figuration*, *Tripla* in the minim, *Quintupla*, *Sesquialtera*, *Induction*, and *Sesquitercia*, would now be studied *à pure perte*, as no good ear can bear, or sound judgment make use of them.

The second part likewise is wasted in frivolous dialogue and now useless matter. The definitions of concords and discords, indeed, and their use in discant, or plain

counterpoint, are the subjects of conversation; but the knowledge it conveys is so inadequate to present purposes, and the student is led to it by such an indirect road, that it is to be feared he will be so bewildered in the pursuit, as to acquire but little *clear gain* for his trouble. Indeed the prohibitions are such as will lead a student of the present time into doubt and error. Page 75, he utterly condemns, as against the principles of Music, the use of two fifths, though one be *false*. Indeed the use of the *Tritonus* and false fifth is constantly avoided by old harmonists; which is excluding the use of one of the most abundant sources of beauty and passion in modern Music. Whoever first combined the sharp 3d and

7th

Having spoken of Morley as a theorist, I shall proceed to consider his merit as a practical musician. And, in comparing his compositions with those of his predecessors, they do not appear so original as I at first imagined them. During the time of writing his *Intro-*

7th to the 5th of the key, and inverted this chord into $\frac{6}{4}$ to the second, $\frac{6}{5}$ to the sharp seventh, and $\frac{6}{2}$ to the fourth of a key,

conferred as refreshing a benefit on the craving lovers of Music, as Moses on the thirsty Israelites, in producing water with his wand from the rock on mount Horeb. These combinations, though unknown to old masters, are utterly indispensable in the present *Regle de l'Octave*.

To say the truth, Maister Morley is not very nice or accurate in these examples of counterpoint which are given as his own, and left as models of perfection. Page 76, in the last examples, there are two faults, which would not be pardoned by modern ears or judgment: in the first of the two, bar 5, the fourth between C and G, is insipid and unmeaning; and in the second of the examples, bar 5, the modulation from the chord of D major to C, is used *sans liaison*, and, in two parts, without a warrantable or good effect. $\frac{f\sharp g}{D.C.}$ Few of the ex-

amples are elegant, or worthy of imitation, now; and it appears as if the attentive examination of good modern compositions, in score, would be of infinitely more service to a student, than the perusal of all the books on the subject of Music that were written during the sixteenth and seventeenth centuries. Corelli, Handel, and Geminiani, for *Fugues*; Haydn, Vanhal, Boccherini, J. Chr. Bach, Abel, Giardini, &c. for *Symphonies, Quartets, Trios*, and other Music for violins; Alberti, Domenico Scarlatti, Emanuel Bach, Schobert, Eichner, Haydn, and Kozeluch, for *harpsichord and Piano forte pieces*; Pergolesi, Haffé, Jomelli, Galuppi, Piccini, Sacchini, Paefiello, and Sarti, for *vocal compositions*; and, above all, Handel for organ and choral Music: all easy to be found in our own country, and all models of perfection in correctness of composition, knowledge of instruments, rhythm, modulation, new ef-

fects, pathos, fire, invention, and grace.

It has been my wish constantly to do justice to the learning and contrivance of old masters, and to recommend the study and performance of their works to my readers, as curious and historical specimens of the best Music of their own times; but not as the *sole* studies and models of perfection to *young professors*, who wish to please, prosper, and are expected to keep pace with modern improvements. To such I would *first* recommend the study of the best *modern* authors; and then, as matters of curiosity and amusement, to enquire into the productions and genius of former times, in order to extend their knowledge and views, and prevent embarrassment or surprize, whenever they happen to be called upon to perform or speak of such works.

The third part of Morley's Treatise contains more curious specimens of useful knowledge in old counterpoint, than the rest of the book. He is much obliged, however, to Tigrini, whose *Compendium* was published 1588, and others, for many of his examples, whose names ought not to have been concealed. Tigrini has indeed been pillaged with such haste, that a typographical error has not been corrected; a few of these cadences have even been disingenuously disguised, and their places transposed.

Upon the whole, though the book is curious, and full of information concerning the Music of the sixteenth century, it must be owned, that the language in which it is written, is at once uncouth and affected; and that neither the melody nor harmony it recommends and teaches, is of this world, at least, of this age; no certain scale is given of major or minor keys; nor is the modulation he uses, that of the present times. Indeed no keys are determined except F major, and D and A minor; and though so much is written concerning the *moods*, or measure, yet nothing is said of *accent*, or the *preparation, use, and resolution of discords* in general.

duction,

duction, he must of course have consulted the productions of many authors; and he has not done it unprofitably, as a composer, any more than a theorist. It has been said, that “we often remember “ what we read, without recollecting that we ever *had* read it; “ hence it frequently happens, that what we take for invention, “ is only reminiscence (*b*);” which is a charitable apology for seeming plagiarism. The melodies, however, of Morley, are somewhat more flowing and polished than those of the old authors, on whose property his memory, perhaps imperceptibly, had fastened: but, besides these, it is plain that he sometimes condescended to use the same materials as his cotemporaries, and to interweave the favourite passages of the times into his works, of which the following is a chronological list:

<i>Canzonets</i> , or little short Songs, of three voices	-	1593.
<i>Madrigals</i> , to four voices	- - -	1594.
<i>Ballets</i> , or <i>Fa las</i> , to five voices	- - -	1595.
<i>Madrigals</i> , to five voices	- - -	1595.
<i>Canzonets</i> , or little short <i>Airs</i> , to five and six voices		1597.

Of the following publications he was little more than the editor:

<i>Madrigals</i> , to five voices, collected out of the best Italian authors	- - - - -	1598.
--	-----------	-------

The Triumphs of ORIANA, to five and six voices: composed by divers several authors. Newly published by Thomas Morley, Batchelor of Musicke, and Gentleman of hir Majesties honourable chappel (*c*). 1601.

Confort

(*b*) *Essais de Trublet*, To. I. p. 26.

(*c*) These madrigals, in number twenty-four, of which the Music of the 13th and 24th was composed by Morley, were written, set, and published, in honour of Queen Elizabeth, who is figured under the name of *Oriana*. The composers of the rest were Michael Este, Daniel Norcome, John Mundy Batchelor of Music, Ellis Gibbons, John Benet, John Hilton B. M. George Marson B. M. Richard Carlton, John Holmes, Richard Nicholson, Thomas Tomkins, Michael Cavendish, William Cobbold, John Farmer, John Wilby, Thomas Hunt B. M. Thomas Weilkes, John Milton, father of the great poet, George Kirbye, Robert Jones, John Lesley, and Edward Johnson B. M.

As Italy gave the *Ton* to the rest of Europe, but particularly to England, in all the fine arts, during the reign of Queen Elizabeth, it seems as if the idea of employing all the best composers in the kingdom to set the songs in the *Triumphs of Oriana* to Music, in honour of our *Virgin* Queen, had been suggested to Morley, and his patron, the Earl of Nottingham, by Padre Giovenale, afterwards Bishop of Saluzzo,

Confort Lessons, made by divers exquisite authors, for six different instruments to play together, viz. the treble lute, pandora, citterne, base violl, flute, and treble violl. Dedicated to the Lord Mayor, 2d edit. (d) 1611.

A plaine and easie Introduction to Practicall Musicke, 1597 & 1608.

It does not appear that any of Morley's Church Music was printed during his life. Dr. Tudway, however, has inserted several valuable choral compositions, by him, in the collection made for Lord Harley, 1715; among which are his "Funeral or Dirge" "Anthems, as performed at Westminster Abbey at Royal and "Noble Funerals," and printed by Dr. Boyce, in the first volume of his Cathedral Services; and an Evening Verse Service, in five parts, in D minor, which has never been printed. In Queen Elizabeth's Music-book there are likewise five different sets of lessons, or pieces for the virginal, composed by Morley.

As so many of his pieces have been lately printed in score for the new edition of his *Introduction*, I shall only give here, as specimens of his lighter style of composition, the two following canzonets; in the performance of which, those who are not accustomed to the Music of the sixteenth century, will be much embarrassed with the broken phrases and false accents of the melody, in which there is so total a want of rhythm, as renders the time extremely difficult to keep with accuracy and firmness.

luzzo, who employed thirty-seven of the most renowned Italian composers to set *Canzonetti* and madrigals in honour of the *Virgin Mary*, published under the following title: *Tempio Armonico della beatissima Virgine nostra Signora, fabbricato per opera del Reverendo P. Giovenale, A. P. della Congregazione dell' Oratorio. Prima Parte, a tre voci.* Stampata in Roma da Nicolo Mutii. 1599. in 4to.

(d) Master Morley supposing, perhaps, that the harmony which was to be heard through the clattering of knives, forks, spoons, and plates, with the gingling of glasses, and clamorous conversation of a city-feast, need not be very accurate or refined, was not very nice in setting parts to

these tunes, which are so far from correct, that almost any one of the city waits would, in musical cant, have *vamped* as good an accompaniment *sur le champ*, or rather *sur le chant*, which seems the original and true reading of that phrase. (See Vol. II. what has been said of *Extemporary Discant*, p. 142.) I remember, very early in my musical life, to have heard one of the town waits, at Shrewsbury, *vamp a base* upon all occasions, he being utterly unable to read any one that was written; and as my ears were seldom much offended by the dissonance, I suppose that, by habit, he contrived at least to begin and end in the right key, and was quick in pursuing accidental modulation.

CANZONET.

Canzonet. from the 2^d Edit: of Morley's short
songs to 3 voices. Printed 1606.

The Burial Service, set by Morley, which is supposed to be the first that was composed after the Reformation, still continues to be used in Westminster Abbey, on great and solemn occasions (e).

It is uncertain when this ingenious and studious musician died; but it is supposed to have been about the year 1604.

(e) I heard this Service admirably performed in the year 1760, by the three united choirs of Westminster, St. Paul's, and the Chapel-Royal, at the funeral of his late Majesty, George II. in Westminster Abbey, where it had a most solemn effect. Nothing seems better suited to so awful an occasion than this Music, in a minor key, and chiefly in simple counterpoint, but with a grave, and now *uncommon*, harmony and modulation, which added to the grandeur of the effect. The few short points of fugue and imitation introduced in this composition are such as were not common when the service was produced, nor have any of them been debased since by vulgar use. As this composition is so admirably printed by Dr. Boyce, and may be easily consulted, I shall detain the musical reader with a few remarks on it, referring to that copy, without reprinting it here. And I shall begin by observing, that the four first bars are remarkably solemn, and that the major third to G, after being strictly in G minor, the preceding part of the phrase, is unexpectedly grand and pleasing. The point at "And though after my skin, worms destroy this body," is admirably conducted. And, though in simple counterpoint only, the harmony and modulation to "The Lord gave, and the Lord hath taken away," convey something peculiarly majestic and grateful to my ears. The points at "He cometh up, and is cut down," and "Of whom may we seek for succour," diversify and give relief to the plain counterpoint in an ingenious manner; but the passage "Shut not thy merciful ears to our prayers," is extremely beautiful in the three essentials of good Music: melody, harmony, and accent. Every part is *chantante*, or sings, without any seeming subserviency to the rest; and the words, which seldom happens in Music of the sixteenth century, are well expressed, if we except the length given to the particle *to* in the treble and counter-tenor parts, which might easily be

corrected by assigning the two first sounds to the more important word "ears," and allowing only a crotchet to the following preposition. And in this manner the words of many of our old and venerable compositions for the church might be adjusted, in order to obviate the objections that are justly made to the want of attention in their authors to accent and syllabic quantity: and this seems to be infinitely more desirable than the superseding these admirable specimens of choral harmony, in favour of more insipid modern productions, which can boast of no other perfection than that, which, according to Pope, is in the power of every dull grammarian and critic, who "Commas and points can set exactly right." But this alone will not constitute good Music, without genius, invention, melody, harmony, modulation, and variety of measures and effects. I shall only mention one point more in Morley's Burial Service, where the greatest Musical Art is united with the happiest verbal expression, at "Suffer us not at our last hour," and where the supplication is made in each part with great reverence and solicitude. Indeed I see but one passage which I could wish otherwise than the author has left it: and that is at "I heard a voice from Heaven," where the word "from" being in the same harmony as the substantive "Heaven," is insipid and unmeaning. The natural combination for that leading and unaccented part of the bar, seems to be C, with a 6th. I cannot conclude this note without requesting such of my readers as understand and feel good composition, to attend to the solemn, unusual, and pleasing effect produced in many places of this service by mere common chords; particularly at these words, "He fleeth as it were a shadow;" and by the flat 6th given to G, when the ear is habituated to expect a 5th: as at these words, "Blessed are the dead which die in the Lord."

The

The prosperous reign of Queen Elizabeth was perhaps not rendered more illustrious by the musical productions of Tallis, Bird, and Morley, than the performance of Doctor JOHN BULL, whose abilities on the organ and virginal seem to have been truly wonderful. This great musician was born about 1563, in Somersetshire. His Music-master was William Blitheman, organist of the chapel-royal to Queen Elizabeth, in which capacity he was very much celebrated. Bull, on the death of his master, in 1591, was appointed his successor in the Queen's chapel; and in 1596, at the recommendation of her Majesty, he had the honour of being the first that was appointed Music-professor to Gresham college. And though unable to compose and read his lectures in Latin, according to the founder's original intention, such was his favour with the Queen and the public, that the executors of Sir Thomas Gresham, by the *ordinances*, bearing date 1597, dispensed with his knowledge of the Latin language, and ordered "The solemn Musick lecture to be
 " read twice every week, in manner following, *viz.* the thoretique
 " part for one half hour, or thereabouts; and the practise, by
 " concert of voice or instruments, for the rest of the hour:
 " whereof the first lecture *should* be in the Latin tongue, and the
 " second in English.—But because at this time Mr. Doctor Bull,
 " who is recommended to the place by the Queen's most excellent
 " Majesty, being not able to speak Latin, his lectures are permitted
 " to be altogether in English, so long as he shall continue in the
 " place of Music lecturer there (*f*)."

At first, application was made to the two Universities, by the Lord Mayor and corporation of London, jointly with the Mercer's company, left trustees of this institution, to nominate two persons in all the liberal arts fitly qualified to read lectures in their several facul-

(*f*) Ward's *Lives of the Professors of Gresham College*, Pref. p. viii. The first lecture read by Bull, at Gresham College, was printed the same year that it was pronounced, under this title: "The Oration of Maister John Bull, Doctor of Musicke, and one of the Gentlemen of hir Majesties Royall Chappell, as he pronounced the same, beefore divers worshipful per-

sons, the Aldermen and Commoners of the citie of London, with a great multitude of other people, the 6th day of October, 1597, in the new erected Colledge of Sir Thomas Gresham, Knt. deceased: made in the commendation of the founder, and the excellent science of Musicke." Imprinted at London by Thomas Este.

ties;

ties; but this application was not continued, as some jealousy seems to have been awakened at Oxford and Cambridge, lest this new college should be prejudicial to those ancient seats of learning.

What effect this liberal foundation had on other faculties let the friends and patrons of each particular science say; but as to Music, it is hardly possible to read the lives of the Professors without lamenting that the design of so noble an institution, established on such an extensive plan, should be so entirely frustrated as to become wholly useless to that city and nation for whose instruction it was benevolently intended. Dr. Bull, the only person on the list of Music professors, who seems to have been able to inform by theory, or amuse by practice, those who attended the musical lectures, resigned his professorship in 1607 (g). So that except about nine years from the date of the establishment, to the present times, it does not appear that the science of sound, or practice of the musical art, has been advanced by subsequent professors. For in the following list, given by Dr. Ward, up to the year 1740, including Dr. Clayton, elected 1607; John Taverner, 1610, who was no relation of the musician of that name, mentioned in the second volume; Richard Kight, 1638; William Petty, 1650, afterwards the famous Sir William Petty; Dr. Thomas Baynes, 1660; William Perry, 1681; John Newy, 1696; Dr. Robert Shippen, 1705; Dr. Edward Shippen, his brother, 1710; John Gordon, 1723; and Thomas Brown, 1739; though all men of learning and abilities in other faculties, yet no one of them had ever distinguished himself, either in the theory or practice of Music; nor are any proofs remaining that they had ever studied that art, the *arcana* of which they were appointed to unfold! What an abuse of reason and munificence does it seem, that those who had never meditated on the art, or been taught, themselves, should be fixed upon to teach, and direct the studies of others!

A silly story has been told by Ant. Wood (b), concerning a feat

(g) Indeed during more than a year of his professorship, Mr. Thomas Bird, son of the venerable William Bird, exercised the office of a substitute to Dr. Bull, while he

travelled on the continent for the recovery of his health.

(b) *Fasti Oxon.* Vol. I. c. 131.

performed by Dr. Bull, who, at St. Omer's, when he first visited the continent, to a composition originally written in forty parts, added forty more in a few hours; which is so impossible, as not to be worth relating.

After the decease of Queen Elizabeth, he was appointed organist to King James. And July the 16th, 1607, when his Majesty and Prince Henry dined at Merchant-Taylor's hall, the royal guests were entertained with Music, both vocal and instrumental, as well as with several orations. And while his Majesty was at table, according to Stow, "Mr. Doctor Bull, who was free of that company, being in a citizens gowne, cappe, and hood, played most excellent melody upon a small payre of organs, placed there for that purpose onely (i)." In December, of the same year, he resigned his professorship of Gresham college, but for what reason does not appear, as he continued in England several years afterwards.

In 1613 he quitted England, and entered into the service of the Archduke, in the Netherlands. He afterwards seems to have been settled at Lubeck, at which place many of his compositions in the list published by Dr. Ward, are dated; one of them as late as 1622, the supposed year of his decease.

Dr. Bull has been censured for quitting his establishment in England; but it is probable that the increase of health and wealth was the cause and consequence. Indeed he seems to have been praised at home, more than rewarded; and it is no uncommon thing for one age to let an artist starve, to whom the next would willingly erect statues. The professorship of Gresham college was not then a sinecure. His attendance on the chapel royal, for which he had forty pounds per annum, and on the Prince of Wales, at a similar salary, though honourable, were not very lucrative appointments for the first performer in the world, at a time when scholars were not so profitable as at present; and there was no *public playing*, where this most wonderful musician could display his abilities, and receive their due applause and reward.

(i) *Chron.* p. 891. edit. 1615.

A list of more than two hundred of Dr. Bull's compositions, vocal and instrumental, is inserted in his Life, which, when it was written in 1740, were preserved in the collection of Dr. Pepusch. The chief part of these were pieces for the organ or virginal; near sixty of them I have now before me, in the Music-book of Queen Elizabeth, and the printed collection, called *Parthenia*. An *In nomine*, of five parts, I have scored from the Christ Church set of manuscript books in Dr. Aldrich's collection, and have attentively perused his choral composition in the collections of Dr. Tudway and Dr. Boyce, which is the same verse anthem, with different words, for two voices, with a chorus (*k*). In all his vocal Music that I have seen, there seems to be much more labour and study, than genius. Tallis and Bird had so long accustomed themselves to write for voices, that the parts in their compositions are much more natural and flowing than those of Bull. In looking at the single parts of Tallis and Bird, there are notes and passages which appear wholly insipid and unmeaning, as melody; but which, when heard in harmony with any other part, produce admirable effects.

Indeed, possessed as he was of such extraordinary powers of execution on keyed-instruments, I have been frequently astonished, in perusing Dr. Bull's lessons, at the few new and pleasing passages which his hand suggested to his pen. It has been said, that the late Dr. Pepusch preferred Bull's compositions to those of Couperin and Scarlatti, not only for harmony and contrivance, but air and modulation: an assertion which rather proves that the Doctor's taste was *bad*, than Bull's Music *good*. Though I should greatly admire the hand, as well as patience, of any one capable of playing his compositions; yet, *as Music*, they would afford me no kind of pleasure: *Ce sont des notes, & rien que des notes*; there is nothing in them which excites rapture. They may be heard by a lover of Music with as

(*k*) In Dr. Tudway's MS. the words are "Almighty God, who by the leading of a star;" and in Dr. Boyce's printed copy, "O Lord my God, I will exalt thee." In Dr. Ward's list of Bull's works, we have the initial words of the following anthems:

"Deliver me, O God;" "In thee, O Lord;" with two *Misereres*, one of two, and another of three voices; an *In nomine*, of five parts; and five madrigals and motets, to English words, for four, five and six voices.

little emotion as the clapper of a mill, or the rumbling of a post-chaise.

After such frequent mention of the extreme difficulty of these old pieces, in mercy to modern performers, it may with truth be said, that the loss, to refined ears, would not be very great, if they should for ever remain unplayed and undeciphered. For being generally built on some old and vulgar psalmodic tunes, unmeaning in themselves, the crowded harmony and multiplied notes with which they are loaded, have not rendered them more pleasing. Indeed the infallible consequences of a young practitioner bestowing such time and labour on them as may be necessary to subdue the difficulties of execution they contain, would be corruption of taste, and neglect of more useful studies. A preference to such obsolete Music, at the exclusion of all other, would be like studying and speaking no other language than that of Chaucer, which, though once the dialect of the Court, is now, if used at all, only that of the lowest clowns and rustics, in provinces the most remote from the capital.

The Instrumental Music of Queen Elizabeth's reign seems to partake of the pedantry and foppery of the times: eternal fugues upon dry and unmeaning subjects were the means of establishing reputation for *learning* and *contrivance*; as dull divisions and variations, in which the change was generally from bad to worse, seem to have been the only qualifications which entitled a professor to eminence for *taste* and *invention*.

The very terms of *Canon* and *Fugue* imply restraint and labour. Handel was perhaps the only great Fughist, exempt from pedantry. He seldom treated barren or crude subjects; his themes being almost always natural and pleasing. Sebastian Bach, on the contrary, like Michael Angelo in painting, disdained facility so much, that his genius never stooped to the easy and graceful. I never have seen a fugue by this learned and powerful author upon a *motivo*, that is natural and *chantant*; or even an easy and obvious passage, that is not loaded with crude and difficult accompaniments.

As the youth of Bull must necessarily have been spent in subduing the difficulties of other composers, he seems, in his riper years,
to

to have made the invention of new difficulties of every kind, which could impede or dismay a performer, his sole study. It seldom happens that those possessed of great natural force of hand, on any instrument, submit to the drudgery of much dry study; but this gift was so far from relaxing the labour and diligence of Dr. Bull, that he entered deeper into all the *arcana* of the art, and pedantry of the times, than most of his cotemporaries. That he was “exquisitely skilled in canon,” has been given as one of the most irrefragable proofs of his being a great musician; and canons, *recte et retro*, and *per arsin et thesin*, in triangular, and other fantastical forms, are carefully preserved, as stupendous specimens of his abilities.

Walsingham has been a subject upon which Dr. Bull and Bird have exercised their abilities in the most elaborate manner. In the fifteenth century, popular tunes were the foundations upon which the greatest contrapuntists constructed even the masses which they set to Music; and in the next, the English, no longer in want of these tunes in the church, polished, and tricked them up for the chamber, with every art and embellishment they could devise.

Both Bird and Bull have likewise worked on the hexachord, *ut re mi fa sol la*, ascending and descending; upon which theme they have constructed elaborate and ingenious lessons, of the most difficult execution. That of Bull has passages for the left hand, which perhaps none but himself could play during his own time, and which I have never seen introduced in any compositions of the present century, except those of Sebastian Bach, or heard executed, but by Palscha, near forty years ago; who must have vanquished them by the incessant labour of several years, out of his short life; for he was then but eight years old. A new, but similar difficulty, has lately been devised for keyed-instruments, in the rapid divisions for one hand, in *octaves*, which great application only can vanquish. The execution of long and rapid divisions of thirds and sixths, and even of common chords, is not frequently wanted in modern Music, and therefore they would baffle and embarrass the greatest performers, who have not worked at such passages with unremitting labour. But besides these difficulties, there are others

of *measure*, in Bull's Lessons, where, in four parts, the left hand has two of six crotchets in a bar, while the right plays nine to each semibreve of the hexachord.

Specimens of the difficulties abounding in the compositions of the golden age of Queen Elizabeth, shall be laid before the musical reader, in order to invalidate the vulgar cant of such as are determined to blame whatever is modern, and who, equally devoid of knowledge and feeling, reprobate as *trash* the most elegant, ingenious, and often sublime compositions, that have ever been produced since the laws of harmony were first established.

Indeed, we should suppose that the pieces of Bull were composed to be *tried*, not played; for private practice, not public use; as they surpass every idea of difficulty that can be formed from the lessons of Handel, Scarlatti, Sebastian Bach; or, in more modern times, Emanuel Bach, Mützel, and Clementi.

There are near twenty lessons in Queen Elizabeth's book, by GILES FARNABY, little less difficult than those of Bird and Bull (l). These great musicians, the wonder and delight of their times, seem to have had no conception of brilliancy or embellishment, but what arose from breaking common chords into *Arpeggio*, or rapidly running up and down the scale in notes tied three, and often four times. They seem, however, to have been the greatest players in Europe, till Frescobaldi introduced a superior style of treating the organ, divested of rapid and frivolous divisions, which disgrace that most noble and comprehensive of all instruments (m).

At present, the pieces of Bird, Bull, and Farnaby, must doubtless appear dry and monotonous, for want of air, variety of movement, and modulation; yet before these qualities were cultivated, expected, or indeed existing, they fed the ear with pure and simple harmony,

(l) Giles Farnaby was of Christ Church, Oxford, and, in 1592, admitted Bachelor of Music. There are extant of his compositions, *Canzonets to four voices, with a Song of eight parts*, London, 1598. He assisted Ravenscroft in putting parts to some of the Psalm-tunes, published at the beginning of the next century.

(m) We shall have occasion hereafter to

speak of this admirable musician, whose fugues upon marked and pleasing subjects, were treated with such genius and learning, as have never been surpassed, unless by those of Sebastian Bach and Handel, which seem to include every perfection of which this ingenious and elaborate species of composition is capable.

in a manner which none but keyed-instruments could effect; and perhaps their favour with professional musicians was not a little augmented, by the learning of their contexture, and difficulty of execution. For however the old masters may be celebrated for their simplicity and sobriety of style, and the moderns indiscriminately censured for multiplied notes, rapidity of performance, tricks, whipsyllabub, froth, tumbling, and mere difficulties; it would not be very easy to find, among the most complicated pieces of modern times, difficulties equally insurmountable with those in which these old *Fancies* and variations abound.

Before I quit the organ and virginal pieces in Queen Elizabeth's book, it may be worth remarking, that throughout the collection, consisting of upwards of four hundred folio pages, written extremely small and close, no transposed keys are used; all the pieces being confined to the modes of the church, in which no sharp was ever placed on the clef; or flat, except sometimes on B: so that few of the keys are determined by such characteristic intervals or modulation, as at present belong to each of the twenty-four.

In the following tune, called *Dr. Bull's Jewell*, of only three strains of eight bars each, the modulation from C natural to B flat, and from B flat to C, is sudden and violent in the first part, though it begins and ends in the same key; in the second part, the transition from G natural to B flat, and then back again to G, is unexpected by modern ears. And in the last strain, after the second had closed in G natural, the modulating instantly into F, is such a violation of all present rules and sensations, as seems rude and barbarous. Indeed Bull seems to have had a bad taste in modulation, and to have been as harsh and strained in this particular, as Bird was natural and pleasing.

I shall insert here likewise, from the same Virginal Book, an *Allemand*, by old Robert Jhonson (*n*), as a proof how much secular modulation was governed by ecclesiastical, and how undetermined the keys were, at this time, by any rules in present use. This short air begins in D minor; but in the first bar, we have

(*n*) See Vol. II. p. 566 and 593, an account and specimen of this composer.

the chord of C natural, as fifth of the key of F; then, at the third bar, the author returns, in no disagreeable manner, to D minor, ending, in the church style, with a sharp third. The second part is chiefly in D and G minor, but ends, *alla Capella*, in D major (o).

On the following plates, the musical reader will not only find specimens of *Bull's Difficulties*, with tunes by him and old Jhonson, but the favourite ancient ballad-air, called *Fortune*, mentioned above, p. 87.

(o) Padre Martini (*Saggio di Contrap. prima Parte*, 23.), recommends the terminating minor movements with a sharp third; a practice which Rousseau (*Dict. de Mus.*) censures as Gothic, and a proof of a bad taste. If the first of these excellent writers wished only to preserve its use in the church, and the second to banish it elsewhere, they were both right, however their opinions may seem to clash. The learned author of the *Saggio di Contrapunto*, who was so perfectly acquainted with all the beauties and effects of Choral Music, is certainly more to be relied on in whatever concerns it, than the animated author of the *Dictionnaire de Musique*; who, with the most refined taste and exalted views, with respect to Dramatic Compositions, had neither time nor opportunity sufficiently to explore the mysteries of *Canto fermo*, or to become a very profound

contrapuntist. For my own part, though I never wish to hear a *Song* in a minor key, end with a sharp third, which the French call *Tierce de Picardie*, on account of the great number of cathedrals in that province, where it continues still in use; yet there is something so solemn and grateful in these terminations of ecclesiastical compositions, that I should be very sorry if the practice were not continued. And if we consider the relation and composition of the several stops in an organ, we shall find, that as every single key in the chorus of that instrument has a complete chord with a sharp third to it, when we dwell on a chord with a flat third, while the *tierce*, *cornet*, *fesquialter*, and sometimes the *furniture*, are sounding the sharp third, it affords an additional reason for the origin and continuance of the practice, besides the peculiar properties of tonal modulation.

Specimens of D^r Bull's difficult Passages, from Queen Elizabeth's Virginal Book.¹¹⁵
Variations to the Accompaniments of the Hexachord.

Doubling upon Jig time.

Fragments of N^o 13.

15

System 1, measures 15-18. Treble and bass staves with 6/4 time signature. The music features a complex, fast-moving melody in the treble and a more rhythmic accompaniment in the bass.

19

System 2, measures 19-22. Treble and bass staves with 9/8 time signature. The music continues with a similar melodic and rhythmic style. A small '&c' marking is present below the bass staff in measure 20.

System 3, measures 23-26. Treble and bass staves with 9/8 time signature. The musical texture remains consistent with the previous systems.

System 4, measures 27-30. Treble and bass staves with 9/8 time signature. The music continues with a similar melodic and rhythmic style.

Fragments of a Miserere in 3 parts.

System 5, measures 31-34. Treble and bass staves with common time signature. The music is marked 'Fragments of a Miserere in 3 parts.' and features a more melodic and less rhythmically complex style than the previous systems.

System 6, measures 35-38. Treble and bass staves with common time signature. The music continues with a similar melodic and less rhythmically complex style. The system ends with a 'w' marking on the treble staff and '&c' and 'w' markings on the bass staff.

Dr Bull's Jewel.

Alman, by Robert Jhonfon.

(a) A Point which continued in favour from the time of JUSQUIN to that of HANDEL, is here well adjusted to the Manual of Keyed-Instruments.

Fortune, set by Bird for the Virginal, with Variations.

(b) For account of this Tune, see above, Page 87.

Our secular Vocal Music, during the first years of Elizabeth's reign, seems to have been much inferior to that of the church, if any judgment can be fairly formed of it from a Book of Songs, printed by John Daye, in 1571, under the following title:
 " Songes of three, fower, and five voyces, composed and made by
 " Thomas Whythorne, Gent. the which Songes be of fundrie
 " fortes, that is to say, some long, some short, some hard, some
 " easie to be songe, and some between both; also some solemne,
 " and some pleasaunt or mery: so that according to the Skil of the
 " Singers, (not being Musitians), and disposition or delite of the
 " Hearers, they may here find Songes to their contentation and
 " liking."

Both the words and music of these Songs, which were published before those of Bird had appeared, are truly barbarous; but it is not now certain that they were ever in much public favour. We have at present Music-books published in England, every day, without genius or science to recommend them. Now, if it should happen that one of these, by escaping the broom of Time, should reach posterity, and fall into the hands of some future antiquary, critic, or historian, who should condemn *all* the compositions of the present age by *one*, that had, perhaps, been never performed or heard of by cotemporary judges and lovers of good Music, the sentence would surely be very unjust.

Our countrymen were not at first taught to admire the Music of Italy, by the sweetness of the language to which it was originally set, or by fine singing, but by Italian madrigals, with a literal translation into English, adjusted to the original Music, and published by N. Yonge, 1588 (*p*). These being selected from the works of Palestrina, Luca Marenzio, and other celebrated masters on the continent, seem to have given birth to that passion for madrigals

(*p*) MUSICA TRANSALPINA, *Madrigales translated of four, five, and sixe parts, chosen out of divers excellent Authours; with the first and second Part of la Virginella, made by Master Bird upon two Stanzas of Ariosto, and brought to speak English with the rest.* The

editor was an Italian merchant, who having opportunities of obtaining from his correspondents the newest and best compositions from the continent, had them frequently performed at his house, for the entertainment of his musical friends.

which

which became so prevalent among us afterwards, when the composers of our own nation so happily contributed to gratify it.

If allowance be made for the wretched state of Lyric Poetry in England at the time these madrigals were translated, which was long before the publication of the sonnets of Spencer, or Shakspeare, the undertaking seems to have been tolerably executed. Indeed, sometimes with such care and felicity as to transfuse the expression of the original words into that of the version. The Italians themselves, at this time, had but little melody or rhythm in their Music; but their Poetry having been long cultivated, and brought to a much greater degree of perfection than ours could then boast, it indicated to the musical composer traits of melody, more airy and marked, perhaps, than we could derive from the prosody or phraseology of our own language. The translator of these madrigals, whoever he was, for the editor does not tell us, seems in general to have imitated the original Italian measure and structure of verse, as well as ideas; and though they abound with *Concetti*, to which not only Italian poets, but those of all the rest of Europe were then so much addicted, the general taste of the times was indulged in Poetry as well as Music, and metre and melody were at once furnished with new models.

If these books were not become too scarce for such observations, to be worth writing or perusal, I could point out several of the particular madrigals, where the verbal accent and poetical passion have been happily transferred to the Music, by the translation: as Number V. by Baldassar Donato, "O grief, if yet my grief be not believed, cry with thy voice out-stretched," &c.

However, the perpetual double rhymes in Italian madrigals and sonnets have so much distressed our translator to supply them in English, that, as the preservation of the original Music obliged him to render his version *totidem syllabis*, his embarrassments on this account are sometimes truly ridiculous (q). No. VII. in which the
old

(q) It seems as if the constant double rhymes in Italian poetry, which throw the accent on the penultima, instead of the final

syllable, of a verse, gave a peculiar cast to the melody in which it is clothed, and rendered it specifically different from that
of

old British termination of the present tense of the indicative mood of our verbs is conveniently preserved, was doubtless not thought the worst, as it is applied to several compositions in the collection.

In vayne he seeks for beauty that excelleth,
That hath not sene hir eyes where Love sejorneth,
How sweetly here and there the same she turneth.
He knows not how Love heateth, and he quelleth,
That knows not how she sighes, and sweet beguileth,
And how she sweetly speakes, and sweetly smileth (r).

These madrigals were celebrated, near forty years after their publication, by Peacham, who has pointed out the peculiar excellence of several, particularly those of Luca Marenzio, which, he says, "are Songs the Muses themselves might not have been ashamed to have composed;" and of those by Alfonso Ferrabosco, the Father, he says, "they cannot be bettered for sweetness of ayre and depth of judgment." Upon the ditty (words) of one of these, *I saw my Ladie weeping*, (he says) Master Byrd, and Alfonso, in a friendly emulation, exercised their invention." The words of the *Nightingale*, and *Fayre Susanna*, were so much admired, that they seem to have been set by all the best composers of the times. A few lines of each will perhaps convey to the reader an adequate idea of the poetical beauty of these favourite songs.

THE NIGHTINGALE.

But my poore hart with sorrowes over-swelling,
Through bondage vyle, binding my freedom short,
No pleasure takes in these his sports excelling,
Nor of his song receiveth no comfort.

FAYRE SUSANNA.

To them she sayd, if I, by craft procur'd,
Do yeld to you my body to abuse it,

of English songs, in which but few double rhymes occur. The constant and regular mixture of masculine and feminine rhymes in French poetry may likewise have had a latent effect on the vocal melody of France, different from that of the other two neighbouring nations. But, after mentioning these suspicions, I shall leave the further investigation of so subtle a subject to philosophers, not only possessed of the necessary knowledge, but an equal zeal for the cultivation of Philology, Poetry, and Music.

(r) These lines, if we substitute the modern termination of the present tense, would be much less uncouth than they now appear. And the last couplet will remind the classical reader of Horace's

Dulce ridentem Lalagen amabo, dulce loquentem.

No. II. of the second set is still a better specimen:

"Zephyrus brings the thyme that
"sweetly scenteth."

I lose

I lose my foule ; and if I shall refuse it,
 You will me judge to death reproachfully.
 But better it is in innocence to chuse it,
 Then by my fault t'offend my God on hye.

Indeed, in more than twenty sets, published between the year 1588 and 1624, during a period of near forty years, including almost four hundred and fifty madrigals and songs in parts, it would be difficult to find any one, of which the words can be perused with pleasure (*t*). The sonnets of Spenser and Shakspeare, many of which are worthy of their authors, were indeed not published till about the end of the sixteenth century ; but afterwards, it is wonderful that none of them were set by our best musical composers, except one of Shakspeare's, which will be mentioned hereafter.

The second collection of the same kind that appeared in England, was published in 1590, by Thomas Watson, Gent. under the following title : “ The First Part of Italian Madrigals Englished, not “ to the Sense of the original *Dittie*, but after the Affection of the “ Noate.” This collection, as we are told in the title-page, includes “ Two excellent Madrigalls of Master William Byrd's, composed after the Italian Vaine, at the Request of the said Thomas “ Watson.” The poet is as much distressed for double rhymes to suit the stanza and Music of these madrigals as in the former publication. That indeed which Bird set, first in four parts, and then in six, seems original English, and is the best of the collection.

This sweet and merry month of May,
 While Nature wantons in her prime,
 And birds do sing, and beasts do play,
 For pleasure of the joyful time ;

I chose, the first for holly daie,
 And greet Eliza with a ryme :
 O beauteous Queene of second Troy,
 Take well in worth a single toy.

The editor seems to have been a man of some learning, as well as knowledge in Music, as he dedicates the work, in a Latin copy

(*t*) Those genuine English songs, set in some of which there is not only wit, but
 and published by Bird, must be excepted, poetry.

of verses, to the Earl of Essex, then at the summit of favour with Queen Elizabeth; and addresses Luca Marenzio, from whom most of the madrigals were taken, in another.

In 1597, Yonge published a second collection of madrigals, out of sundry Italian authors; in which, among others, there are three by Croce, three by Luca Marenzio, and six by Ferabosco. The words of these have as little claim to poetical merit as those of the former set. There is, however, some Bacchanalian humour, perhaps, in the following, applied to the Music of Ferabosco.

“ The wine that I so deerly got,
Sweetly sipping, my eyes hath bleared
And the more I am bar'd the pot,
The more to drink my thirst is stered;
But since thereby my heart is chered,
Maugre ill-luck and spiteful slanders,
Mine eyes shall not be my commanders;
For I maintaine, and ever shall,
Better the windows bide the dangers,
Than to spoil both house and all.”

In Morley's collection, of the same kind (*u*), published 1598, the words are still more unmeaning and ungrammatical, than in the three preceding collections.

In 1597, Thomas Weelkes and George Kirbye published their First Books of English Madrigals; in 1598 appeared those of John Wilbye; and the year following, Thomas Bennet's.

Of these four composers, the best madrigalists of our country, many productions have lately been revived at the Concert of Ancient Music, and Catch-Club; where, by the perfection of performance, effects have been produced, of which it is probable the authors themselves, even in the warm and enthusiastic moments of conception, had but little idea: so that from the care, accuracy, and expression, with which they are sung by the performers of these well-disciplined societies, it may perhaps with truth be said, that they are not only renovated, but rendered much better compositions than the authors intended them to be.

Of the excellent madrigals by GEORGE KIRBYE, as several have lately been revived at the Concert of Ancient Music, and Catch-

(*u*) *Madrigals to five voices, selected out of the best Italian authors.*

Club, there seems the less necessity to insert specimens, or give a further account of them here.

In the first set of madrigals, by JOHN WILBYE, the following are well known: *Lady, when I behold the roses sprouting*; — and *Flora gave me fairest flowers*; — but *Hard by a crystal fountain*, which, according to Hearn (x), used to be annually sung by the Fellows of New college, Oxon, I am unable to find. These words are adjusted to the Music of Giov. Croce, in the second book of *Musica Transalpina*, and are set by Morley in the *Triumphs of Oriana*; but appear not either in the first or second set of madrigals, published by Wilbye, and I know of no other.

JOHN BENNET, one of our best madrigalists, seems to have a melody more phrased and *chantante* than most of his contemporaries. Besides his *Madrigals to four voices*, published in 1599, mentioned above, and of which several have lately been called into notice by the admirers of Old Music, he contributed largely to the compositions inserted in a work published by Thomas Ravenscroft in 1614, entitled, *A briefe Discourse of the true but neglected Use of charact'ring the Degrees in mensurable Musicke*, &c. But as this is a theoretical tract belonging to the next reign, its merit will be considered hereafter.

In the first set of madrigals by THOMAS WHEELKES, to three, four, five, and six voices, of the II. III. and IV. the words are by Shakspeare, and were published, with the Music, two years before they appeared elsewhere. In 1599, however, they were inserted in our great Dramatist's collection of poems, called the *Passionate Pilgrim*, to which he prefixed his name. In 1600, they likewise had a place in a collection of songs by different authors, under the title of *England's Helicon* (y). Many of Wheelkes's madrigals are well known, and justly ranked among the best secular compositions of the time; I shall, however, give, as a specimen of his style, the three that were written by Shakspeare, not because the Music is superior to the rest, but because the words were produced by an author whose memory is so dear to the nation, that every fragment of his works becomes daily more interesting.

In scoring most of the twenty-four madrigals in the *Triumphs of Oriana*, so frequently mentioned, though no less a number than twenty-two different composers were employed, and among these, Bennet, Kirby, Weelkes, Wilbye, and Morley, they all resemble each other so much in modulation and style, that they might very well pass for the productions of one and the same composer. There is no one that towers above the rest sufficiently to give a modern ear the least idea of invention or originality (z). However, it is but candid and natural to suppose, that many passages and traits of harmony, which now seem dull, vulgar, and common, were comparatively ingenious, elegant, and new, at the beginning of the seventeenth century.

The most agreeable madrigal in this collection seems to be the twelfth, composed by William Cobbold, a musician, whose name occurs no where else, within my reading and memory, except in Thomas Este's edition of the Psalm-tunes, in parts, 1591. The beginning, however, of this madrigal is not very happy; and the modulation, throughout, is chiefly confined to the key-note, and its fifth. Yet, at the fourth bar, a pleasing subject is led off, and pursued with ingenuity; and as there are several other points, in the course of this song, which discover art and experience in the composer, I should insert it here as a specimen of the contents of this celebrated publication, were it not too long.

We should suppose, from the words of these madrigals, that our *Lyric Poetry*, which has never been much cultivated by real judges and lovers of Music, was in a state of utter barbarism when they were written; if the sonnets of Spenser and Shakspeare did not bear

(z) The harmony of these *Minor Musicians*, or second class of English masters of the sixteenth century, is pure and regular; but, however well received, and justly admired by their contemporaries, they are, in general, so monotonous in point of modulation, that it seldom happens that more than two keys are used from the beginning to the end of a movement; which renders the performance of more than one or two at a time, insipid and tiresome. "If," says a worthy Nobleman, and enthusiastic ad-

miration of Handel, "some of that great master's oratorio choruses were well performed, by voices *only*, in the manner of madrigals, how superior would their effect be to the productions of your Bennets, Kirbys, Weelkes's, and Wilbye's!" The idea was so just, that I wish to hear it put into execution: as there is doubtless more nerve, more science, and fire, in the worst of Handel's choruses, than in the greatest efforts of these old madrigalists.

testimony to the contrary. Indeed Bird's songs, published long before, contain considerable poetical merit, for the time; and it is to be feared that the blame will ultimately fall on the *musical composers*, who seem to have been more deficient in taste and judgment, than the nation in good poets, when they set such wretched trash to Music. These madrigals or songs, written in honour of a great and learned Queen; dedicated to the Earl of Nottingham, one of the first Nobles of her Court, who is said to have stimulated exertion in the poets and musicians of the time, by a prize; and set and published by one of the Gentlemen of her Chapel, in conjunction with the best musicians then alive; are inferior, in poetry, to the present Christmas carols of London bell-men.

Some of the other composers employed in the *Triumphs of Oriana*, having distinguished themselves elsewhere, have a title to particular notice here; though they continued to flourish late in the next reign. These are John Mundy, Michael Este, John Hilton, Thomas Tomkins, John Farmer, and John Milton: of whose compositions I shall speak "as they are—nothing extenuate, or set down aught in malice;" nor shall I ever praise, or censure upon system, by previously determining, unheard and unexamined, that the ancient Music is *always* better than the modern, or the modern than the ancient. The rest being of the common mass of musicians, who contributed but little, either by invention or refinement, towards the advancement of their art, have no claim to a separate niche in its annals.

JOHN MUNDY, Bachelor of Music, and one of the Organists of her Majesty's free chapel of Windsor, was an able performer on the organ and virginal, as is manifested by several compositions for those instruments, preserved in Queen Elizabeth's Virginal Book; and among the rest, a *Fantasia*, in which he endeavours to convey an idea of *Faire Wether*; *Lightning*; *Thunder*; *Calme Wether*, and a *Faire Day*; in which attempt, if he has failed, it was not for want of hand, as the passages are such as seem to imply a great command of the instrument. Some of his Songs, and Psalms, which I have scored, are above mediocrity in harmony and design. I think

I think I can discover more air in some of his movements than in any of his cotemporary musicians of the second class (a).

MICHAEL ESTE, Bachelor of Music, and Master of the Boys of Litchfield cathedral, has little concern with Queen Elizabeth's reign, except in setting one of the madrigals in the *Triumphs of Oriana*. He was a very voluminous composer of madrigals, and other Vocal Music; having published six books, of three, four, five, and six parts; which, in the beginning of the last century, either from the constancy of the public, or the barrenness of the composers, was sufficient to give him the reputation of great fertility. One of his three part songs, *How merrily we live*, has been lately revived, and honoured with the public favour, and there are several others among his works, that equally deserve it.

Of JOHN HILTON, an early publisher, and an ingenious composer of *Catches*, we shall likewise have occasion to speak at a later period; for though he furnished a madrigal to the *Triumphs of Oriana*, in 1601, he continued to flourish more than fifty years after.

THOMAS TOMKINS, a scholar of Bird, M. B. and Gentleman of his Majesty's chapel, was an excellent musician. He published songs of three, four, five, and six parts, without a date. It has been imagined that they were printed *before* the year 1600; but there are two stubborn circumstances against this conjecture: the first is, that in the very title of his book, he calls himself organist of his Majesty's chapel royal; which certainly throws the publication into the reign of King James I. who was crowned in 1603; the second is likewise furnished in the body of the book itself, where he dedicates each song to some relation, friend, or eminent musician; and among the rest, the twenty-fourth song is addressed to *Mr. Dr. Heather*. Now it is upon record, that Heather, who founded the Music-Professorship at Oxford, was honoured with his degree of Doctor in that university, May 18th, 1622; and as another of these songs is dedicated by Tomkins to his "ancient and much revered master, William Bird," who died 1623, it seems to fix the time of the publication to be the latter end of the year 1622, or beginning of 1623.

(a) See above, his *Four-part Song*, already printed, p. 55.

There

There are two very curious compositions by Tomkins, in the third volume of Dr. Tudway's collection, in the British Museum: the one is a full anthem, in twelve parts; and the other an anthem in canon throughout, of four parts in one, both well worthy the disciple of the admirable Bird. Indeed, by the compositions I have scored, or examined in score, of Tomkins, he seems to me to have had more force and facility than Morley. In his songs there is melody and accent, as well as pure harmony and ingenious contrivance.

JOHN FARMER published his *First Set of English Madrigals, to four voices*, in 1599; professing in his preface to have "fully linked his Musick to *number*, as each gives to other their true effect, which is to move delight; a virtue," he adds, "so singular in the Italians, as under that ensign only they hazard their honour." This boast made me examine his accentuation of the words of his madrigals, with some expectation of finding greater accuracy in that particular, than was general at the time; but, on the contrary, his assertion is so far from true, that there appears more *false accent* in his songs, than in those of his cotemporaries.

We come now to JOHN MILTON, the father of our great poet, who, though a scrivener by profession, was a voluminous composer, and equal in science, if not genius, to the best musicians of his age; in conjunction, and on a level with whom, his name and works appeared in numerous musical publications of the time, particularly in those of old Wilbye; in the *Triumphs of Oriana*, published by Morley; in Ravenscroft's *Psalms*; in the *Lamentations*, published by Sir William Leighton; and in MS. collections, still in the possession of the curious (b).

(b) Mr. Warton, in his *Notes upon Milton's Poems on Several Occasions*, tells us, from the MS. *Life of the Poet*, by Aubrey, the antiquary, in the MS. Ashm. Oxon. that "Milton's father, though a scrivener, was not apprenticed to that trade: having been bred a scholar, and of Christ Church, Oxford; and that he took to trade in consequence of being

"disinherited." Mr. Warton therefore observes, that Milton, in his Latin Epistle to his father, addresses him in a language which he understood. Aubrey adds, "that the elder Milton died very old in 1647, and was interred from his house in Barbican, in St. Giles's church, Cripplegate; where the great Poet was afterwards buried, near his father, in 1674."

His

His son celebrates his musical abilities in an admirable Latin poem, *Ad patrem*, where, alluding to his father's musical science, he says, that Apollo had divided his favours in the sister arts between them; giving Music to the father, and Poetry to the son.

*Nec tu perge, precor, sacras contemnere musas,
Nec vanas inopesque puta, quarum ipse peritus
Munere, mille sonos numeros componis ad aptos,
Millibus et vocem modulis variare canoram
Doctus, Arionii merito sis nominis hæres.
Nunc tibi quid mirum, si me genuisse poetam
Contigerit, charo si tam prope sanguine juncti
Cognatas artes, studiumque affine sequamur?
Ipse volens Phæbus se dispertire duobus,
Altera dona mihi, dedit altera dona parenti,
Dividuumque Deum genitorque puerque tenemus (c).*

Ver. 56. usque 66.

His effusions of gratitude for the education he had received from his parent's bounty, and his apology for cultivating poetry, of which he gives a charming eulogium, seem to contain ideas as beautiful and sublime, as any in his *Paradise Lost*.

There was, at this time, a kind of maudlin piety, which had seized Christians of all denominations; among Calvinists it exhaled itself in Psalmody; and in others, not less dolorous, in *Lamentations* (d). The Italians sung them in Latin, like the *Salmi Penitentiali*; and of both, as well as others in their own language, the sixteenth century was extremely prolific. In these Lamentations, whence I shall give one that was set by Milton's father, the poetry is too mean and gloomy for any readers but modern saints or methodists: indeed some of it seems much inferior to that of Sternhold and Hopkins. However, the best English composers

(c) Nor blame, Oh much lov'd fire!
the sacred Nine,
Who thee have honour'd with such gifts
divine;
Who taught thee how to charm the list'n-
ing throng,
With all the sweetness of a firen's song;
Blending such tones as ev'ry breast in-
flame,
And made thee heir to great Arion's
fame.

By blood united, and by kindred arts,
On each Apollo his refulgence darts:
To thee points out the magic pow'r of
sound;
To me, the mazes of poetic ground;
And foster'd thus, by his parental care,
We equal seem Divinity to share.

(d) Even the Lute was to weep, and be
forrowful: for Dowland published about
this time *Lachrymæ*, or *Seven Teares fi-
gured in seaven Passionate Pavins*.

of

of the times thought them worthy of the best Music they could set to them, in four and five parts. Sir William Leighton, Knt. who set many of them himself, was the editor; and in the list of composers we have Bird, Dr. Bull, Orlando Gibbons, Dowland, Robert Jhonson, Forde, Hooper, Kindersley, Nat. Gyles, Coperario, Pilkington, Lupo, Peirson, Jones, Alfonso Ferrabosco, Ward, Weelkes, Wilbye, and Milton (e).

JOHN DOWLAND was born in 1562, and admitted to a Bachelor's degree in Music, at Oxford, in 1588, at the same time as Morley (f). His instrument was the lute; for his performance upon which he was so much celebrated, that Anthony Wood (g), who never could have heard him, scrupled not to say, "He was the rarest musician that his age did behold."

After being at the pains of scoring several of Dowland's compositions, I have been equally disappointed and astonished at his scanty abilities in counterpoint, and the great reputation he acquired with his cotemporaries, which has been courteously continued to him, either by the indolence or ignorance of those who have had occasion to speak of him, and who took it for granted that his title to fame, as a profound musician, was well founded. There are among the *Lamentations*, published by Leighton, mentioned before, several by Dowland, which seem to me inferior in every respect to the rest: for, besides want of melody and design, with the confusion and embarrassment of a *Principiante* in the disposition of the parts, there are frequently unwarrantable, and, to my ear, very offensive combinations in the harmony; such as a sharp third, and flat sixth; an extreme flat fourth and sixth, &c.

I make no doubt but that Dowland was a captivating performer on the lute, to which Shakspeare has borne testimony in his *Passionate Pilgrim*, (No. VI.) where addressing his friend, he says:

(e) *The Teares or Lamentations of a Sorrowful Soule. Composed with musical Ayres and Songs, both for Voices and divers Instruments.* Fol. Lond. 1611.

(f) He is stiled *Doctor* by Tomkins,

Peacham, and Ravenscroft; but A. Wood is silent concerning his ever having obtained that degree.

(g) *Faſti*, 1588.

If Music and sweet Poetry agree,
As they must needs, the sister and the brother,
Then must the love be great 'twixt thee and me,
Because thou lov'st the one, and I the other.

DOWLAND to thee is dear, whose heav'nly touch
Upon the lute doth ravish human sense;
SPENSER to me, whose deep conceit is such,
As passing all conceit needs no defence.

Thou lov'st to hear the sweet melodious sound
That Phœbus' lute, the Queen of Music makes;
And I in deep delight am chiefly drown'd,
When as himself to singing he betakes.

One god is god of both, as poets feign;
One knight loves both, and both in thee remain.

Suppl. to Shakspeare, Vol. I. p. 713.

It has frequently happened that a great performer has been totally devoid of the genius and cultivation necessary for a composer; and, on the contrary, there have been eminent composers whose abilities in performance have been very far from great. Close application to the business of a composer equally enfeebles the hand and the voice, by the mere action of writing, as well as want of practice; and if the art of composition, and a facility of committing to paper musical ideas, clothed in good harmony, be not early acquired, even supposing that genius is not wanting, the case seems hopeless; as I never remember the difficulties of composition thoroughly vanquished, except during youth.

I think I may venture to say from the works of Dowland, which I have had an opportunity of examining, that he had not studied composition regularly at an early period of his life; and was but little used to writing in many parts. In his prefaces, particularly that to his *Pilgrim's Solace*, he complains much of public neglect; but these complaints were never known to operate much in favour of the complainants, any more than those made to a mistress or lover whose affection is diminishing, which seldom has any other effect than to accelerate aversion. As a composer, the public seem to have been right in withdrawing that favour from Dowland, which had been granted on a *bad basis*; but with regard to his performance, we have nothing to say: as at this distance of time

there is no judging what proportion it bore to that of others who were better treated.

I have my doubts likewise concerning the *genius*, at least, of the second FERRABOSCO, who had the Poets and Dilettanti all on his side; but whose works, that have come under my inspection, seem wholly unworthy of a great professor. The elder, Alfonso Ferrabosco, was a native of Italy, and a composer of great eminence, throughout Europe (*b*); his son, who is said to have been born at Greenwich, published *Ayres*, with an accompaniment for the lute, in London, 1609, which contain as little merit of any kind as I have ever seen in productions to which the name of a master of established reputation is prefixed: these he dedicated, with no great humility, to Prince Henry, the eldest son of James I.

Three herald minstrels, ycleped Ben Jonson, T. Campion, and N. Tomkins, proclaimed the high worth and qualities of these *Ayres* in three encomiastic copies of verses, prefixed to the work; but these friendly bards, who praise not with a very sparing hand, seem to have less exalted ideas of the author's merit and importance, than himself; "For," says he to the Prince, "I could now with that solemn industry of many in *Epistles*, enforce all that hath been said in praise of the *Faculty* of Musique, and make that commend the worke; but I desire more, the worke should commend the *Faculty*: and therefore suffer these few *Ayres* to owe their grace rather to your *Hightness* judgment, than any other testimonies. I am not made of much speech; only I know them worthy of my name; and therein, I took paines to make them worthy of yours.

"Your Highness most humble Servant,

"ALFONSO FERRABOSCO."

As these *Ayres* are short and scarce, the musical critic in the following plates shall have it in his power to discover such beauties in them as may have escaped my observation.

(*b*) It is of him that Morley and Peacham speak, and of whom there are compositions in almost all the collections of motets and madrigals printed in Italy during the middle and latter end of the sixteenth

century. Some of his motets appear with those of Cipriani Rore, printed at Venice so early as 1544, and are written with great purity.

From

From a book entitled The Tears or Lamentations of a sorrowful soule,
set forth by Sir William Leighton Knight 1614.

139

JOHN MILTON

Thou God of might hast chastend me & me corrected with thy rod wounded my soule with mi-se-rie

Thou God &c & me corrected wth thy rod wounded my soule with miserie

Thou God &c & me cor-rected with thy rod wounded &c with mi-se-

Thou God &c & me corrected with thy rod wounded &c

wounded my soule with miserie & humbled me to know to know my God.

wounded my soule with miserie wounded &c & humbled me to know my God to know my God.

-rie with mi-se-rie wounded &c & humbled me & humbled me &c God.

wounded my soule with mi-se-rie wounded &c & humbled me to know my God.

Lamentation a 4 by Jo. Dowland Bachelor of Musicke published 1614

An heart thats broken and contrite to God is a sweet sweet sa-cri-fice

An heart thats broken broken & contrite to God is a sweet a sweet sacri-fice

An heart thats broken & contrite to God &c sa-crifice

An heart thats broken & contrite to God is a sweet sweet sa-cri-fice

Repentant sinners him delight far more far more than just men in their fight.

Re-pen-tant sinners him delight farre more far more more than just men in their fight.

Re-pen-tant repentant sinners him delight far more far more &c fight.

Re-pen-tant sinners him delight farre more the just men in their fight.

by the figures
placed over this
base wholly com-
prehend.

Ferrabosco XII *

*The words of this & the two following Ayris, are part of a Poem on the Death of S^t. Phil. Sidney.

2 Part

3 Part

The preceding plates exhibit specimens of the composition of Milton, Dowland, and Ferrabosco; of which, notwithstanding the greater celebrity of the two last musicians, Milton's production is the best, not only in point of ingenuity, but correctness (*i*).

Instrumental Music seems as yet to have made but a small progress towards that perfection at which it has since arrived: indeed, the lute and virginal were the only instruments for which any tolerable Music seems to have been expressly composed. The violin was now hardly known, by the English, in shape or name; and, therefore, that superior power of expressing almost all that a human voice can produce, except the articulation of words, seemed at this time so utterly impossible, that it was not thought a gentleman's instrument, or one that should be admitted into good company. Viols of various sizes, with six strings, and fretted like the guittar, began indeed to be admitted into chamber-concerts: for when the performance was public, these instruments were too feeble for the obtuse organs of our Gothic ancestors; and the low state of our regal Music in the time of Henry VIII. 1530, may be gathered from the accounts given in Hall's and Hollingshead's Chronicles, of a Masque at Cardinal Wolsey's palace, Whitehall, where the King was entertained with "a Concert of Drums and Fifes." But this was soft Music compared with that of his heroic daughter Elizabeth, who, according to Henxner (*k*), used to be regaled during dinner "with twelve trumpets, and two kettle-drums; which together with fifes, cornets, and side drums, made the hall ring for half an hour together."

The Lute, of which hardly the sound or shape is known at present, was, during the two last centuries, the favourite chamber-instrument of every nation in Europe (*l*). Sir Thomas Wyatt, the elder, has left us a *Sonnet to his Lute*, written very early in the sixteenth century; and Congreve, at the end of the last, has celebrated the performance of Mrs. Arabella Hunt on that instrument.

(*i*) The places in Dowland's second composition marked with a †, will not be found very grateful to nice ears.

(*k*) *Itinerarium*, Edit. 1757. p. 53.

Strawberry-hill.

(*l*) Vincenzo Galilei says, that the Lutes made in England, in his time, were the best. *Dial. della Mus.*

Indeed choral compositions, madrigals, and songs in that style, always of many parts, being the only *Vocal Music* that was in favour with masters and their most powerful patrons, precluded much refinement in the performance: as fugues, canons, and full choruses, of which they chiefly consisted, are founded upon *democratic* principles, which admit of no sovereignty; and whatever good they contain is equally distributed to all ranks in the musical state. The art of *Singing*, therefore, in these times, further than was necessary to keep a performer in tune and time, must have been unknown: the possessor of the most exquisite voice had no more frequent opportunities allowed of displaying it, than the most disagreeable; solo songs, anthems, and cantatas, being productions of later times. The penalty for the crime of playing a solo at the Concert of Ancient Music, is five guineas; but at this time, if instead of that sum being forfeited, five hundred had been offered to the individual who could perform such a feat, fewer candidates would have entered the lists than if the like premium had been offered for flying from Salisbury steeple over Old Sarum, without a balloon.

It is therefore upon the *Church Music, Madrigals, and Songs in Parts*, of our countrymen, during the reign of Queen Elizabeth, that we must rest their reputation; and these, in point of harmony and contrivance, the chief excellencies of such compositions, appear in nothing inferior to those of the best cotemporary productions of the continent. Taste, rhythm, accent, and grace, must not be sought for in this kind of Music; indeed we might as well censure the ancient Greeks for not writing in English, as the composers of the sixteenth century for their deficiency in these particulars, which having then no existence, even in idea, could not be wanted or expected; and it is necessarily the business of artists to cultivate and refine what is in the greatest esteem among the best judges of their own nation and times. And these, at this period, unanimously thought every species of musical composition below criticism, except canons and fugues. Indeed what is generally understood by taste in Music, must ever be an abomination in the church; for as it consists in new refinements or arrangements of

I

notes,

notes, it would be construed into innovation, however meritorious, till consecrated by age: thus the favourite points and passages in the madrigals of the sixteenth century, were in the seventeenth received as orthodox in the church; as those of the opera songs and cantatas of the seventeenth century are used by the gravest and most pious ecclesiastical composers of the eighteenth.

It does not, however, appear just and fair to slight old compositions, though a totally different style at present prevails. *History* does not imply *constant perfection*: the vices, follies, and even caprice of Princes, as well as of mankind in general, constitute as necessary a part of their annals as their virtues. The fugues and canons of the sixteenth century, like the Gothic buildings in which they were sung, have a gravity and grandeur peculiarly suited to the purpose of their construction; and when either of them shall, by time or accident, be destroyed, it is very unlikely that they should ever be replaced by others in a style equally reverential and stupendous. They should therefore be preserved as venerable relics of the musical labours and erudition of our forefathers, before the lighter strains of Secular Music had tintured melody with its capricious and motley flights.

Indeed, while there was little melody, less rhythm, and a timid modulation, Music could not support itself without fugue: as it is necessary that the French Dramas, for want of blank verse, or nervous prose, should be written in rhyme. And as simple subjects are best for fugue, and the composers of this period spent their whole lives in their contexture, it seems natural to suppose that they should be superior to those of the present age, when musicians have so much more to do. A fugue is now seldom produced but upon some particular occasion, or in an ostentatious fit of pedantry, as a specimen of that science which professors at other times affect to despise.

The *modulation* of the sixteenth century, though it has a grave and uncommon effect in the Church-Music of that time, is not accommodated to musical students of the present times; for being confined to the ecclesiastical modes, it precludes the use of the most agreeable

agreeable keys in Music. Zarlino (*m*), who, like Glareanus, allowed of twelve modes, speaks of himself and a few others having composed in the eleventh, or key of C natural, which was not one of the ancient original eight ecclesiastical modes, to which they were led by the vulgar musicians of the streets and villages, who generally accompanied rustic dances with tunes in this key, which was then called *Il modo lascivo*, or the *wanton* key. Here we have an instance of the mischief of system: for what was prohibited by the laws of ecclesiastical modulation to men of science, was suggested by nature to the hands and ears of ignorance and rusticity, who dared to please the sense, without first obtaining the permission of intellect.

Bird, and other old masters, have been censured by the Reverend Mr. Mason, in his excellent *Essay on Church-Music* (*n*), for inattention to prosody, accent, and quantity, in setting English words; and indeed, besides the negligence in that particular, common to all the composers of their time, the *accentuation* of our language has received such changes since the time of Tallis, Bird, and our other best church composers, that it seems absolutely necessary for the words to be newly adjusted to the melodies by some judicious person, equally tender of the harmony of these admirable compositions, as of the prosody of our language; constantly taking care to place the accent of each word upon the accented part of each bar in the Music (*o*).

With

(*m*) P. 333.

(*n*) *A copious Collection of those Portions of the Psalms of David, Bible, and Liturgy, which have been set to Music, and sung as ANTHEMS in the Cathedral and Collegiate Churches of England.—Published for the Use of the Church at York; to which is prefixed a Critical and Historical Essay on Cathedral Music.* York, 1782.

(*o*) It is much to be lamented that this task was not performed by the late Dr. Boyce, when he revised and prepared these Services for publication. In the *Te Deum* of both Tallis and Bird, printed in his first and third volumes, the accent in all the parts is given to the second syllable of the

words *holy*, *glory*, *glorious*, and upon the first in *apostles*. In Tallis's Service, Vol. I. p. 5. long syllables are made short, and short, long: *The goodly fellowship of the prophets praise thee. The noble army—The holy church throughout all, &c. The father. P. 7. Servants. 8. We worship; ever. 9. upon. Mercy lighten, &c.*

In Bird's Service, p. 2. we have *to thee. 4. alſo of glory. 5. To deliver; abhor; the kingdom; the glory; thy precious. 7. People; we worship; ever; world. 8. upon. 9. Mercy; lighten our trust.*

In Tallis's *Benedictus*, p. 11. *Perform the mercy promised. Covenant* is made a disyllable, and has only two notes allowed to it

With respect to the most unexceptionable manner of singing in the church, it is difficult to suggest any one that will obviate all objections. In our cathedral *chanting*, and the *canto fermo* of the Romish church, some of the words are uttered with too much rapidity, while others at the *mediatio*, or half-close, and termination, are protracted to an unreasonable length. In our *Parochial Psalmody*, as there is no distinction of syllables, but all are made as long as the lungs of the clerk and congregation will allow; so with respect to *Services*, *Full Anthems*, and the *Romish Mass in Music*, besides the artificial contexture of the parts, divisions upon particular words, and repetitions of whole sentences, the nature of canon and fugue is such, that the singers are constantly pronouncing different words at the same time, with the clamour of ill-bred disputants, who are all talking at once.

Salvator Rosa, who was as severe with his pen, as bold and original with his pencil, in his Satires has not spared the pedantry of false refinements, and abuse of Church Music. However, almost all his coarse censures, except those levelled at the Castrati, may be found in Erasmus (*p*). The bitterness of invective with which these two writers have loaded Ecclesiastical Music and Musicians will have the more weight, when it is remembered, that Erasmus had been himself a singing-boy in the cathedral of Utrecht; and that Salvator Rosa, besides being an excellent painter and poet, was a good musician.

Salvator, in his first Satire, after treating Secular Music and Musicians with extreme uncharitableness and severity, criminales those of the church with more than puritanical fury.

it. P. 12. *perform*; *being delivered*. In the beginning of the *Sanctus*, by Tallis, p. 33, the words are likewise very ill accented.

Where no fugue or imitation is concerned, all the voices should pronounce the same word, in the same accent, at the same time; which would greatly facilitate to the congregation the intelligence of what is sung; this is often unnecessarily prevented

by ligatures, and divisions in one part more than another.

A few slight arrangements of this kind in the words, would render these Services, as well as Morley's Burial Service, and others in Boyce's collection, as unexceptionable with regard to *accentuation* of the words, as texture of the parts in the harmony.

(*p*) *Commentary on the first of Corinthians*, xiv. 19.

Who

Who blushes not to hear a hireling band,
At times appointed to subdue the heart,
Profane the temple with *Sol-fa* in hand,
When tears repentant from each eye should start?

What scandal 'tis within the sacred wall,
To hear them grunt the vespers, bark the mass,
The *Gloria*, *Credo*, *Pater-noster* bawl,
With the vile fury of a braying ass!

And still more scandalous, in such a place,
We see infatuate Christians list'ning round,
Instead of supplicating God for grace,
To *Tenor*, *Base*, and subtilties of sound.

And while such trivial talents are display'd
In howls and squeaks, which wound the pious ear,
No sacred word is with the sound convey'd,
To purify the soul, or heart to cheer.

Like drunken Bacchanals they shameless roar,
'Till with their noise and jargon all are weary;
And in the Sanctuary they God adore,
Sing to a vile *Ciaccone* the *Miserere* (q).

A certain degree of simplicity is necessary, in Choral Music, to render it suitable to the purposes of devotion, which seem to demand a clear, distinct, and articulate pronunciation of the words, and that the duration of the notes, whether applied to verse or prose, should be proportioned to the length of the syllables: indeed, I see no other method of accomplishing this end in choruses, than by *simple counterpoint* of note against note, in all the parts, at least the first time the words are uttered; afterwards, as the congregation will be already in possession of their sense and import, nothing will be lost, on the side of instruction, if they should be repeated in canon, fugue, or other musical contrivance (r).

(q) *Vergognosa follia d'un petto insano!*
Nel tempo eletto à prepararsi il core
Si stà nel tempio con le Solfe in mano.—
Che scandalo è il sentir ne sacri rostri
Grunnir il vespro, ed abbajar la messa,
Ragghiar la Gloria, il Credo, e i Pater-
nostri.—
Quando stillar dovrian gl'occhi in humore,
L'impazzito Christian gl'orecchi intenti
Tiene all'arte d'un Basso, à d'un Tenore.—
Apporta d'urli, e di mugiti impressa
L'aria à gl'orecchi altrui tedj, e molestie,
Ch'udir non puossi una sol voce espressa.

Sicche pien di baccano, e d'immodestie
Il sacrario di Dio sembra al vedere
Un arcà di Noè frà tante bestie.
E si sente per tutto à più potere,
Ond'è, che ogn'un si scandalizza, e tedia,
Cantar su la Ciaccona il Miserere.
(r) The solemn Music of the church, without words, Dryden emphatically calls *Inarticulate Poesy*. *Pref. to Tyrannick Love; or, the Royal Martyr*. And such should be the *Voluntaries* of our organists, at least in the middle of the service.

When

When the verse of a Psalm or Hymn is set in fugue, if the part that leads off the subject were to pronounce the whole verse or sentence, to complete the sense, before the answer is introduced, it would perhaps obviate the objection that is made to this ingenious species of composition, on account of the confusion occasioned by the several parts singing different words at the same time.

I have dwelt the longer on the state of Music in England during the long and fortunate reign of Queen Elizabeth, for the honour of our country; as I fear no other period will be found in which we were so much on a level with the rest of Europe, in musical genius and learning. And however uncouth the compositions of these times may appear to those who think all Music barbarous but that of the present day; it seems as if those productions, which, at any period of an art, universally afforded delight to the best judges of their merit, were well entitled to examination and respect, however the revolutions of taste and fashion may have diminished their favour.

C H A P. II.

Of the State of Music in Italy during the Sixteenth Century: including an Account of Theorists, with the Progress of Practical Music in the Church, as well as of Madrigals, Ricercari, or Fantafias, and Secular Songs, of that Period.

MELODY, itself the child of Fancy, was still held in Gothic chains; and though there was no rhythm, or symmetry of measure, the subject of every movement was symmetric and invariable. To check Imagination's wild vagaries, and restrain her wanton flights in the solemnity of supplication, humility of contrition, funereal sorrow, or even the grateful song of gladness and thanksgiving, when addressed to the Divinity, during the celebration of sacred rites in the temple, is not only required by propriety, but duty. Yet, as the confining Music merely to religious purposes borders on fanaticism, so the treating secular and light subjects with ecclesiastical gravity; making a fugue of every movement, and regarding grace, elegance, and fertility of invention, as criminal, or, at best, as frivolous, are equally proofs of want of taste, and want of candour. But these points will be best discussed when we come to treat of Lyric and Dramatic Compositions, and trace the progress which Instrumental Music has made during the present century.

What kind of Music the Italians cultivated before the general use of counterpoint was established, I know not; but we find in the Lives of their first Painters, that many of them had been brought up to Music, as a profession. Leonardo da Vinci was a great performer on several instruments, and invented a new species of lyre, in the shape of a horse's skull (a). Italy had likewise at this time singers with great talents for execution and expression, according to Castiglione, who, in his *Cortegiano*, speaking of the variety

(a) *Da Teschio di Cavallo.*—Vasari, *Vite di Pitt.*

and

and power of contrast in the arts, observes, that “ Instances of
 “ dissimilar things producing similar effects that are equally pleasing
 “ and meritorious may be given in them all ; particularly Music,
 “ in which the movement is sometimes grave and majestic, and
 “ sometimes gay and animated, yet equally delightful to the hearer.
 “ Thus, in singing, what can be more different than the perform-
 “ ance of BIDON and MARCHETTO CARA ? The one artificial,
 “ rapid, nervous, vehement, and impassioned, elevates and inflames
 “ the soul of every hearer ; while the other, more gentle, pathe-
 “ tic, and insinuating, soothes, calms, and affects by a sorrowful
 “ and tender sweetness, which penetrates the heart, and affords it
 “ the most exquisite pleasure of a different kind.” This descrip-
 tion the late Mr. Galliard (*b*) has thought applicable to the different
 powers of the two great female singers, Faustina and Cuzzoni, the
 superiority of whose abilities was so disputable when they performed
 on the same stage in England, 1727, that the patrons and friends
 of the one became inveterate enemies to those of the other.

Great natural powers will sometimes astonish and charm without
 much assistance from art ; and so late as the year 1547, Pietro
 Aaron (*c*) gives a list of such extraordinary performers as were able
 to *sing by book, cantori a libro* ; by which we may suppose that the
 art was new and uncommon. And according to Tartini (*d*),
 “ The old Italian songs being only made for a single voice, were
 “ simple in the highest degree ; partaking of the nature of *recita-*
 “ *tive*, but *largo* :” (as the gondoliers at Venice still sing the stanzas
 of Tasso). “ None were confined to regular bars ; and the key
 “ was determined by the kind and compass of voice that was to
 “ sing them.”

However, during the sixteenth century, when the works of Pa-
 lestrina appeared, the Italians may with justice be said to have
 given instructions to the rest of Europe, in counterpoint, as, ever
 since operas were established, they have done in singing. But before
 we proceed to give specimens of the composition of this admirable
 composer and his contemporaries, it seems necessary to speak of the

(*b*) Transl. of Tosi, p. 170.

(*c*) *Lucidario in Musica*, fol. 31.

(*d*) *Trattato di Musica*, p. 17.

chief Theorists of Italy, who established the principles upon which their productions were founded; and as not only the Italian School of Music, but that of every other country, seems much indebted to the labours of Franchinus Gaffurius, and the many useful books he published, I shall place him at the head of their Musical Classics.

FRANCHINUS GAFURIUS, or GAFFORIO, of Lodi (e), born 1451, was the son of Betino, a soldier in the service of Gonzago, Duke of Mantua, and Catherine Fixaraga, of the same place. He was first intended for Priest's orders, but after studying Music for two years under Fryar John Goodenach, a Carmelite, he manifested so much genius for that science, that it was thought expedient to make it his profession. After learning the rudiments of Music at Lodi, he went to Mantua, where he was patronized by the Marquis Lodovico Gonzago; and where during two years he pursued his studies with unwearied assiduity night and day, and acquired great reputation both in the speculative and practical part of his profession (f). From this city he went to Verona, where he read public Lectures on Music for two years more, and published several works; after which he removed to Genoa, whither he was invited by the Doge Prospero: there he entered into Priest's orders. From Genoa he was invited to Milan by the Duke and Duchess Galeazzo, but they being soon after expelled that city, he returned to Naples, where Philip of Bologna, Professor Royal, received him as his colleague; and he became so eminent in the theory of Music, that he was thought superior to John Tinctor, William Guarnieri, Bernard Yeart, and many celebrated and learned musicians, with whom he now conversed and disputed. He there composed and published his profound *Treatise on the Theory of Harmony*, 1480; which was afterwards corrected, enlarged, and republished at Milan, 1492; but the plague raging in Naples, and

(e) Walther mistakenly makes him a native of Lyons, in France. *Laudensis*.

(f) His biographers inform us not when or where Franchinus met with Bonadies, of whom he so frequently makes

honourable mention in his works, constantly calling him *Præceptor meus*. P. Martini has given a fragment, from a *Kyrie Eleison*, composed by Bonadies in 1473, when Gafforio was twenty-two years old.

that

that kingdom being likewise much incommoded by a war with the Turks, he retreated to Otranto, in Apulia; whence, after a short residence, he returned to Lodi, where he was protected and favoured by Pallavicino, the Bishop, and opened a public school, in which, during three years, he formed many excellent scholars. He was offered great encouragement at Bergamo, if he would settle there; but the war being over, and the Duke of Milan, his old patron, restored, he preferred the residence of that city to any other. It was here that he composed and polished most of his works; that he was caressed by the first persons of his time for rank and learning; and that he read Lectures by public authority to crowded audiences, for which he had a faculty granted him by the Archbishop and chief magistrates of the city in 1483, which exalted him far above all his cotemporary brethren: and how much he improved the science by his instructions, his lectures, and his writings, was testified by the approbation of the whole city; to which may be added the many disciples he formed, and the almost infinite number of volumes he wrote, among which several will live as long as Music and the Latin tongue are understood. He likewise first collected, revised, commented, and translated into Latin the old Greek writers on Music: Aristides Quintilianus, Manuel Briennius, Bacchius sen. and Ptolemy's Harmonics. The order of the works he published is as follows: *Theoricum Opus Harmonicæ Disciplinæ*, mentioned above, Neapolis, 1480. Milan, 1492. This was the first book on the subject of Music that issued from the press after the invention of Printing, if we except the *Definitiones Term. Musicæ*, of John Tinctor (g). *Præctica Musicæ utriusque Cantus*. Milan, 1496. Brescia, 1497, 1502. And Venice, 1512. *Angelicum ac Divinum Opus Musicæ Materna Lingua Scrip.* Milan, 1508 (b). *De Harmonica Musicor. Instrumentorum*. Milan, 1518. This work, we are told by Pantaleone Melegulo, of Lodi, his countryman, from whom some account of the author appeared in the first edition, was written when Gafforio was fifty years of age, that is to say, in the year 1501; and though the subject is dark and diffi-

(g) See Vol. II. p. 458.

(b) The title only of this book is Latin, the rest is in Italian.

cult, it was absolutely necessary for understanding the ancient authors. If, says Pantaleone, a life spent in labour for the advancement of science, and in a series of laudable actions, can entitle a human being to fame in this world, and felicity in the next, the claim of Gafforio to both seems indisputable.

The doctrines of this excellent theorist, who died 1520, have been so frequently cited in the course of the preceding volume, that, after the ample list of his writings just given, a table of their contents, or further extracts from them, seem unnecessary.

PIETRO AARON, a Florentine, of the order of Jerusalem, and canon of Rimini, was a voluminous writer on Music. He first appears as an author in 1516, when a small Latin tract in three books, *De Institutione Harmonica*, which he wrote originally in Italian, was translated into Latin, and published at Bologna, by his friend, Joh. Ant. Flaminus, of Imola.

His second publication is entitled *Toscanello della Musica*. This treatise, the most considerable of all his writings, was first printed at Venice, 1523; then in 1529; and lastly, with additions, in 1539. In the Dedication to this work the author tells us, that he had been admitted into the Papal chapel, at Rome, during the Pontificate of Leo X. in speaking of whom, he says, "Though this
" Pontiff had acquired a consummate knowledge in most arts and
" sciences, he seemed to love, encourage, and exalt Music more
" than any other; which stimulated many to exert themselves
" with uncommon ardor in its cultivation. And among those who
" aspired at the great premiums that were held forth to talents, I
" became," says he, "a candidate myself; for being born to a
" slender fortune, which I wished to improve by some reputable
" profession, I chose Music; at which I laboured with unremitting
" diligence, till the irreparable loss I sustained, by the death of my
" munificent patron, Leo."

Those who have read Boethius and Franchinus, will not find many new discoveries or precepts in this treatise of Pietro Aaron. However, as the writings of his celebrated predecessors were chiefly in Latin, his works became perhaps the more useful and acceptable

able to the secular musicians of Italy, from the language in which they were published. *Il Toscanello* is divided into two books: the first contains a common-place panegyric on Music, and an enumeration of its inventors, with definitions and explanations of musical terms and characters. In the second book, after the usual parade of science concerning the genera of the ancients, he proceeds to counterpoint, for which he gives a *decalogue*, or ten precepts (*i*). After this, we have a short explanation of arithmetical, geometrical, and harmonical proportion, with directions for dividing the monochord, according to the principles of Guido.

His third work, published at Venice, 1525, was likewise written in Italian; for which, as it had been so long the custom for Latin to be the vehicle of science, he makes an apology. This *Treatise* is upon the tones, or keys, of *Canto-figurato*, which he regulates entirely by those of *Canto-fermo* (*k*).

Pietro Aaron upon all occasions manifestly exalts the character of BARTHOLOMEO RAMIS, a Spaniard, at the expence of Franchinus. Ramis was the first modern who sustained the necessity of a temperament (*l*); he was answered by *Nicholas Burtius*, 1487 (*m*), who imagined the honour of Guido to be injured by the Spaniard, as Guido used the Pythagorean proportions, and had never thought of a *temperament*. Burtius again was handled very roughly by SPATARO, the disciple of Ramis (*n*); and the venerable theorist, Franchinus, finding himself very rudely treated in this dispute, by the favourers of temperament, in 1522, when he was upwards of seventy years of age, took up the defence of Pythagoras, as Fontenelle (*o*), at near a hundred, did of Des Cartes. After this, the war became general, and continued to rage with great violence for more

(*i*) Franchinus and the more ancient writers gave no more than eight rules of counterpoint.

than a century, between the friends of tempered scales, and the adherents to ancient proportions, and equal harmony.

The fourth tract of Pietro Aaron is called *Lucidario in Musica di alcune Oppenioni Antiche e Moderne—Composto dall' eccellente, e consumato Musico PIETRO AARON, &c.* Ven. 1545 (p). In this work we have discussions of many doubts, contradictions, questions, and difficulties, never solved before. Here the timidity of early contrapuntists appears, in the use of accidental semitones, which the pure diatonic scales of *Canto-fermo* did not allow.

The following passages, which in 1545 were thought *licentious*, have since become the common materials and ground-work of composition.

The Use of the False Fifth, prohibited by Franchinus, L. III. cap. 3. is allowed by P. Aaron, *Lucidario*, Lib. II.

Two 5ths, one false, one true,

(p) The splendid and magnificent titles given to authors in books, published by themselves, are no otherwise reconcileable to modern ideas of literary humility, than by supposing them to proceed from the courtesy of the printer; as the commendatory verses which succeeded these hyperbolic title-pages, and continued in fashion as late as the publication of Pope's

works, did from the partiality of friends. One of the tracts of Franchinus, and that which least deserved it, is styled *Angelicum ac Divinum Opus Musicae*; and the *Lucidario in Musica*, as the author himself seems to inform us, was composed by the excellent and consummate musician, PIETRO AARON, &c. &c.

For

For the extent of the several modes, he very frequently confirms his opinion by the authority of Marchetto da Padua, whom he calls *Il nostro eccellentissimo Marchetto Padovano* (q). It is easy to discover through verbal respect for the person of Franchinus, that this author wishes on all occasions to depreciate his doctrines.

Another small work, entitled *Compendiolo di molti dubbj Segreti et Sentenze intorno il Canto-fermo e figurato*, by this author, has no date, and seems but a kind of supplement to his *Lucidario*.

The next writer upon Music to Pietro Aaron, in Italy, is LODOVICO FOGLIANO, who published, in 1529, a Latin tract upon the *Theory of Sound* (r). This work is divided into three sections: in the first, he treats of musical proportions; in the second, of consonances; and in the third, of the division of the monochord. In the second section, the foundation seems to have been laid for another branch of the musical controversy already mentioned, which was afterwards agitated with great warmth; this author contending, contrary to the doctrines of Boethius, from whom two-thirds of his book are taken, for the distinction of *greater* and *less tone*, in the diatonic tetrachord (s). Of the nature of this dispute some idea may be derived from the account given of the ancient musical sects in Greece, in the first volume of this work (t), where the discovery of a temperament is given to Didymus.

In 1531, GIOV. SPATARO, already mentioned among the enemies of Franchinus, published at Venice a work, entitled *Tractato di Musica*, in which he renews his attack with redoubled scurrility. Quarrels of this kind, which are never interesting to any but the combatants and their partizans, are rendered still more offensive to others, by time; as the truths for which they would be thought to contend, are either too well known, or too much forgotten, to merit the attention of posterity.

In 1538, GIOV. MARIA DA TERENTIO LANFRANCO published his *Scintille di Musia*, a work which is frequently cited with great praise by subsequent writers; as is the following:

(q) P. Aaron is obliged to this author for the title of his book; as Marchettus calls a work, written in 1274, *LUCIDARIUM in Arte Musice planæ*. See Vol. II. p. 161.

(r) *Musica Theorica*. Fol.

(t) P. 452.

Recanetum di Musica aurea, published at Rome, the same year, by STEFFANO VANNEO. It was written originally in Italian, and translated into Latin by Vincenzio Rossetto, of Verona. And this is all that I am able to say of these two books, as they are now become so scarce, that I have never been so fortunate as to procure copies of them.

Dialoghe della Musica, by ANTONFRANCISCO DONI, published at Venice, 1544, is likewise among the *Libri rari*. I have never seen it, except in the library of Padre Martini, where I transcribed a considerable part of it. The author, a whimsical and excentric character, tinctured with buffoonery, was not only a practical musician and composer by profession, but connected and in correspondence with the principal writers and artists of his time. His *Libreria* must have been an useful publication when it first appeared; as it not only contains a catalogue and character of all the Italian books then in print, but of all the MSS. that he had seen, with a list of the academies then subsisting, their institution, mottos, and employment; but what rendered this little work particularly useful to my enquiries, is the catalogue of all the Music that had been published at Venice since the invention of Printing; to this list I shall have frequent occasion to refer hereafter. The author has published a collection of his letters, and the answers to them; and a wild satirical rhapsody, which he calls *La Zucca*, or the Pumpkin. In all his writings, of which he gives a list of more than twenty, the author aspires at singularity, and the reputation of a comical fellow; in the first he generally succeeds, and if he fail in the second, "his stars are more in fault than he (u)."

At the beginning of his *Dialogue on Music*, the author gives a list of composers then living at Venice, amounting to seventeen; of whom seven are Netherlanders, the rest chiefly Italian. In the

(u) Apostolo Zeno, in his notes on the *Bibl della Elog. Ital.* of Fontanini, seems to give a very just character of this whimsical writer, when he says, *Il Doni solito sempre tener dubbio il lettore ne' suoi fantastici scritti tra la verità, e la falsità, talchè non si scuopre, quando da senno, e quando da bur-*

la egli parli. To. II. p. 180. edit. di Venezia, 1753. "It is so much the practice of Doni, in all his fantastical writings, to blend truth with falsehood, that the reader is unable to discover when he is ludicrous, or when serious."

course of the dialogue, compositions by most of them are performed. In the first conversation the interlocutors are Michele, Hoste, Bargo, and Grullone, all performers, who sing madrigals and songs by Claudio Veggio and Vincenzo Ruffo. In the second conversation, instruments are joined to the voices: Anton. da Lucca first playing a voluntary on the lute, *Fà cose divine*; then Buzzino *il violone*; Lod. Bosso, S. G. Battista, Pre Michele, Pre Bartolomeo, and Doni himself, play on viols; these all perform in pieces of Riccio da Padua, Girolamo Parabosco, Berchem, Archadelt (x), &c. Here Doni speaks with triumph and exultation of the superior state of Music in his time, compared with that of any former period: for, says he, “there are musicians now, who, if Josquin
“were to return to this world, would make him cross himself. In
“former times people used to dance with their hands in their pockets; and if one could give another a fall, he was thought a
“wit, and a dexterous fellow. *Yfach* (Henry Isaac, detto *Arrigo Tedesco*), then set the songs, and was thought a *Master*; at present he would hardly be a *Scholar* (y).”

(x) Parabosco was organist of St. Marc's church, at Venice, and, according to Crescimbeni, *Stor. del. Volg. Poes.* a most admirable performer. “Whoever,” says Ant. Fran. Doni, *Libreria Tratt.* imo. “is endowed by Heaven with the power
“of receiving and communicating pleasure,
“should imitate Parabosco; who, not
“content with that musical excellence,
“with which he has given such delight,
“both in public and private, and acquired
“such fame, has afforded equal pleasure
“by his literary and poetical talents, in
“the publication of works, that are as
“much esteemed for their wit and learning,
“as originality.” He then gives a list of his Tragedies, Comedies, Miscellaneous Poems, and Letters; adding, that “he hoped his *Novels* would soon appear in print, which, for their invention
“and style, he thought the most admirable productions of the kind that he had
“ever read.” They were afterwards published under the title of *Gli Disporti*, 1586, and I purchased them at the sale of the

late Mr. Beauclerc's books; but find, on perusal, that Doni spoke of them as he did, perhaps, of his musical abilities, with the partiality of a friend. Several of the *motets* and madrigals of Parabosco are inserted in the collections that were published about the middle of the sixteenth century, some of which I took the trouble to score, but found in them no subject, and but little design, or contrivance. And if his literary abilities did not impose on the writers who speak of his musical productions, his character as a composer must have been established on works superior to these, which are mere *remplissage*. The compositions of the two Netherlanders, Jachet Berchem, and Archadelt, of which we shall give specimens hereafter, are infinitely superior to those of Parabosco.

(y) “Hannibal,” says Capt. Bluff, “was a very pretty fellow in those days,
“it must be granted. — But alas, Sir!
“were he alive now, he would be nothing,
“nothing in the earth.”

Fior Angelico di Musica, published at Venice, 1547, by P. ANGELO DA PICITONO, an ecclesiastic, is a work which, however difficult to find at present, is, from its dulness and pedantry, still more difficult to read.

Two dialogues on Music, by LUIGI DENTICE, a Neapolitan gentleman, were published at Rome in 1553. Of these, though the subject turns chiefly upon the musical proportions, and modes of the ancients, in attempting to explain which, Boethius seems to have been the author's principal guide; yet, in the second dialogue, we have an account of what was then a *modern* concert, from which an idea may be formed of the state of practical Music at Naples, when this book was written. One of the interlocutors, speaking with rapture of a performance which he had heard at the palace of Donna Giovanna d'Arragona (z), tells us, that the principal musicians who played on instruments, and were of the first class, were Giovan Leonarda de l'Harpa Napolitano, Perino da Firenze, Battista Siciliano, and Giaches da Ferrara; and that the singers were Giulio Cesare Brancazzo, Francisco Bisballe, Conte de Briatico, Scipione di Palla, and a *Soprano*, whose name, as his performance was censured, the author has concealed; but of the others, he says, they were most perfect musicians, and sung in a wonderful manner (a). It appears by this dialogue, that the vocal performers were not accompanied by a band, but that each sung to his own instrument. *Pochi Musicisti si travano che cantano sopra gli Stamenti che m'abbian finito di contentare, perchè tutti errano in qualche cosa, o nella intonatione, o nella pronunziatione, o nel suonare, o nel fare i Passaggi, o vero nel rimettere & rinforzare la voce quando bisogna; le quali Cose, parte per arte & parte per natura s'acquistano.* "There are few musicians," says the author, "who sing to their instruments, that have entirely satisfied me: as they have almost all some defect of intonation, utterance, accompaniment, execution of divisions, or manner of diminishing and swelling the voice occasionally; in which particulars both art and nature must conspire to render a

(z) The Emperor Charles V. of the House of Arragon, was at this time in pos-

session of the kingdom of Naples.

(a) *Miracolosamente.*

" performer

“ performer perfect.” The interlocutors then celebrate the talents of two female singers; Donna Maria di Cardona Marchese della Padula, and Signora Fagiola, as being possessed of all the requisites of vocal perfection.

It may be concluded from this conversation, that the *Soprano* among the male singers was an *Evirato*; that much art and refinement were expected in vocal performers, besides singing in time and tune; and that, by the titles of Count and Marchioness given to some of the personages whose talents are celebrated, whether they are regarded as professors or Dilettanti, it appears that the successful cultivation of Music in the city of Naples was at this time in great estimation.

During the sixteenth century, and a great part of the next, many of the most eminent musical theorists of Italy employed their time in subtle divisions of the scale, and visionary pursuits after the ancient Greek genera; nor was this rage wholly confined to theorists, but extended itself to practical musicians, ambitious of astonishing the world by their deep science and superior penetration, though they might have employed their time more profitably to themselves, and the art they professed, in exploring the latent resources of harmonic combinations and effects in composition, or in refining the tone, heightening the expression, and extending the powers of execution, upon some particular instrument. These vain enquiries certainly impeded the progress of modern Music; for hardly a single tract or treatise was presented to the public, that was not crowded with circles, segments of circles, diagrams, divisions, subdivisions, commas, modes, genera, species, and technical terms drawn from Greek writers, and the now unintelligible and useless jargon of Boethius.

In 1555, NICOLÒ VICENTINO published at Rome a work, with the following title: *L'Antica Musica ridotta alla moderna Prattica*; or, “ Ancient Music reduced to modern Practice,” with precepts and examples for the three genera and their species; to which is added, an account of a new instrument for the most perfect performance of Music, together with many musical secrets.

Vicentino

Vincentino having the title of *Don* prefixed to his name, seems to have been an ecclesiastic, of the Benedictine order. He was a practical musician, and appears to have known his business; in his treatise he has explained the difficulties in the Music of his time, with such clearness, as would have been useful to the student, and honourable to himself, if he had not split upon enharmonic rocks, and chromatic quick-sands. He gives a circumstantial account of a dispute between him and another musician at Rome, Vincentio Lufitano, who sustained that modern Music was entirely diatonic; while Vincentino was of opinion, that the present Music was a mixture of all the three ancient genera, diatonic, chromatic, and enharmonic. This dispute having produced a wager of two gold crowns, the subject was discussed in the Pope's chapel, before judges appointed by the disputants, and determined against Vincentino; whether justly or unjustly, depends upon the precise sense assigned to the term *Chromatic* by the several disputants.

What use was made of the enharmonic genus in the Music of the sixteenth century, I know not; but whenever other sounds are used than those of the scale, strictly diatonic, by introducing F, C, or G sharp, or any flat, except that of B, which the Greeks themselves allowed in the *Synemmenon Tetrachord*, and the most scrupulous writers upon *Canto-fermo*, in the modes of the church, the diatonic is mixed with the chromatic; and to this licence the first contrapuntists were reduced, at a cadence in D and A minor, as well as G major.

We are now arrived at a period when it becomes necessary to speak of Zarlino, the most general, voluminous, and celebrated theorist of the sixteenth century. GIOSEFFO ZARLINO *da Cbioggia*, Maestro di Capella of St. Mark's church, at Venice, was born in 1540, and author of the following musical treatises, which, though separately printed, and at different periods, are generally bound up together in one thick folio volume. *Institutioni Harmoniche*, Venice, 1558, 1562, 1573, and 1589. *Dimostrationi Harmon.* Ven. 1571, and 1589. *Sopplimenti Musicali*, Ven. 1588. We discover by these dates, that Zarlino first appeared as an author at the age of eighteen; and from that period till he had arrived at
forty-

forty-nine, he was continually revising and augmenting his works. The musical science of Zarlino, who died 1599, may be traced in a right line from the Netherlands : as his master Willaert, the founder of the Venetian school, was a disciple of John Mouton, the scholar of the great Josquin.

A commentary upon the voluminous writings of this author would occupy too large a portion of my work ; and to refer the curious reader to the analysis of his several treatises, by Artusi, would be doing him little service, as the writings of Artusi will be difficult to find. There are few musical authors whom I have more frequently consulted than Zarlino, having been encouraged by his great reputation, and the extent of his plan, to hope for satisfaction from his writings concerning many difficulties in the Music of the early contrapuntists ; but I must own, that I have been more frequently discouraged from the pursuit by his prolixity, than enlightened by his science : the most trivial information is involved in such a crowd of words, and the suspense it occasions is so great, that patience and curiosity must be invincible indeed, to support a musical enquirer through a regular perusal of all his works (b).

However, as there is perhaps more pedantry discovered by writers upon Music in general than on any other art, from their ambition of being thought profoundly skilled in the useless jargon of ancient Greek theorists ; if we make allowances for Zarlino's infirmity in that particular, many useful precepts, and much curious information concerning the Music of the sixteenth century, may be collected from his works.

He begins his Institutes with a panegyric upon Music, in the usual strain ; then we have its division into mundane and humane,

(b) It has often astonished me to find the Italians, who are in general possessed of such animation and impetuosity, so prolix and verbose in their prose writings ; and that a people of such exquisite taste in the fine arts, should have so little in literature. It seems as if their old authors were so conscious of the sweetness of their language, that they thought their readers could never have enough of it ; and therefore, giving them credit for no previous

knowledge, they kindly mounted up to the principles of things, and informed them in *belle parole*, that in the regular enunciation of the letters of the alphabet, A precedes B, and B is immediately subsequent to A. I find among the most enthusiastic admirers of the Italian language and poetry, but few who have had patience to read many of their old prose writers, Boccacio and Machiavelli excepted.

faithfully

faithfully drawn from Boethius; after this, there is a great waste of words, and parade of science, in attempting to explain the several ratios of greater and less inequality, proportion, and proportionality, &c. where, in his commenting on Boethius, we have divisions of musical intervals that are impracticable, or at least inadmissible, in modern harmony.

In his account of the ancient system, he discovers much reading; and that is what he chiefly wishes the reader should know.

In describing the diatonic genus, in which the tetrachord is divided into tone major, tone minor, and major semitone: $\frac{9}{8}$, $\frac{1}{2}$, and $\frac{1}{3}$, for which division, commonly called the syntonous, or intense of Ptolemy, he constantly contends, we have the substance of his dispute with Vincenzio Galilei, which will be mentioned hereafter. The second part of his Institutions is chiefly employed in measuring and ascertaining intervals by means of the *Monochord*, and an instrument called the *Mesolabe*, which is said to have been invented either by Archytas of Tarentum, or Erasthenes, for the purpose of halving an interval. Whether the practical musicians of antiquity applied these calculations to their flutes and lyres, I know not; but of this I am most certain, that the greatest performers of modern times are Aristoxenians, and make the EAR the only instrument of calculation; which, by means of harmony, and the constant opportunities of comparison which the base or other accompaniment affords them, during performance, is rendered a much more trusty guide than it could be in playing a single part (c).

The elements of counterpoint, and fundamental rules of composition, which chiefly concern the practical musician, are given in the third part of the Institutes; and these are more ample, and illustrated with more examples, than in any preceding writer; particularly the laws of canon and fugue, for which no instructions

(c) It seems, however, as if the ancient instruments, upon which all the tones were fixed, had more need of the assistance of calculation and mathematical exactness in regulating their intervals than those of the violin-tribe, at present; which, except in the open strings, which often lead the performer to erroneous intonation, depend on

the strength and dexterity of the musician's hand, and accuracy of his ear, during performance. See an ingenious and useful work, called *Essay upon Tune*, published at Edinburgh, 1781; where the imperfections in the scales of modern instruments are clearly shewn, and remedies for correcting them prescribed.

have

have been given by Franchinus, though they were in such high favour during his time. P. Aaron and Vicentino have indeed started the subject, but the pursuit of it was left to Zarlino.

In the fourth part of the Institutes we have a short historical account of the inventors of the several ecclesiastical modes: it is indeed a mere skeleton of assertions, or conjectures without proof, more derived from traditional than written evidence. He here likewise gives instructions for composing in all these modes, in which he religiously keeps within their legal limits, and submits to all the restraints which antiquity had prescribed (*d*).

He gives excellent rules for composing motets and madrigals; but it is remarkable, that he advises the composer to make the *Tenor* proceed regularly through the sounds of the mode he shall chuse; and above all, that this part be so much the more smooth, regular, and beautiful, as the rest are to be built upon it; whence, says he, its sounds may be called the nerves and ligaments of all the other parts: by which it appears, that the cantilena, or principal melody, was not given, as it is by modern composers, to the *soprano*, or *highest* part; that castrati were not so common as at present; and that the tenor being the kind of voice most easily found, and more generally good than that of any other pitch, was judiciously honoured with the principal melody.

Zarlino says, that so great was the rage in his time for multiplying parts in musical compositions, that some masters, not content with three or four, which sufficed to their predecessors, had in-

(*d*) Padre Martini, *Saggio di Contrapunto*, in recommending the study and imitation of ancient masters, has well described the difficulties they had to encounter; where, after confronting the ecclesiastical scales with the secular, we have the following passage: "From an attentive and comparative view of these scales, any one desirous of learning the art of counterpoint for the service of the church, will see what diligence and efforts were necessary to unite the different qualities of *Canto-fermo* and *Canto-figurato*; and by carefully examining the examples given of both, will discover what artifices were

" used by ancient masters to avoid such
" sounds as differed from the *Canto-fermo*,
" and with what parsimony they admitted
" such accidents as *Canto-figurato* requires,
" particularly in the third and fourth
" tones; where, instead of modulating
" into *B mi*, the fifth of the mode or key,
" as is constantly practised at present, they
" have passed to the key of *A* in the fourth
" tone, and *C* in the third; by which
" means they have been able, dexterously,
" to unite the different qualities of *Canto-fermo* with those of *Canto-figurato*." P. I. p. 30, & 53.

creased them to fifty; from which, he truly observes, nothing but noise and confusion could arise (*e*). However, in another part of his book (*f*), he tells us, that Adriano Willaert had invented masses *à Due Cori, over a tre*, or, as some call them, *a Cori Spezzati*, which had an admirable effect. We know not how Okenheim disposed his thirty-six parts, in the motet already mentioned (*g*); but they would have furnished nine choirs of four voices each. In the large churches of Italy, where the performers are divided into two bands, placed in opposite galleries, all the imitations and solo parts are distinctly heard, and when united in at least eight *real* parts, completely fill the ears of the audience with all the charms of congregated sound (*h*).

Zarlino has very exalted ideas of the qualifications requisite to a COMPLETE MUSICIAN, and tells us (*i*), that it is necessary he should have a knowledge in Arithmetic for the calculation of musical proportions; of Geometry, to measure them; of the Monochord and Harpsichord, to try experiments and effects; that he should be able to Tune instruments, in order to accustom the ear to distinguish and judge of intervals; that he should Sing with truth and taste, and perfectly understand Counterpoint; that he should be a Grammarian, in order to write correctly, and set words with propriety; that he should read History, to know the progress of his art; be a

(*e*) *Dalle quali ne nasce grande strepito, & gran rumore, & quasi confusione.*

(*f*) P. III. p. 268.

(*g*) Vol. II. p. 473.

(*h*) I have never heard this species of composition attempted in our cathedrals, when a powerful band of instruments and additional voices are joined to the usual choral performers. Indeed, all our chanting and common choir service, derived from the ancient antiphonal singing, is of this kind: the performers being equally divided, and placed on each side the choir, form two bands, one of which is called the *Dean's* side, and the other the *chanters'*: *Decani, Cantoris*; but the number of voices in our cathedral establishments is not sufficient to produce the great effects which might be obtained from the united force of all the

vocal and instrumental performers that are assembled upon particular occasions, such as the Feast of the Sons of the Clergy at St. Paul's; the Triennial Meetings of the three choirs of Worcester, Hereford, and Gloucester; the Feast of St. Cecilia, at Salisbury; and occasional performance of oratorios in other cathedrals and churches of the kingdom; but above all, from the stupendous congress of musicians at Westminster-abbey. The admirable pieces composed for two orchestras by the late Mr. J. C. Bach, with which the public has been so delighted, lose much of their effect for want of distance between the two orchestras. Such elaborate compositions would have a fair trial, if a powerful band were placed in each of the galleries at the Pantheon.

(*i*) P. IV. p. 342, & seq.

master of Logic, to reason upon, and investigate the more abstruse parts of it; and of Rhetoric, to express his thoughts with precision; and further, that he would do well to add to these sciences some acquaintance with Natural Philosophy, and the Philosophy of Sound; that his ears being perfectly exercised and purified, may not be easily deceived. And adds, that he who aspires at the title of perfect musician, has occasion for all these qualifications, as a deficiency in any one of them will frequently render the rest useless. An additional qualification is now become necessary to be added to those enumerated by Zarlino, which is a perfect knowledge of the genius and powers of all the instruments for which a musician writes; otherwise he will not only embarrass a performer by useless and unmeaning difficulties, but lose opportunities of producing effects by the bow of a violin, the *coup de langue* of flutes, and a selection of the purest and best tones on other wind-instruments.

The quotations from other masters, and the little circumstances which frequently occur concerning them, are curious and amusing; but it has been often a cause of wonder, that Palestrina, his countryman and cotemporary, some of whose works were printed at Venice, in the very place of Zarlino's residence, before the last edition of his treatises came out, should never once have been mentioned among the great musicians whom he has celebrated. Of his master and friend, Adrian Willaert, he always speaks with reverence and affection; referring to his compositions in illustration of his rules and precepts. And in the dialogue *Delle Dimostrazioni Harmoniche*, which he places under the year 1562, the interlocutors are all musicians: consisting of Francesco Viola, Maestro di Capella to Alphonso d'Este, Duke of Ferrara; Claudio Merula, Organist of St. Mark's church, at Venice; Adriano Willaert, Maestro di Capella to the Republic, at whose house they assembled; Signor Desiderio, a philosopher of Pavia; and Zarlino. The plan is manifestly an imitation of Baldassare Castiglione's Cortegiano, as Castiglione's was of the dialogues of Cicero, and Cicero's of Plato.

The subjects discussed in these *Ragionamenti* are too speculative and mathematical to render their conversation very brilliant; for

what can possibly enliven the propositions and demonstrations concerning the sesquioctave tones, ratios of consonances, parallelograms, diagonal lines, angles of incidence, division of the monochord, &c.?

After all the eulogiums bestowed upon Zarlino by the learned, who are ignorant of Music, it would perhaps be more difficult to prove that the art of composition, or science of sound, was greatly advanced by his writings, than that much better Music was produced in the Roman school by Palestrina, and others, who never perused them, than by himself, or any of his disciples. The truth is, that Zarlino was not a man of genius; though possessed of great diligence, and a considerable share of learning; hence, his precepts are better than his examples. The pains he took to be correct degenerated into pedantry; and his compositions, of which he has given several specimens in his theoretical works, are totally devoid of facility and pleasing effects. He has been cited, in the second volume (*k*), in support of the modern Greeks being partial to the fourth, as a concord; but his own fondness for that interval in the two parts which he has set to a plain song, in which there are no fewer than ten naked and insipid fourths, will appear by the specimen of his style, No. I. on the following plates.

If the *Canto-fermo* upon which these parts were constructed was not made on purpose, or rendered subservient to his design by alterations, the composing a canon upon it, was certainly an enterprize of very great difficulty. Indeed the labour appears but too plainly in this, as in every composition of Zarlino. How much more successful is his cotemporary, Palestrina, in elaborate undertakings! He never seems to meet with a difficulty; all flows as if *Canto-fermo* and fugue were out of the question; as the musical reader will discover in the short movement, No. II. extracted from his *Magnificat*, in the second tone, in which art and simplicity are so well united, that a regular fugue, almost in canon, is carried on without the least appearance of restraint! But *Fugue* seems as natural to Palestrina, as *Rhyme* to Dryden.

men tes tuo rum vi fi ta; im ple

fu per na gra ti a que tu

cre af ti pec to ra.

The musical score is written on three staves. The top staff is in treble clef, the middle in alto clef, and the bottom in bass clef. The time signature is common time (C). The key signature has one sharp (F#). The lyrics are written below the staves, with hyphens indicating syllables that span across measures. The score is divided into four systems, each containing three staves. The first system is labeled 'Resolution', the second 'Canon in the 5th above', and the third 'Canto fermo'. The lyrics are: 'Ve ni cre a tor spi ri tus', 'men tes tuo rum vi fi ta; im ple', 'fu per na gra ti a que tu', and 'cre af ti pec to ra.' The score ends with a double bar line.

* CORELLI has taken this for one of the subjects of his double Fugue in the same Key. Concerto V.

If we compare the example of Zarlino with that of Palestrina, the harmony of the celebrated theorist, though strictly regular, will be found to be dry, ungrateful, and totally devoid of entertainment. He is merely able to do just what *may* be done; but nothing comes from him spontaneously, as if rules were forgotten, and art was become nature.

The best composition which I have ever seen, by Zarlino, is an *Antiphon*, in one of his works, entitled, *Modulationes sex Vocibus* (1). Three of the six parts are in strict canon, *in moto contrario*, and the other three in free fugue. This composition, which is built upon a fragment of *Canto-fermo*, and extremely artificial, is printed in only four parts; as the canon, three in one, was to be deciphered by the following motto: *Prima locum servat, thesim altera sentit, & arsim octavam duo post tempora tertia habet*. It is too long for insertion here, or I would give the curious reader an opportunity of seeing the ingenuity of the author's contrivance, in a full score of six parts, without the trouble of solving so difficult a musical problem: a labour which, if any one should have the patience to accomplish, it is very doubtful whether he would think himself sufficiently repaid for so hard a task, by the pleasure which this production would afford him, either in contemplation or performance.

Zarlino has been celebrated by Thuanus, and many other cotemporary as well as later writers, who never speak of Palestrina, or perhaps knew that he had existed; and yet, if that divine musician, instead of composing the most exquisite Music that ever had admission into the Christian church, had been the author of one dull book upon the theory of his art, he would have had his merit blazoned, and his name handed down to the latest posterity, by journalists, biographers, and all the literary heralds!

VINCENTIO GALILEI, a Florentine nobleman, and father of the great Galileo Galilei, had received instructions in Music from Zarlino; but being a performer on the Lute, and of course a

(1) *Per Philippum Ubertum editæ. Venetiis, 1556.* See also PAOLUCCI's *Arte Pratica di Contrappunto*, To. II. p. 250. Ven. 1766.

friend to the doctrines of Aristoxenus, which Zarlino, a favourer of tempered scales, constantly combats, he censured his master in a small tract, entitled, *Discorso intorno all' Opere di Zarlino*; which not passing unnoticed in the second volume of the theorist's works, Galilei, in 1581, published *Dialogo della Musica antica e moderna, in sua difesa contra Giuseppe Zarlino*, in which he becomes an open antagonist. To analyse the reasoning on both sides of this controversy, would afford the reader very little satisfaction, as it would be difficult to render the subject interesting; I shall therefore only observe, that besides the dispute with Zarlino, this work contains many miscellaneous articles, some of which are amusing and curious; however, there are others which are contradictory, and *hazarded* without sufficient information or enquiry; and the author manifests no deep research into antiquity, when he boldly asserts, p. 101, that the *Battuta*, or beating time, was *not* practised by the ancients (*m*); and p. 133, that the monochord was invented by the Arabians.

It was the opinion of Galilei (*n*), that in his time there were not more than four great performers on the organ, who were likewise composers, in all Italy, which more abounded with musicians than any other part of the world; and these were Annibale Padovano, Claudio da Coreggio, Giuseppi Guami, and Luzzasco Luzzaschi. He mentions the *Viola d' Arco* and Violone (*o*), but not the *Violin*. And complains of the musical *Embroiderers* of his time, who, by their changes and divisions, so disguised every melody, that it was no longer recognizable, but resembled the representations of the first painters in oil, Cimabue and Giotto, which required the names to be written under them for the convenience of the spectator, who without such assistance would be unable to distinguish a rose from a lily, a rabbit from a hare, a sparrow from a linnet, or a lobster from a trout.

He says (*p*), that the Italians who were in possession of the harp before the time of Dante, had it from Ireland; and adds, that it

(*m*) See proofs to the contrary, Vol. I.
P. 75.
(*n*) P. 138.

(*o*) P. 141, & 147.
(*p*) P. 143.

is only a cithara with many strings; having, when Galilei wrote, four octaves and a tone in compass. And as the harp came from the cithara, so the harpsichord had its origin from the harp: being nothing more than a horizontal harp, as every one who examines its figure with that idea, must see. The *Cetera*, or guittar, he says, was furnished to Italy by the English, who were formerly famous for making such instruments.

Galilei is said to have been assisted in this controversy by Girolamo Mei, a Florentine nobleman, mathematician, philosopher, and theoretical musician (q).

GIO. MARIA ARTUSI, of Bologna, though he is ranked only among the *minor* writers on Music, yet if his merit and importance are estimated by the celebrity and size of his volumes, he certainly deserved the attention of students and collectors of musical tracts. In his *Arte del Contrappunto ridotta in tavole*, published at Venice, 1586, he has admirably analysed and compressed the voluminous and diffused works of Zarlino and other anterior writers on musical composition, into a compendium, in a manner almost as clear and geometrical as M. d'Alembert has abridged the theoretical works of Rameau (r). In 1589, Artusi, who, like most of the musical writers of Italy, was an ecclesiastic, published a second part of his *Arte del Contrappunto*, which is a useful and excellent supplement to his former compendium (s). And in 1600 and 1603, this in-

(q) Battista Doni, in his *Trattato 2do sopra gl'Instrumenti di Tasti*, or Keyed-Instruments, says, that in the beginning of his musical studies, his partiality for the music of the ancients was greatly increased by the perusal of the Dialogue of Galilei, in which Mei had the greater part, (*dove il Mei ebbe la maggior parte*), and still more by a Treatise written by this learned personage (Mei) *De Modis Musicae*, a MS. presented to the Vatican Library by Monsig. Guarengo. *Op. Om.* To. I. p. 324. Doni has supported this assertion by no proof; but in the Vatican Library, among the queen of Sweden's MSS. there is a volume of inedited tracts and letters, written by Girolamo Mei, upon the Music of the Ancients, in which are discoverable, not only opinions similar to those of Galilei, but frequently the words

in which they are expressed in his Dialogue; particularly in a letter from Mei, dated Rome, 1572, in answer to two that he had received from Galilei, in which he seems to have been consulted concerning the usual difficulties which those have to encounter who undertake to discuss the music of the ancients. I procured a copy of this letter entire, and considerable extracts from the other writings of Mei, which indeed contain the whole substance of Galilei's Dialogue, except what concerns the controversy with Zarlino relative to the musical scales and proportions of the ancients.

(r) *Elements de Musique—Suivant les principes de Rameau.*

(s) The whole work was reprinted, with additions, *con aggiunte*, 1598.

telligent writer published at Venice the first and second part of another work : *Delle Imperfettioni della moderna Musica*. Here the author gives a curious account of the state of instrumental music in his time; and in describing a grand concert that was made by the nuns of a convent at Ferrara, in 1598, on occasion of a double wedding between Philip the III. king of Spain with Margaret queen of Austria, and the archduke Albert with the infanta Isabella, the king's sister, he enumerates the several instruments that were employed, and points out their excellencies and defects. Among these, though the Violin is just mentioned, yet nothing is said of its properties, while the cornet, trumpet, viol, double-harp, lute, flute, and harpsichord, are honoured with particular remarks, both on their construction and use; but among these, the cornet, which has been supplanted in the favour of the public by the hautbois, seems to have stood the highest in the author's estimation. The elder Doni, in his dialogue written about fifty years before, mentions the Cornet more frequently than any other instrument : *Il divino Antonio da Cornetto, perfettissimo—E M. Battista dal Fondaro con il suo Cornetto ancora; che lo suona miracolosamente.*

I have not been able to discover what instrument is to be understood in this dialogue, when Girolamo Parabosco says, *Io suonerò lo strumento*: and when it is said, M. Gio. Vaniacopo Buzzino suonando di Violone il Soprano, *come egli fa miracolosamente*, I am utterly unable to guess what instrument is meant, unless the word *Violone*, by a typographical error, has been printed for *Violino*. But to return to Artusi's Remarks upon Instruments: his hero on the cornet was Girolamo da Udine. In speaking of defects in the intonations of different instruments, I expected the violin would be celebrated for its superior perfection in that particular; but by the author's silence on the subject, I am convinced that it was either then but little used in concert, or was very ill played.

ORAZIO TIGRINI, Canon of Arezzo, published at Venice, in 1588, a Musical Compendium; *Compendio della Musica*, which he dedicated to Zarlino, from whom he received a letter of thanks for the laurel-crown with which he had bound his brows; which letter is prefixed to the work, with complimentary verses innumerable from

from other friends. This *Compendium* is not only well digested by the author, but rendered more clear and pleasant in the perusal, by the printer, who has made use of large *Roman* types, instead of *Italic*, in which most of the books that were published in Italy, before the present century, were printed. This author (*t*) is the first, in my recollection, who has censured the impropriety and absurdity of composing Music for the church upon the subject of old and vulgar ballad tunes. The cadences which he has given (*u*) in three, four, five, and six parts, and which are good examples of ecclesiastical counterpoint, have been almost all used by Morley (*x*), without once mentioning Tigrini's name, either in the text or catalogue of authors whom he has cited. Zarlino, who had adopted the four new ecclesiastical tones proposed by Glareanus, was followed by Tigrini, with whom they seem to have stopped: as no more than the eight ancient tones appear afterwards to have been acknowledged by orthodox ecclesiastical composers; and Zarlino himself, in the last editions of his works, relinquished the idea of twelve modes: as no new harmony or modulation was furnished by the additional four to the contrapuntist, without violating the ancient rules of *Cantofermo*, which confine all its melody to the different species of octave. It appears from this *Compendium*, that *Contrapunto alla mente*, or extemporary discant upon a plain-song, was still practised in the churches of Italy: as p. 125, instructions are given for this species of musical *divination*.

In the same year Don PIETRO PONTIO, at Parma, printed his Musical Discourses: *Ragionamenti di Musica*. This last work, which is in dialogue, was written by an eminent composer, of whose productions there are still excellent specimens subsisting. The author, however, though a practical musician, could not shun the pedantry of the times; but instead of going directly to work like a man of business, loses his time in calculating ratios, or transcribing them from Boethius, or other authors who had pillaged him already, bestowing upon the reader twenty pages of his small

(*t*) Lib. II. cap. xiii.
(*u*) L. III. cap. xxvi.

(*x*) *Introduction*, Part III. from p. 129
to 142. Old edit.

quarto tract upon speculative definitions, and arithmetical, geometrical, and harmonical proportions; to which, if a practical musician understood them, he would never apply for help while he had the free use of his hands and ears. At length, having impressed his reader with a due sense of his profound science and erudition, the author, descending from the *Spheres*, deigns to treat of the Music of this nether world; and in his second *Raggionamento* gives precepts and examples for the use of all the concords and discords; in the third he goes through all the ecclesiastical tones; and in the fourth and last, all the moods and divisions of time; terminating his discourse with short instructions for composing masses, motets, psalms, madrigals, and *ricercari* (y). In the course of this little work, the author, though a composer himself, frequently refers to the productions of others. Among these, his favourites seem to have been Josquin, Giachetto, Morales, Adriano, Cipriano, Palestrina, and Vincenzo Ruffo. The theorists he cites are chiefly Franchinus, P. Aaron, Lanfranco, Fogliano, Zarlino, and Galilei. As a specimen of his own abilities in composition, I shall present the reader with a movement selected by the learned Padre Martini (z), from the second book of his *Magnificats*. The subject of the composition is the Romish chant of the Magnificat in the eighth mode or tone, which is led off by the treble, accompanied by the counter-tenor and base in counterpoint. At the fifth bar, the second tenor begins the chant, and at the seventh, is answered by the first tenor, in the 5th, at the distance of which interval these two parts continue in strict canon to the end.

(y) This term, which implied any work of fancy, and original invention, was succeeded by *Fantasia*, as *Fantasia* was by *Sonata*. Adrian Willaert, and others of his

time, composed *Ricercari*, without words, for the voice, which were a species of *Solfeggi*.

The last Treatise upon Music which appeared in Italy during the sixteenth century, was the *Prattica di Musica*, by P. LODOVICO ZACCONI, of Pesaro, the first part of which was printed at Venice, 1592, and the second 1596; a publication in which the author not only proposes to give instructions for the regular composition, but the accurate performance, of every species of Music. The idea is splendid; but the world has been so frequently deceived by the titles of books, that authors are obliged to abate in their promises, in proportion as the expectations of the public are diminished. If Arts and Sciences could be acquired by the dead letter of silent instruction, every one who could read, in Italy, might, during the times under consideration, have been a musician. But though no ingenious occupation was perhaps ever yet completely taught by books, without a master, or by a master, without books, yet they are excellent helps to each other. It is hardly possible for a didactic work to satisfy all the doubts that arise in an enquiring mind during solitary meditation; particularly in the first stages of a student's journey through the rugged roads of Science. But when he has made some progress, if he should be separated from his guide, the way becomes daily so much more straight and smooth, that by the help of these kinds of charts, he will be enabled to advance with tolerable speed and facility, by himself.

Zacconi's work, though sometimes dry and tedious, contains much useful and practical knowledge. And as he is almost the only Italian writer on the subject of Music who has not bewildered himself in enquiries concerning the systems of the ancient Greeks, or the philosophy of sound, he has had the more leisure for analysing the art, and facilitating the student's progress. This author regarded Okenheim, Josquin, Isaac, Brumel, Mouton, and Senfeliio, as ancients compared with Willaert, Morales, Cipriano, Zarlino, and Palestrina; and these last, ancient, with respect to himself, and cotemporaries; and says (a), that as the ancient Greeks and Romans produced their musical effects by mere melody, united with poetry, and Josquin and other early contrapuntists, by notes of

(a) Lib. I. cap. x.

different lengths, harmonized, and worked into perpetual fugue; so the more modern, though the rules of harmony are the same, by a different disposition of concords, inventions, and contrivances, produce a greater variety of effects.

He likewise observes (*b*), that “ every age has vainly thought
“ its Music brought to as great a degree of perfection as was possible; but it is always found that the next age continues to change,
“ and still to think the same. Okenheim, the master of Jusquin,
“ and even in the days of Jusquin, John Mouton, his scholar, had
“ the same ideas of their own improvements; yet, since their
“ time, Music has not stood still, but made great advances towards
“ perfection, being more light and pleasing (*c*).”

The change in musical *modes* has continued to our own time, and will doubtless continue to the end of *all* time (*d*); for melody, as has been already observed, being a child of Fancy and Imagination (*e*), will submit to no theory or laws of Reason and Philosophy; and therefore, like Love, will always continue in childhood (*f*).

Zacconi's chief labour and merit in the third book have been the explanation of the moods, and correction of errors in the notation of old composers, to which his work will serve as a useful *Errata*. In

(*b*) Cap. xxiii.

(*c*) We as frequently mistake concerning the past as the future, and judge, from what we hear, of all that is to be heard in Music. It has been generally imagined that there were no good fugues or choruses, particularly accompanied with instrumental parts, till Handel's time; but Colonna, long before, had composed many in the same rich and bold style. We supposed that Tallis and Bird almost invented, and greatly surpassed all others in the Church style; but whoever examines the works of Constantio Festa, Palestrina, Orlando di Lasso, Costanzo Porta, Cipriano di Rore, and many of their contemporaries, and even predecessors, will be obliged to acknowledge, that the opinion was formed *sans connoissance de cause*. Palestrina, however, has not only been said to have flourished in the time of Leo X. who died before he was born, but

imagined the *Father* of good Church Music, and the first, even in Italy, who settled the laws of harmony, and fugue. This opinion has been formed and adopted with equal haste and ignorance of Musical History, and the progress of the art; for we find that Okenheim, Josquin, Henry Isaac, De la Rue, Brumel, Mouton, Feven, or Feum, Richafort, Morales, &c. &c. were all great composers before Palestrina had existence; and this has already been proved, not only from the writings of others, but from their own works, which still subsist.

(*d*) P. 217, and 337.

(*e*) See above, p. 150.

(*f*) A description of the godling, given in a song, seems applicable to melody:

Love is just like April weather,
Ne'er the same an hour together;
Froward, fickle, wanton, wild:
Nothing, nothing but a *Child*.

Book

Book I. he dwells much on the superiority of the singing and singers of his own time, over all that preceded them (*g*); and has a long chapter (*b*) upon the manner of gracing and embellishing a melody, where he tells us, *Che stile si tenghi nel far di gorgia; dell' uso de i moderni passaggi, come si fiorischino le cantilene*; and speaks of *acconciature*, as the modern Italians do of *riffioramenti*, or graces. The divisions, however, into which he breaks passages, in order to *embellish* them, if adopted by an Opera-singer of the present times, would be like a modern fine lady appearing at Court in the furbelows and flounces of Queen Elizabeth, or a fine gentleman in the peruque of Sir Cloudesley Shovel.

After this account of the musical *Theorists* in Italy, we shall resume our enquiries into the state of *Composition*, and endeavour to trace its progress in the several *Schools* of that country.

ROMAN SCHOOL OF COMPOSITION.

ANDREA ADAMI (*i*) tells us, that the records of the Pontifical Chapel were destroyed at the burning of Rome, in 1527, by the army of the Emperor Charles V. and that the names of composers and singers had been entered in the chapel books since that event in a very confused manner, till the time of Palestrina. However, from the dates affixed to memorandums concerning some of them, we may gather, that not only Netherlanders and Spaniards had been employed to compose, and sing in the chapel, before the time of Palestrina, but natives of Italy; of these Adami names, as Maestri di Capella, Lodovico Magnasco da Santa Fiora, afterwards Bishop of Assisi, between the time of Josquin and Arcadelt; Carlo d'Argentilly (*k*), an excellent composer, some of whose works, transcribed in 1543, are preserved in the Vatican library; and Simone Bartolini Perugino, sent at the head of eight singers to the Council of Trent, 1545.

(*g*) Cap. LIX.

(*b*) Fol. 58. Cap. LXVI.

(*i*) *Offerv. per ben regol. il Coro.*

(*k*) This seems a French name, Italianized.

In Anton-Francesco Doni's *Dialogo della Musica*, printed at Venice in 1544, when Palestrina was only fifteen years old, we find, among the names of many Tramontane composers, several natives of Italy, as well as in his *Libreria*, edit. of 1550, which was not the first. Indeed most of the *performers* mentioned in his Dialogues are Italians; but in his *Libreria*, where we have a list of such Music as had been printed at Venice before 1550, are the Motets and Madrigals, in four parts, of Animuccia; Anselmo, two books; Antonio Cimello, Bernardino, two books; Bertoldo Balducci Donato, Claudio Veggio, Fran. Corteccia, Fran. Biffetto, Candonio, Ferabosco, Fama, Giov-Gero, Gian da Ferrara, Giordan, Gabriel Martinengo, Hoste da Reggio, Lod. Novello Mascarate, Martoretta, Perisson, two books; Paolo Aretino, two books of Madrigals and *Lamentationi*; Pietro Paolo Raguzzoni, and Vincenzo Ruffo.

Among the composers of motets and madrigals, in five parts, sixteen are Italians; of duos and trios eleven; and in his list of masses published by Petruccio, as already related, besides those composed by Josquin, Giachet, and Morales, a set by Gasparo Alberti is mentioned, who seems by his name to have been an Italian, and perhaps was the same musician as is called Gaspar by Franchinus and the printer Petruccio.

Pietro Aaron, in his *Lucidario in Musica*, described above, seems to defend the Italians from the injustice with which they had been treated in proverbial national characters, which say, that the "French sing, the English shout, the Spaniards cry, the Germans bowl, and the Italians make the noise of goats: *Caprizare* (1)." "These general censures," he says, "can only have proceeded from envy and malignity, as Nature has not been so partial to the French, but that the Italians and other people have had as excellent musicians as they; indeed it may with truth be said, that the natives of every country in Europe have been at school in Italy, which is the standard of excellence in all the arts, and

(1) In a set of MS. Music-books belonging to Christ-church, Oxford, transcribed 1581, we have these national characters in

Latin:

Galli cantant, Angli jubilant, Hispani plangunt, Germani ululant, Itali caprizant.

" where

“ where there not only *have been*, but still *are*, so many admirable
 “ fingers, that it would be tedious to enumerate them ; however,
 “ in justice to my country, I must name a few, who will be long
 “ remembered.” He then gives a list of fifteen fingers, *by book*,
Cantori a Libro ; twelve fingers *to the lute* ; and eleven female
 fingers, both *by book*, and *to the lute* (m).

The Italians themselves place Palestrina at the head of the Roman School ; however, it is easy to prove that this celebrated establishment was not formed by Palestrina, as that wonderful harmonist, though perhaps the first in abilities, did not precede all his countrymen as Maestro di Capella either of St. Peter's Church, or the Pontifical Chapel. The imperfect list given by Adami, mentions several who were placed at the head of the chapel anterior to Palestrina ; and all the accounts of this gifted man allow that he succeeded Giovanni Animuccia as Maestro di Capella of St. Peter's, at Rome, in 1569.

GIOVANNI ANIMUCCIA, a native of Florence, was no less admired on account of his musical abilities, than respected for the excellence of his morals. He is celebrated by Adami (n), and Padre Martini (o), as one of the companions of St. Filippo Neri, who first applied Music to the purpose of attracting company to the *Chiesa Nuova*, or New Church, at Rome, on Sunday evenings, to hear his pious discourses, or *Orations* ; whence sacred dramas, or mysteries and moralities, *in Music*, were afterwards called ORATORIOS. Animuccia composed the first *Laudi*, or hymns in parts, that were performed on these occasions ; which, from a desire of rendering them more interesting, being sung in the cathedral and antiphonal manner, in alternate stanzas, and in dialogue, with a solo part now and then for a fine voice and favourite singer, were, at length, wrought into regular dramas (p).

(m) It is not clear what was meant by the expressions of *singing by book*, and *singing to the lute* ; unless to distinguish those who accompanied themselves upon that instrument, from others who likewise sung by note, but without accompaniment.

(n) P. 172.

(o) *Sagg. di Contrap.* P. I. p. 129.

(p) Oratorios still continue to be performed at Rome on Sunday evenings before the sermon, in the *Chiesa Nuova*. See *Ital. Tour.* Art. ROME.

In a manuscript which I procured at Rome, under the title of *Studij di Palestrina*, besides the intonations of the church in counterpoint, there are chants in four and five parts, not only by himself, but the following great composers of the Roman School, during the sixteenth century: Jusquin, Morales, P. Aaron, Anton Cifra, Bernard, and Giov. Maria Nanino, Animuccia, Palestrina, Anerio, Soriano, Rubino, Giovanelli, Ruffo, Vecchio, Montanaro, Magiurana, Matalarte, Rosello or Ruscello, Tortora, Anibale, and Benevoli.

Some of these admirable fragments of choral harmony and modulation are in *contrappunto semplice*, of note against note, and some *figurato*, where the parts move in notes of different lengths, but not *fugato*, or in fugue or imitation.

The following chant to the *Miserere*, in almost simple counterpoint, has the name of Animuccia prefixed to it.

But compositions of a higher class are still subsisting of this master. His madrigals and motets, of four and five parts, published at Venice, 1548, and his masses at Rome, 1567, dedicated to the Canons of the Vatican, were the most celebrated. From these Padre Martini (q) has selected two movements, as illustrations of his

(q) *Sagg. di Contrap.* P. L. p. 129 & 181.

own excellent precepts for composing in the sixth and eighth tones, *a capella*; and to these I refer the admirers of ancient choral compositions, as they are too long for insertion here.

It has been frequently observed, that the life of a studious man, whose mind is more active than his body, affords few materials for biography, even if every transaction of his life were known; but at a remote period, when every lineament and trace of character is obliterated, it is with difficulty that the time and place, even of his existence, can be established, or the works enumerated which his genius and diligence have produced.

GIOVANNI PIERLUIGI DA PALESTRINA, whose works have been so justly admired and celebrated, is of this class; for little more has been recorded of his life than if it had been wholly spent in a hermitage. His birth, however, has been fixed, with some degree of certainty, in the year 1529, at *Palestrina*, the *Præneste* of the ancients. Italy being divided into many independent states, each of which has a distinct and separate honour to maintain, the natives are not only very careful in settling the spot where a man of genius was born, but of recording the place where he was educated, with the name of his master; and as the painters of Italy are appropriated to different schools, so are the musicians; and a composer or performer of great abilities is seldom mentioned without his country, by which it is known that he is of the Roman, Venetian, Neapolitan, Lombard, or Bolognese School, each of which has some peculiar characteristic that enables one intelligent musician of Italy immediately to discover the school of another, by his works, or performance. To these distinctions, the natives of other countries so little attend, that when it is known that a musician comes from Italy, no further enquiry is made.

From this ancient custom of naming the master with the scholar and his country, all the writers of Italy who have given any account of Palestrina have thought it necessary to say that he was a scholar of Gaudio Mell, *Fiamingo*, a Fleming; by whom they have been generally understood to mean Claude Goudimel, a native of Franche-Comté, and a Huguenot, who was one of the first that set the trans-

lation of the Psalms, by Clement Marot and Theodore Beza, to Music; and who was murdered at Lyons in 1572, on the fatal day of the Massacre of Paris (r).

There are certain difficulties in this account and supposition, which it is not easy to solve: Antimo Liberati (s), Andrea Adami (t), Padre Martini (u), and others, as *Italians*, could have no interest in falsifying or misrepresenting facts, in order to prove the greatest composer for the church which their country has ever produced, the disciple of a foreigner; yet they not only assert this, but likewise that Gio. Maria Nanino, a learned Roman composer, was a fellow-student with him under Goudimel; that they were united in strict friendship, and opened a college, or Music-school, together, at Rome, in which they had many scholars, and among the rest Bernardino Nanino, the younger brother of Gio. Maria, Antonio Cifra, and others. Who Mell was, if different from Goudimel, I know not; of his works or name I have met with no memorial; Walther, indeed, speaks of one Renatus, and Mattheson of Rinaldus De Mell, a Flemish composer, who flourished about 1538, and who published *Litanie de B. Virgine*, at Antwerp, in 1589; yet though these dates correspond sufficiently well with the age of Palestrina, it does not appear by these or any concurrent circumstances that he, or Goudimel, was ever at Rome, or that Palestrina had taken a Tramontane journey to acquire instructions in Flanders or Franche-Comté. Indeed the fact is not of sufficient importance to merit a long discussion; I shall therefore leave it as I found it: for who can be very solicitous to know of what Master Palestrina learned the mechanical rules of his art, which were established and very well known, at least a century before his superior genius turned them to so good account?

In some miscellaneous publications during our author's younger time, before his fame was established, we find him frequently called

(u) In a MS. list of the Roman School, of contrapuntists, with which he favoured the author of this work.

Gianetto da Palestrina (x). He has this title in the *Secondo Libro delle Muse*, a set of madrigals so called, that was printed at Venice, 1559; and in another set, under the title of *Amorosi ardori di diversi eccellenti Musici*, as well as in the second book of Cipriano's Madrigals, printed likewise at Venice, 1571, in four parts, where there is a CANZON DI GIANETTO, *sopra di Pace non trovo*, con 14 Stanze, published about the same time. It has, however, been doubted whether this was not a different composer from the same city; but having scored these several pieces from the printed copies, preserved in the British Museum, and elsewhere, I find them so much *alla Palestrina*, that I have not the least doubt concerning their author. Indeed, critical enquirers, who wish to be more perspicacious than their predecessors, sometimes carry research and doubt so far as to dispute the most trivial as well as the best authenticated facts. Thus, with respect to Palestrina, the records of the Pontifical Chapel; the fidelity of Antimo Liberati, and Andrea Adami, both of the same chapel, and curious enquirers, who lived on the spot almost a century nearer his time than the present; and the respectable authority of the candid and cautious Padre Martini, are all rejected, seemingly to answer very little purpose.

However, the few circumstances and outlines of Palestrina's life that have been preserved from oblivion, and seem the most indisputable, are: that he was born in the year 1529 (y); that having distinguished himself as a composer, about 1555, he was admitted into the Pope's Chapel, at Rome; in 1562, at the age of 33, he was elected Maestro di Capella of *Santa Maria Maggiore*, in the same city; as upon the death of Giovanni Animuccia, in 1571, he was honoured with a similar appointment at St. Peter's; and lastly,

(x) It has ever been a common practice with the Italians, in familiarity and good-humour, to call a young person of the name of *Giovanni*, *Gianetto*; as John with us, during youth, is styled Jack, or Johnny. Indeed, if farther proof were necessary that this title was sometimes given to the great *Giovanni Palestrina*, it could be furnished from his mass upon the subject of an old Italian song, *Vesliiva i Colli*, which is the third in his ninth Book of Masses, being printed in one of the Antwerp collections,

under the name of *Gianetto Palestrina*.

(y) This date invalidates a note of Mr. Galliard's translation of Tosi, p. 3. § 4. and somewhat diminishes the force of a flourish in Dr. Brown's *Rise, Union, Separation, and Corruption of Music and Poetry*, in which it is said that Palestrina was "one of the ornaments of Leo X.'s time;" as, unluckily, that Pontiff dying in 1521, quitted the world eight years before Palestrina arrived in it.

having brought choral harmony to a degree of perfection that has never since been exceeded, he died in the year 1594, at the age of sixty-five (z).

The following account of his death and burial was entered in the register of the Pontifical Chapel by Ippolito Gamboce, *Puntatore*, who at that time had the care of the records.

“ February the 2d, 1594. This morning died the most excellent musician, Signor Giovanni Pierloisci, our dear companion, and Maestro di Capella of St. Peter’s Church, whither his funeral was attended not only by all the musicians of Rome, but by an infinite concourse of people, when *Libera me Domine* was sung by the whole college.” To this account Adami adds that of Torrigio (a), who says: “ In St. Peter’s Church, near the altar of St. Simon and St. Jude, was interred, in consequence of his extraordinary abilities, Pierluigi da Palestrina, the great musical composer, and Maestro di Capella of this church. His funeral was attended by all the musicians of Rome, and *Libera me Domine*, as composed by himself, in five parts, was sung by three choirs. Upon his coffin was this inscription: *Joannes Petrus Aloysius Prænestinus Musicæ Princeps.*”

It would be endless to transcribe all the eulogiums that have been bestowed upon Palestrina, by musical writers, though he has seldom been mentioned by others; but it is left to artists to take care of their own fame: none but Painters have written the Lives of Painters, or Musicians those of Musicians. Heroes, indeed, are consigned to historians; and the learned are seldom negligent of themselves.

Indeed very honourable mention was made of our great contrapuntist during his life-time by Giovanni Guidetto (b), chaplain to Pope Gregory XIII. who being appointed to collate, correct, and regulate the choir service of St. Peter’s Church, 1582, says, that he was unwilling to depend solely on his own judgment in this undertaking, and therefore had applied to that Prince of Musicians,

(z) The few incidents that are recorded of this divine harmonist have already been extracted by the author of this work from Andrea Adami, and inserted in a preface to the *Miserere* of Allegri, and other pieces that are performed in the Pope’s Chapel

during Passion-week, printed by Bremner, 1773, to which the reader is referred.

(a) *Grotte Vaticane*. Parte II. p. 166.

(b) *Director Chori ad Usus Sacros. Basilic. Vatic.* Epist. ad Capitulum.

Giovanni Pierluigi da Palestrina, to superintend and correct the whole work, an office which he was so obliging as to undertake; "and if," says he, "the compilation be found to have any merit, it must be chiefly ascribed to his kind assistance (c)."

Some judgment may be formed, says the learned author of the *Essay on Counterpoint*, so often mentioned (d), of the great veneration in which he was held by the professors of his own time, from a collection of Psalms, in five parts, that was published in 1592, and dedicated to Palestrina by fourteen of the greatest masters of Italy at that time; among these were Pietro Pontio, already mentioned, and Costanzo Porta, who will be distinguished hereafter, as a composer, whose abilities, in point of learning and contrivance, were truly wonderful.

By the friendly assistance of Signor Santarelli, I procured at Rome a complete catalogue of all the genuine productions of Palestrina, with the several dates and forms of their publication, title of each piece, and the name and residence of the printer. These are classed in the following manner:

MASSSES in four, five, and six parts, twelve books; of which *Lib. I.* appeared at Rome in folio, 1554, when the author was in the twenty-fifth year of his age; and in that city only went through three several editions during his life. *Lib. II.* of his Masses, which includes the celebrated composition entitled *Missa Papæ Marcelli*, was published likewise at Rome, in 1567. Of this production it has been related by Antimo Liberati, in the letter above cited, and after him by Adami, Berardi, and other musical writers, that the Pope and Conclave having been offended and scandalized at the light and injudicious manner in which the mass had been long set and performed, determined to banish Music in parts entirely from the church; but that Palestrina, at the age of twenty-six, during the short pontificate of Marcellus Cervinus, intreated his Holiness to suspend the execution of his design till he had

(c) *Licet in Muscis notis collocandis, conjungendis, separandis, augendis, expungendis, cum vetustis Vaticanæ nostræ Basilicæ, tum recentioribus Antiphonariis, ac Psalteriis usus fuerim, nequaquam tamen, aut illis, aut judi-*

cio meo fidere volui, sed viro Musicæ Artis facile principi Joanni Petro Aloisio Prænestino Capellæ nostræ Magistro, opus totum inspiciendum, ac corrigendum tradidi, &c.

(d) *Saggio di Contrap. P. II. p. 74.*

heard

X { heard a mass, composed in what, according to his ideas, was the true ecclesiastical style. His request being granted, the composition, in six parts, was performed at Easter, 1555, before the Pope and College of Cardinals; who found it so grave, noble, elegant, learned, and pleasing, that Music was restored to favour, and again established in the celebration of sacred rites. This mass was afterwards printed, and dedicated to the successor of Marcellus, Pope Paul IV. by whom Palestrina was appointed Maestro di Capella to the Pontifical Chapel (e).

The rest of his masses appeared in the following order: *Lib. III. Romæ per Valerium Doricum*, 1570, in folio—Ven. 1599. *Lib. IV. Venet. per Ang. Gardanum*, 1582, quarto. V. *Romæ*, 1590. VI. *Ven. 1596 (f)*. VII. 1594. VIII. and IX. Ven. 1599. X. and XI. Ven. 1600. And XII. without date, or name of the printer. Besides this regular order of publication, these masses were reprinted in different forms and collections, during the sixteenth and seventeenth centuries, in most of the principal cities of Italy; of which editions I was furnished with memorandums (g).

The next division of Palestrina's works consists of MOTETS for five, six, seven, and eight voices, five books, at Rome and Venice, 1569, 1588, 1589, 1596, and 1601. *Motets* for four voices, *Lib. I. Romæ*, 1590. II. *Venet. 1604*. Two books of OFFERTORI, a 5 & a 6 voc. *Romæ*, 1593. LAMENTATIONI, a 4 voc. *Romæ*, 1588. Hymns for five voices, *Ven. 1598*. LITANIE a 4, *Ven. 1600*. MAGNIFICAT, 8 Tonum. *Romæ. 1591*. MADRIGALI *Spirituali*, two books, Rome and Venice, 1594.

(e) The friends of Choral Music will doubtless be curious to have a faithful and minute account of a composition which had sufficient power to preserve their favourite art from disgrace and excommunication; and having before me an accurate score of it, which Signor Santarelli himself procured for me out of the Sistine Chapel, where it is still performed, I can venture to assert, that it is the most simple of all Palestrina's works: no canon, inverted fugue, or complicated measures, have been attempted throughout the composition; the style is

grave, the harmony pure, and by its facility the performer and hearer are equally exempted from trouble.

(f) This, and all that were published after the author's decease, which happened in 1594, must have been second editions.

(g) Signor Santarelli was so obliging as to consult the archives of the Pope's Chapel, in order to complete the catalogue of his favourite Palestrina's works, concerning many of which he furnished me with interesting and curious remarks.

MOTET

Motetus

Aloisii Prænestini

A musical score for a five-part setting of the words "me Et fa-naf-ti me". The score is written on five staves, each with a different clef (soprano, alto, tenor, bass, and a fifth part). The lyrics are written below the staves, with some words appearing on multiple staves. The music features a mix of whole, half, and quarter notes, with some rests. The key signature has one flat (B-flat).

Attempt at Expression, in a Madrigal of PALESTRINA.

A musical score for a two-part setting of the words "Cru-da De-a della mia acer-ba e re-a". The score is written on two staves, each with a different clef (soprano and alto). The lyrics are written below the staves. The music features a mix of whole, half, and quarter notes, with some rests. The key signature has one flat (B-flat).

But a more curious instance of Musical imitation and Expression occurs in one of his MADRIGALI SPIRITUALI, where the words AMARISSIMO FELE are expressed by the following crude discords.

A musical score for a two-part setting of the words "Se Amarif-fimo S'A-marif-fi-mo fe-le". The score is written on two staves, each with a different clef (soprano and alto). The lyrics are written below the staves. The music features a mix of whole, half, and quarter notes, with some rests. The key signature has one flat (B-flat).

To the above ample list of the works of this great and fertile composer, are to be added, *La Cantica di Salomone*, a 5; two other books of *Magnificats*, a 4, 5, & 6 voc. One of *Lamentationi*, a 5; and another of secular *Madrigals*. These have been printed in miscellaneous publications after the author's death; and there still remain in the Papal Chapel, inedited, another mass, a 4, upon the hexachord, *ut, re, mi, fa, sol, la*; with his *Missa Defunctorum*, a 5, and upwards of twenty motets, chiefly for eight voices, a *due cori*.

Nothing more interesting remains to be related of Palestrina, than that most of his admirable productions still subsist. Few of his admirers are indeed possessed of the first editions, or of *all* his works complete, in print or manuscript; yet curious and diligent collectors in Italy can still, with little difficulty, furnish themselves with a considerable number of these models of counterpoint and ecclesiastical gravity.

If we consider the operose and slow manner in which works of this kind are conducted, from the many *real* parts they contain, and of which some are generally moving in canon, and the rest *always* in fugue, we shall be as much astonished at the number of his productions, as pleased with their effects. Indeed the works of Aristotle, Cicero, or the elder Pliny, among the ancients, or of Fabricius, among the moderns, were hardly more numerous. With the union, indeed, of great *erudition* and great industry we are not surpris'd; but *Genius* is not often so voluminous.

Palestrina having brought his style to such perfection, that the best compositions which have been produced for the church since his time are proverbially said to be *alla Palestrina*, it seems as if this were the place to discuss its merit.

Though good taste has banished fugue, canon, and elaborate compositions from Dramatic Music, yet sound judgment has still retained them in the Church; to which, from the little use that is made of them elsewhere, they are now in a manner appropriated (*b*).

On

(*b*) Indeed there seems no more impropriety in their being *occasionally* used in the *chamber*, than private prayer, or family devotion. It is the Church and Stage that I wish

On this account, like the *Canto-fermo* of the Romish service, however one chant may resemble another, and the subject and modulation of fugues may be stolen, yet they will still be in the style of Choral Music, and never awaken ideas of secular songs or profane transactions, as they will at least be grave and decorous, if not learned and ingenious.

In the compositions of Palestrina there is, indeed, no *unity of melody*; but as all the parts have an equal share of importance, and as hardly a note appears in them without some peculiar intention and effect, they cannot, like the *remplissage* of a modern concerto or opera song, be composed with as much rapidity as they could be transcribed; little invention and few flights of fancy are required; yet there is a degree of happiness and genius in finding a few uncommon notes that are favourable to fugue and canon, as well as in creating new and graceful passages in melody. Indeed, both the choral and secular style have their peculiar difficulties, beauties, and defects.

Whoever is accustomed to the vocal fugues of Palestrina, Carissimi, or Handel, will be fastidious with respect to those of other composers of equal learning. Preaching upon a text has been called a Gothic contrivance; and yet what admirable lessons of piety and virtue have been produced under the denomination of Sermons! Fire, genius, and harmonical resources are discoverable in fugues, as well as in modern songs, solos, or concertos: a musical student, therefore, unacquainted with the laws of fugue, is advanced but a little way in composition; as the hearer who receives no pleasure from ingenious contrivance and complicated harmony, is but a superficial judge. My wish is to resolve the discords of contention, to augment the pleasure of both parties, and extend the compass of their views; that, like the Music composed *a due cori*, the friends of harmony and melody may agree, though performing different parts, at a distance from each other.

wish wholly to be separated; for it has long appeared to me, that whoever brings the rites of the Church to the Theatre, or the-

atrical levity to the Church, is guilty of want of taste, judgment, and due reverence for the religion of his country.

I

But

But to return to Palestrina. It appears from the writings of this most venerable and exquisite harmonist, that he had not only studied the greatest masters of his own time, but of the preceding century; and after vanquishing the difficulties of their style and contrivances, he demonstrated, by his early works, that he could put them all in practice, with the admirable improvement of a more polished harmony, and flowing melody; consulting in every difficult enterprize the *Ear* more frequently than the *Eye* (i).

However, with all his merit of simplicity, he was not the first to quit the *strange proportions* which pedantry, and an affectation of mystical science, had introduced, as he uses them all in his mass upon the melody of *L'Homme Armé*, which is full of vain and useless difficulties (k). He likewise, for some time, adhered to the absurd practice of composing masses upon vulgar tunes, as appears by the titles as well as subjects of those in his second and third books. However, he discontinued this Gothic custom, after the year 1570, when, perhaps, a better taste became general.

The first instance I have seen of an attempt to express the sentiment of the poet by extraneous modulation and unusual discords, is in a madrigal of our author's second book, à 4. *Alla riva del Tebro*, where, after a flat sixth to D, the fourth of the key of A, we have a $\frac{7}{5}$ unprepared, or rather *à pedale*; which, in the sixteenth century, was a very bold and uncommon combination (l); and, upon the whole, it appears to me, notwithstanding the general gravity and

(i) He not only knew, says Padre Martini, how to avoid the roughness, but the languor of anterior composers; and with a harmony more full and grateful, he infused a modest and decent cheerfulness in the melody of every part: and without incommoding the singer by unnatural difficulties, formed a complete whole. *Saggio di Contrappunto*. Parte I. p. 51.

(k) Indeed, Palestrina's mass upon *L'Homme Armé* is so difficult to decipher, that Zacconi has selected and written a Commentary upon it, for the use of those who study Musical Proportions. It is, however, notwithstanding Zacconi has bestowed 13 folio pages in explaining the nota-

tion, and solving the canons, still extremely difficult to score; and if, as has been said, the "combinations in Palestrina's harmony naturally suggest themselves to a nice and unprejudiced ear," it is wonderful that such composers are not more common.

(l) Many of the best works of Palestrina, and other great composers in the church style, with an excellent Commentary upon them, have lately been very correctly published, in score, by the learned Padre Martini, in his *Saggio di Contrappunto*, so often cited. But for instances of Palestrina's expression of words, by modulation, see above, at the bottom of the plate, p. 194.

elaboration of Palestrina's style, that genius glows in all his productions, in spite of the trammels of *Canto-fermo*, canon, fugue, inversions, diminutions, augmentations, or whatever would chill or petrify any other than himself.

It is hoped that no apology will be necessary for the length of this article, which "the reader can make as short as he pleases." In a general *History of Ancient Poetry*, Homer would doubtless occupy the most ample and honourable place; and Palestrina, the Homer of the most *Ancient Music* that has been preserved, merits all the reverence and attention which it is in a musical historian's power to bestow.

GIOVANNI MARIA NANINO *da Vallerano* was admitted into the Pontifical Chapel, as a tenor singer, in 1577. He was a fellow-student and in strict friendship with Palestrina. These two excellent masters opened a Music-school together at Rome, where they formed many great scholars, among whom was Giov. Bernardino Nanino, a younger brother of Maria, according to Walther, but called by P. Martini, his nephew, and Antonio Cifra. Antimo Liberati informs us of a circumstance, which will be readily believed; that Palestrina had no relish for the drudgery of attending a school, having his thoughts so much absorbed in his own studies; and that, leaving the care of the disciples to Nanino, his visits were not very frequent or long, calling only from time to time in order to explain to them such uncommon difficulties and doubts as impeded the progress of their studies, and to adjust the disputes which arose among the professors, who in great numbers constantly attended the lectures there. Though Nanino was regarded by the Romans as one of the most learned musicians of his time, yet Sebastian Raval, a Spaniard, then at Rome, thinking they were all mistaken, and that he was himself very much his superior, challenged him and his countryman Soriano, another friend of Palestrina, to a musical combat, which was to be determined by a weapon they had both frequently wielded, the pen: in this engagement, however, the Spaniard was defeated. Many different sets of madrigals, by Nanino, were published at Venice during the latter end of

of the sixteenth century, which are now difficult to find (*m*); there are, however, in the *Studij di Palestrina*, described above, several of his chants, which are excellent.

BERNARDINO NANINO, whom Antimo Liberati likewise calls the younger brother of Maria, has been celebrated by this writer as a person of very extraordinary abilities, who, by an inventive and original style, joined to a perfect knowledge of harmony, had greatly improved the art of composition (*n*). The only productions which I have seen of this master are two or three chants in the *Studij di Palestrina*.

FELICE ANERIO is said by Walther to have been a disciple of Maria Nanino, and by Adami to have succeeded Palestrina as Maestro di Capella of the Pontifical Chapel. These two circumstances alone imply no common degree of merit; and, according to Adami, many admirable compositions by this author were preserved in the Pope's Chapel, and in daily use, and he seems to have been regarded as a great master of his profession. His madrigals for six voices were printed at Antwerp, 1599; and canzonets for four voices, at Francfort, in 1610, which for a time enjoyed a considerable share of public favour (*o*).

ANTONIO CIFRA, a disciple of Palestrina and the elder Nanino, after being employed as Maestro di Capella to several churches in Rome, and to the Archduke Charles of Austria, brother to the

(*m*) P. Martini, *Storia della Musica*, has given in his catalogue of authors the titles of two very curious works: the first of these, by G. M. Nanino, is called *Cento-cinquanta sette Contrappunti e Canoni, a 2, 3, 4, 5, 6, 7, 8, 11 Voc. Sopra de Cantorfermo intitolato la Base di Costanzo Festa*; the second is styled *Trattato di Contrap. con la regola per far Contrappunto a mente, di G. M. Nanino e Bernardino Nanino, suo Nipote*.

(*n*) As the expressions of Liberati, who is a high colourist, are very strong, the reader shall have them in the original words: speaking of the School of Palestrina and Maria Nanino, and the scholars

it produced, he says, "*Tra i quali fu primieramente Bernardino suo fratello minore, che riuscì di mirabile ingegno e diede maggior lume alla professione con la novità della sua vaghissima harmonia in ogni stile, e piena di grand' osservanza e dolcezza.*"

(*o*) Canzonets for four and five voices are said by Adami, p. 174. to have been invented by Alessandro Romano, a singer, admitted in the Pope's Chapel 1560, who was likewise so exquisite a performer on the viol, that he obtained the cognomen of Alessandro della Viola. He likewise composed motets, accompanied by many instruments, which seem to have been the first of the kind.

Emperor Ferdinand II. was invited to Loretto, where, in the same capacity, he spent the rest of his days. His publications, though very numerous, are excellent in their kind: correct, artificial, and as flowing as the respect to *Canto-fermo* and ancient rules would then admit. His abilities are much celebrated by Antimo Liberrati; and it is observed by Walther, that in the latter part of this composer's life many musical improvements and discoveries were made, in which he had a considerable share. One of his works, printed at Venice, 1629, contains motets and psalms for twelve voices, *a tre cori*; and Padre Martini, in his *Saggio di Contrapunto* (p), has inserted an *Agnus Dei*, for seven voices, from a mass by this author, entitled *Conditor Alme Syderum*; in which it is contrived that two of the parts of this movement are in perpetual canon, *alla roverscia*, while the other five parts are in close, but free, fugue. The subject of this inverted canon is an ancient chant of the church to the Advent hymn. The answer is made in the sixth above the subject, in precisely the same intervals, *in moto contrario*.

The skill, perseverance, and resources which the author has manifested in this composition, would astonish secular composers of the present times. It would, however, comfort them, and keep off despair, if they were to see what a wretched figure this learned author cuts in *secular* Music. In 1614, he published at Venice a work, entitled, *Sberzi et Arie a una, due, tre, et quattro Voci, per cantar nel Clavicembalo, Chitarone, ò altro simile Istromento*. Nothing can be more confused, uncouth, and inelegant, than the melodies of this work, in which he meant to be gay and gallant. In the first *air*, as it is called, there are faint glimmerings of taste in a few of the passages and closes; but the whole movement is unphrased, unaccented, and more inclining to recitative than air. We cannot help respecting these old masters for their science in ecclesiastical compositions, in which they have left such admirable examples of pure harmony and ingenious contrivance; yet, whenever, like Mr. Vellum, in Addison's comedy of the Drummer, they chuse

to be *jocular*, or to attempt grace and gaiety, they become grotesque and ridiculous. Harmony and fugue are long-lived; but no powers of invention can give longevity to divisions and embellishments, which are either written for particular talents, or the gratification of caprice and fashion.

RUGGIERO GIOVANELLI of Velletri, who, though he was not admitted in the Pope's Chapel till 1599, had distinguished himself, and received the meed of merit long before, by being first elected Maestro di Capella of the church of S. Luigi, S. Apollinare, and afterwards, upon the demise of Palestrina, had the singular honour of being appointed his successor, in the same office, at St. Peter's. Giovanelli published many motets, psalms, madrigals, and masses; compositions which, at this time, supplied the place of services, anthems, oratorios, opera songs, and cantatas, throughout Europe.

After the examples already given of Palestrina's style of writing, that of the five masters last mentioned, as they were all of the same school, and nearly the same period, needs no illustration. Indeed, the works of cotemporary composers, at this time, of grave and sober science, were more likely to resemble each other than at a later period, when imagination was unchained, and her wild and wanton effusions had insinuated themselves into every musical production. There are, however, in the *Studij di Palestrina*, chants by all these great contrapuntists, which are relics of harmony and modulation, truly ecclesiastic and venerable.

Ears not accustomed to ancient modulation would at first be surprised, and, perhaps, offended, with some of the transitions in these fragments; but they must be differently organised from mine, if, after the prejudice of habitude is a little subdued, they should continue insensible to the solemnity and grandeur of such harmonical combinations.

The most chearful species of *secular* Music that was now cultivated by masters of the first class, was that of *Madrigals*: a style of composition that was brought to its highest degree of perfection about the latter end of the sixteenth century, by the superior genius of LUCA MARENZIO. This ingenious and elegant composer was
born

born at Coccaglia, in the diocese of Brescia, and the scholar of Giovanni Contini (q). His inclination leading him very early to the composition of madrigals, he cultivated that style more successfully than any of his predecessors, and the number he composed and published is prodigious (r). Of this style he was called in Italy *Il piu dolce Cigno*; and the proud antagonist of Nanino, Sebastian Raval, the Spaniard, who was editor of some of his works, styles him a *divine composer*. He was some time Maestro di Capella to Cardinal Luigi d'Este; and, according to Adami and others, caressed and patronised by many Princes and great personages, particularly the King of Poland, and Cardinal Cinthio Aldobrandini, nephew to Pope Clement VIII. Upon his return to Rome, after quitting Poland, he was admitted into the Pope's Chapel, and dying in that city, 1599, he was buried in the church of S. Lorenzo, in Lucina (s).

Our countryman, Peacham (t), speaks of his "delicious *aire* and sweet invention in madrigals;" and says, "that he excelled all other whatsoever, having published more sets than any author else; and hath not an ill song." Adding that "his first, second, and third parts of Thyrsis, *Veggio dolce il mio ben*, &c. are songs the Muses themselves might not have been ashamed to have composed." To all this I can readily subscribe, and will not dispute his stature, or the colour of his hair, when he further tells us, that "he was a little black man;" but when he asserts,

(q) This was a voluminous composer: in 1565 he published *Cantiones*, 6 *Vocum*; *Introitus & Halleluja*, 5 *Voc.* for Festivals; *Hymnos*, 4 *Vocum*; *Threnos Hieremie*, 4 *Voc.* for Passion-week; and a *Mass* in four parts.

(r) At Venice, between the years 1587 and 1601, were printed nine books of his madrigals for five voices; the two last were posthumous. I was so fortunate as to purchase a manuscript score of all these nine sets at Rome. Besides these, this author composed six books of madrigals, in six parts. Madrigals for three voices; another set for five, and still another for six voices, different from all the former. *Canzonets* for the Lute. *Motetti*, a 4, & Sa-

cras *Cantiones*, 5, 6, ac 7 *Vocibus modulandas*. All these works were first printed at Venice; and afterwards at Antwerp, and many of them in London, to English words: See *Musica Transalpina*, two books, and a collection of Italian madrigals, with English words, published in 1589, by Thomas Watson. Quadrio, To. II. P. ii. p. 324, gives a long list of his *Villanelle*, a 3 *Voci*; and Draudius, p. 1614, of his motets, a 4, for all the festivals throughout the year. Ven. 1588. *Et ejusd. Completorium & Antiphone*, a 6, 1595.

(s) Adami, *Offerv. per ben reg. il Coro Pontif.* p. 185.

(t) *Complete Gentleman*, p. 101. edit. of 1634.

that

that " he was *Organist* of the Pope's Chapel, at Rome, a good " while," he loses all credence with me: as there never yet was an Organ in the Pope's Chapel; nor is it likely, however great his musical merit may have been, that the niece of any reigning Pope could have been sent for to Poland, with so little ceremony, as he tells us, in the character of a lutenist and finger, in order to gratify the curiosity of his Polish Majesty, and the affection of Luca Marenzio. Indeed, the whole account favours of hear-say evidence and absurdity; and is so much the more incredible, as no other musical writers, who were eager to record every memorial they could procure concerning Luca Marenzio, have ventured to relate these circumstances.

There are no madrigals so agreeable to the ear, or amusing to the eye, as those of this ingenious and fertile composer. The subjects of fugue, imitation, and attack, are traits of elegant and pleasing melody; which, though they seem selected with the utmost care for the sake of the words they are to express, yet so artful are the texture and disposition of the parts, that the general harmony and effect of the whole are as complete and unembarrassed as if he had been writing in plain counterpoint, without poetry or contrivance.

The first set of his madrigals for five voices, however, seems the most elaborate; the fugues and imitations here are more ingenious and frequent than in his other works. He has, indeed, in those of later date more melody; but as yet there was too little to compensate for the want of contrivance. Whoever takes the trouble to score and examine this set, will discover marks of real genius with respect to harmony and modulation, with many attempts at melody of a more graceful kind than is to be found in the works of his contemporaries; as we may reasonably conclude this to have been one of his early productions, of nearly the middle of the sixteenth century (u).

(u) I have never met with more than one entire movement, in *triple time*, among all the works of this excellent composer; and that is in the eighth set for five voices: *La mia Clori e brunetta*. In a collection of his madrigals for six voices, published at Antwerp, 1594, some of the movements

are gay and spirited, and contain passages that continued in fashion more than a hundred years after publication, as appears by the use that Purcell and Handel have made of them; and indeed there are others which modern Italians have not disdained to adopt.

The

The words of his ninth book of five-part madrigals are all from the *Canzoniere* of Petrarca, and of these the composition seems the most free and fanciful of all his works.

Though the madrigals of the sixteenth century appear now so grave as to be scarcely distinguishable from the Music of the church, yet the masters of that period had very distinct and characteristic rules for composing in both styles. Pietro Pontio, who had himself produced many that were excellent, in giving instructions for composing madrigals, says, that “ the subjects of fugue and imitation “ in them should be short, and the notes of a quicker kind, and “ more syncopated than in Church Music; otherwise they would “ not be madrigals. The parts likewise should frequently move “ together; but the greatest care should be taken to express the “ sense of the words as exactly as musical imitation will allow, not “ only by quick and slow passages, or notes ascending and descend- “ ing occasionally, but by modulation, which, when the sentiment “ of the poet implies harshness, cruelty, pain, sorrow, or even joy, “ pleasure, or the like, will assist the expression more than single “ notes.” Here he refers to the fourth madrigal of Orlando di Lasso, Book I. for an example of the happy expression of words. Though composers were now very timid in the use of flats, sharps, and transposed keys, yet licences were taken in madrigals which were inadmissible in Music *à Capella* (x). The answers to subjects delivered were more imitations than regular replies, according to the strict laws of fugue; yet, with respect to the melody of the short passages or musical sentences which were used, and the harmony with which they are accompanied, great pains seem to have been taken in polishing both. Indeed, as this was the chief Music of the chamber, where it is probable the critics and lovers of Music attended, for neither public concerts nor operas had as yet existence, there can be no doubt but that every refinement was bestowed on this species of composition, which the ideas of musical perfection could then suggest.

(x) In the eighth madrigal of Luca Marenzio's ninth book, *a 5, Solo e pensoso*, a bold and curious composition, the upper part ascends from the key note G, to A, the

ninth above, by a series of fifteen semitones; and then descends from A to D by the same intervals.

V E N E T I A N S C H O O L.

HAVING recorded all that seems to merit attention concerning the most able musicians of the Roman School, and their works, during the sixteenth century, I shall now pass to VENICE, a city which has always patronised and encouraged Music, more, perhaps, than any other in Europe; for, from the peculiarity of its local position, having no field-sports, suburban diversions, or land near enough for the purpose of riding or walking for recreation, it was natural for them to cherish and refine such amusements as were compatible with their insulated situation.

At the head of this School the Italians themselves place ADRIAN WILLAERT, the disciple of John Mouton, and master of Zarlino. Willaert, or, as he is usually called in Italy, Adriano, was born at Bruges, in Flanders, and, during his youth, studied the Law, at Paris; if with the view of making it his profession, there must have been an early conflict between Legislation and Music, which, having a powerful advocate in his own heart, gained the cause: for, by his own account (y), he went to Rome in the time of Leo X. where he found that his motet, *Verbum bonum et suave*, was performed as the composition of Josquin; he therefore had been a composer some time before he went to Rome.

The account which Zarlino (z) gives of this motet having passed for a production of Josquin, excited my curiosity to see it; and finding it among the *Motetti della Corona*, in the British Museum, I scored it, and discovered that the predilection for a great name had operated too powerfully in favour of this composition while Josquin was imagined to be the author of it; for it is neither written with the clearness, dexterity, nor even correctness, of that wonderful contrapuntist: there is not only confusion in the parts and design, in many places, but something very harsh and unpleasing in the harmony, particularly in the closes without a sharp

(y) See Vol. II. p. 486.

(z) P. I. p. 175.

seventh, both in the key-note, and its fifth (*a*). Some of them would doubtless have been made sharp, in performance, by the fingers of those times, in compliance with a rule for sharpening ascending sevenths in minor keys, and flattening them in descending.

The list of his works, in Walther's Dictionary, though ample, is far from complete. The motet, *Verbum bonum*, just mentioned, was published at Fossombrone in 1519, forty-three years before Zarlino made him an interlocutor in his dialogue (*Ragionamente*), at Venice; and it can hardly be imagined that no others of his compositions appeared till 1542, when, we are told, that his motets for six voices were published (*b*). Indeed, for near fifty years after his name first appeared, hardly a collection of motets or madrigals was published to which he did not contribute; but the most splendid and curious work of this author, that I have seen, is preserved in the British Museum. It was published at Ferrara, 1558, by his scholar and friend, FRANCESCO VIOLA, another of the interlocutors in Zarlino's *Ragionamente*, under the title of *Musica Nova*, in three, four, five, six, and seven parts. In the dedication of this work to Alfonso d'Este, Duke of Ferrara, the editor, his Maestro di Capella, calls Adriano his master, and says, that he is strongly attached to him, not only for his wonderful abilities in Music, but integrity, learning, and the friendship with which he has long honoured him. Zarlino, in like manner, omits no opportunity of exalting the character of his master. These are honourable testimonies of regard, which seem the more worthy of being recorded, as, either from the worthlessness of the master, or ingratitude of the scholar, they are but seldom bestowed.

In the cantus part there is a wooden cut of the author: "*Adriani Willaert Flandrii Effigies.*" And indeed the compositions are of

(*a*) This motet is in six parts, *soprano*, two *contratenors*, *tenor*, *baritono*, and *bass*.

(*b*) In the *Fior de Motetti*, Lib. I. Ven. 1539, there is a *Pater-noster*, in four parts, by Adriano; and in the same year the first book of his motets, for four voices, was republished in the same city by Ant. Gardano, in folio, under the following pom-

pous title: *Famosissimi Adriani Willaert, Chori Divi Marci illustrissimæ Reipublicæ Venetiarum Magistri, Musica Quatuor Vocum (quæ vulgò Motetæ nuncupatur) noviter omni studio, ac diligentia in lucem edita.* This edition, which, we find by the title, was not the first, is preserved in the British Museum.

that

that kind for which he was most renowned, and such as the editor thought would constitute the most durable monument of his glory. In the tenor part there are many canons of very curious construction; some with two and three clefs, and a different number of flats and sharps for the several parts, which are moving in different keys at the same time; and one particularly curious, in seven parts: *Præter rerum seriem*, of which three are in strict canon of the fourth and fifth above the guide; the tenor leading off in G, the *sextus* following in C, and the *septima pars* in D, while the rest move in free fugue.

Zarlino (*c*) assigns to Adriano the invention of pieces for two or more choirs; and Piccitoni (*d*) says, that he was the first who made the bases in compositions of eight parts, move in unisons or octaves; particularly when divided into two choirs, and performed at a distance from each other, as then, they had occasion for a powerful guide. The dexterity and resources of this author, in the construction of canons, are truly wonderful, as is, indeed, his total want of melody; for it is scarcely possible to arrange musical sounds, diatonically, with less air or meaning, in the single parts. But there are many avenues through which a musician may travel to the Temple of Fame; and he that pursues the track which the learned have marked out, will perhaps not find it the most circuitous and tedious; at least Theorists, who are the most likely to record the adventures of passengers on that road, will be the readiest to give him a cast. A learned and elaborate style conceals the want of genius and invention, more than the free and fanciful productions of the present times.

Adriano lived to a great age, and filled a very high musical station (*e*). His works and scholars were very numerous; and among those to whom he communicated the principles of his art, there were several who afterwards arrived at great eminence; such as Cipriano Rore (*f*), Zarlino, and Costanzo Porta (*g*).

(*c*) P. III. p. 268.

(*d*) *Guida Armonica*.

(*e*) Maestro di Capella of St. Mark's church, at Venice.

(*f*) In the title of a book, published at Venice, 1549, there are *Fantasiae*, or *Ricer-*

cari, composed *dallo eccellentissimo* Adrian Vuigliart, and Cipriano Rore, *suo discepolo*.

(*g*) P. Martini, in his *Saggio di Contrappunto*, P. II. p. 266. calls Adrian Wil-laert the master of Costanzo Porta.

NEAPOLITAN SCHOOL.

THIS School of Counterpoint, which has been so successfully cultivated, was established in the fifteenth century, during the time of Ferdinand of Arragon, King of Naples, who reigned from 1458 to 1494, and who, according to Biancardi (*b*), was not only an encourager of learning, but learned himself. During this period Naples abounded with extraordinary men of every profession, among whom Franchinus Gafurius, John Tinctor, William Guarniero, and Bernard Yeart, cultivated both the theory and practice of Music in that city, with great diligence and success. Of Tinctor and Gafurius, an account has already been given (*i*); but as it is only in the writings of these authors, last mentioned, that the names and professional merit of the other two are recorded, time and oblivion seem to have carried them beyond the reach of further historical enquiry.

Padre Martini (*k*) places Rocco Rodio, author of *Regole di Musica*, printed at Naples, 1620, at the head of the Neapolitan School, after John Tinctor (*l*). Among theorists (*m*), during the sixteenth

(*b*) *Vite de' Re di Napoli*, &c. p. 343, 344.

(*i*) Vol. I. p. 114. Vol. II. p. 400. and in the present volume, p. 152.

(*k*) *Storia della Musica*, Tom. I. p. 447.

(*l*) It is difficult to ascertain the exact period when Rocco Rodio flourished. I have been so fortunate as to find an edition of his Precepts, to which P. Martini alludes, that was printed at Naples, 1609; but this date tells us nothing, as the work had certainly appeared much earlier in another form. Battista Olifante, the editor of this edition, seems not to give the rules of Rocco Rodio in his own words, but explanations of the doctrines and examples he had left. If this exposition of the rules established by Rocco Rodio was written by himself, he must have flourished late in the sixteenth century: as Adriano Willaert and Cipriano Rore are both mentioned in the text; and both these masters were living after the year 1550. The full title of my edition is the following:

REGOLE DI MUSICA DI ROCCO RODIO, sotto brevissime risposte ad alcuni dubij propostogli da un Cavaliere, intorno alle varie opinioni de Contrapontisti. Con la Dimostrazione di tutti i Canoni sopra il Canto-fermo, con li Contraponti doppij, e rivoltati, e loro regole. Aggiuntavi un' altra breve Dimostrazione de dodici Tuoni regolari, finti e trasportati. Et di nuovo da Don Batt. Olifante, Aggiuntivi un Trattato di Proporzioni necessario à detto Libro, e ristampato. In Napoli, MDVIII.

The rules and examples for composing canons of all kinds are remarkably short and clear, in this tract, which is so scarce, that I have never seen it in any public library or catalogue of books; and P. Martini, who mentions the work, seems never to have been in possession of it. My copy was purchased at the sale of the late Mr. Kelway's books, 1782.

(*m*) I do not confine the word *Theory* to mere speculative doctrines, concerning the generation

sixteenth century, the Neapolitans indeed had but few whose writings have reached the present times. Luigi Dentice, who published Dialogues on Music in 1553, has been already mentioned (n); and Scipione Cerreto, author of a treatise in quarto, *Della Prattica Musicale vocale & strumentale*, though it was only published at Naples in 1601, yet as the writer was then arrived at his fifty-fifth year, he may be said to have acquired his knowledge in the preceding century. This book contains much curious and useful information with respect to the Music and musicians of Naples during his time; when it appears by the copious list which he gives of favourite performers on the lute, organ, viol, guittar, trumpet, and harp, that the art was very much cultivated by professors, and cherished by the natives of that city.

Walther (o), indeed, enumerates among Neapolitan cultivators of Music, at the beginning of the sixteenth century, the celebrated Aquivivus, Duke of Atri, who, in the first book of his *Commentary on Plutarch's Treatise on Moral Virtue*, published at Naples, 1526, folio, twenty-two Chapters on Music, which he treats in the same dry and unprofitable way, with respect to the practice of harmony, as Boethius; and Marcangelo Accorso, or Accursius, (not the great civilian), who being a profound critic and philosopher, was accused by his enemies of bestowing too much time and attention on Music and Poetry (p).

generation and ratio of sounds, but call every didactic writer, who gives instructions for the composition of Music, a *Theorist*; supposing that there is a theory for harmony, or the combination of sounds, as well as for calculating their proportions.

(n) See above, p. 160.

(o) *Musicalriches Lexicon*.

(p) In a fable, called *Testudo*, which he annexed to his *Diatribes*, Accursius, addressing himself to two Princes of the House of Brandenburg, says, "You know how they exclaimed, that to play on instruments or understand Music was unworthy of a philosopher; and how much I was insulted for joining the study of Op-tics to that of the Belles Lettres, and for

"writing Italian as well as Latin verses."

*Ipsi principes, tum fidibus scire Musicen cal-
lere,*

Philosopho indignum prædicant, &c.

This author, who spent thirty-three years at the Court of Charles V. by whom he was much respected, died about the year 1540. Padre Martini, among Neapolitan writers on Music, enumerates Gio. Camillo Maffei da Solofra, of whose writing was published at Naples, in 1562, *Discorso Filosofica della Voce, e del Modo d'imparare di Cantar, di Gargania, raccolte da D. Valerio de' Paoli di Limosinano*; a book that I have never seen, nor do I very well comprehend the title.

But though we know of but few musical treatises that were produced by Neapolitans during this period, the names and celebrity of many practical musicians have been recorded, and the works of a considerable number of composers preserved, which have been scored and examined, in order to speak of them here, not from tradition, but actual perusal.

The first Secular Music in parts, after the invention of counterpoint, that I have been able to discover on the continent, is the harmony that was set to the rustic and street tunes of the kingdom of Naples; and these, under the several denominations of *Arie*, *Canzonette*, *Villotte*, and *Villanelle, alla Napolitana*, were as much in fashion all over Europe during the sixteenth century, as *Provençal* songs were in preceding times, and *Venetian ballads* have been since. Besides the old tunes which were collected, and published in four parts, others were composed, not only by the natives, but in imitation of these short familiar airs, by almost all the principal composers of other places, of which innumerable volumes were printed at Venice, Antwerp, and elsewhere, under the same titles (g).

But the most genuine, and the best that I have seen, are the *Canzone Villanesche, alla Napolitana*, by Perissone Cambio, 1551, and those of Baldassare Donato, published at Venice, in very good counterpoint of four parts, 1555. In these little national songs there is generally more humour in the words, and more air and vivacity in the melody, than in any other songs, equally ancient, that I have seen. They seem to have been sung about the streets, in parts, as the words of several imply. In one of them, a singing-master speaks, who offers to teach the Guidonian hand, or gammut, in an hour; and in one of the following, the syllables *ut, re, mi, fa, &c.* are ingeniously applied in most of the parts, to such sounds as require them, in solmifation.

(g) Of the poetry to which these tunes were sung, Crescimbeni and Quadrio give an account by the name of *Villanelle*. Adrian Willaert, Ven. 1540. Macque, 1555. Textore, 1566. Riccio, 1577. Bernardino

Draghi, 1581. Pinelli, 1585. Luca Marenzio, 1584, 1586, 1592. Ferrabosco, 1593. and Orlando di Lasso, 1594. all published *Canzonette and Villanelle, alla Napolitana*.

Villota, di Perisone, alla Napolitana.

In this last *Villanella*, and in some others of the same author, the effect of iteration has been tried; and by that expedient alone, more energy and interest seem to have been given to the melody, than I have discovered in any other of higher, or, indeed, equal antiquity. If, however, we analyse this air, we shall find no regularity of metre: the first phrase consisting of five bars and a half, a limping, incommensurate, and untoward quantity in all the arts; and yet, by the arrangement and repetition of some of the notes, the ideas of an air is impressed on the ear, though it seems wild and irregular.

Indeed, with respect to *Air*, which consists in symmetry and grace, it was long wholly unprincipled; and till the establishment of Operas, no better was perhaps produced than are to be found among the Neapolitan *Villanelle*: for during these times, even the key was seldom ascertained; and the number of bars are indeed still more regular by chance and sensibility, perhaps, than principle. The repetition of a lucky series of notes, by which they are deeper impressed on the mind of the hearer, was hardly begun to be practised so late as the sixteenth century; though in the next, the secret was not only found, but men of small genius and resources availed themselves of it to a disgusting degree.

Besides composers and compilers of *Villanelle* (r), Gioan Leonardo Primavera, called *dell' Arpa*, published at Naples, 1570, three Books of Songs, of which he was author both of the Poetry and Music (s); and Luzzasco Luzzaschi, one of the four whom Galilei honoured with the name of musician (t), published at Naples, 1576, Madrigals, that were much admired throughout Italy, where this author's fame as an organist was higher than that of any of his contemporaries, except Claudio Merula. Antonio Cieco Valente, likewise, published *Versi Spirituali sopra tutte le Note, con diversi Capricci per sonar negli Organi*. Nap. 1580.

But no Neapolitan composer, of this high period, is mentioned with such unlimited praise, as DON CARLO GESUALDO, Prince of

(r) Draudius, *Bibl. Claff.* tells us, that Giul. Policreto, Ant. Scandello, Pierantonio Bianchi, Ascanio Trombetta, and Regolo Vicoli, authors of Neapolitan songs, published them in six volumes, at Venice,

1571.

(s) This author is one of the musicians celebrated by Luigi Dentice. See above, p. 160.

(t) *Dial. della Mus. Ant. e Mod.*

VENOSA; it will be necessary, therefore, to stop and pay our respects to the abilities of this celebrated and illustrious Dilettante, in consideration of the honour he has done the art of which we are tracing the history.

This Prince, whose fame has been extended by his musical productions more than by his high rank, though this rank will be found reciprocally to have added lustre to the compositions, was nephew to Cardinal Alfonso Gesualdo, Archbishop of Naples, and had his title from the place which gave birth to Horace (*u*), the *Venusium* of the ancients. Pomponius Nenna, a voluminous and celebrated composer of madrigals, had the honour to instruct him in Music. His productions consist of six sets of madrigals for five voices, and one for six. The principal editor of his works was Simone Molinaro, Maestro di Capella at Genoa, who, in 1585, published the first five books in separate parts; and, in 1613, the same madrigals, with the addition of a sixth book, in score (*x*).

The numerous editions of these madrigals in different parts of Europe, and the eulogiums bestowed on the author by persons who rank high in Literature, as well as Music, made me extremely curious to see and examine them. Gerard Vossius (*y*), Bianconi (*z*), Bapt. Doni (*a*), Taffoni (*b*), and many others, speak of him as the greatest composer of modern times; as one who, quitting the beaten track of other musicians, had discovered new melodies, new measures, new harmonies, and new modulation; so that singers, and

(*x*) *Partitura delli sei Libri de' Madrigali a cinque Voci, dell' illustrissimo & eccellentissimo Principe di Venosa, D. Carlo Gesualdo, Fatica di Simone Molinaro, Maestro di Capella nel Duomo di Genova.*

The first and second books were re-published, in parts, at Venice, in 1603, and dedicated to the author by Scipione Stella, a Neapolitan monk, and himself likewise a composer of madrigals; both the dedications are dated 1594. An edition of the third book was published at Venice, 1619, by Gardano. The fourth book was also re-printed at the same place, and dedicated

to the author, by Hettorre Gesualdo, 1604; and a third impression of the fifth book, with a new edition of the sixth, were both published at Venice, by Gardano, 1616. Copies of all these, except the fifth book, are preserved in the collection of Music bequeathed to Christ Church, Oxon, by Dr. Aldrich, and Goodson, with the use of which I have long been indulged, by the liberal spirit of the Dean and Canons.

players on instruments, despising all other Music, were only pleased with that of this Prince (c).

Taffoni tells us, that James I. King of Scotland, had not only composed Sacred Music, but invented a new species of plaintive melody, different from all others; "in which he has been imitated by the Prince of Venosa, who, in our times, has embellished Music with many admirable inventions (d)." This assertion greatly increased my desire to examine works in which so many excellencies were concentrated; particularly as I had long been extremely desirous of tracing the peculiarities of the national melodies of Scotland, from a higher source than David Rizzio. But, in a very attentive perusal of all the several parts of the whole six books of the Prince of Venosa's madrigals, I was utterly unable to discover the least similitude or imitation of Caledonian airs in any one of them; which, so far from Scots melodies, seem to contain no melodies at all; nor, when scored, can we discover the least regularity of design, phraseology, rhythm, or, indeed, any thing remarkable in these madrigals, except unprincipled modulation, and the perpetual embarrassments and inexperience of an Amateur, in the arrangement and filling up of the parts.

The passage in Taffoni, which has so often been cited by Scots writers, seems to imply, not only that James, King of Scotland, had invented a new species of melody, but that his melody had been *imitated* by the Prince of Venosa; at least, this is the sense in which the passage has been understood by the Scots, and indeed by my-

(c) Hic enim Rhythmis in musicam revocatis, eos, tum ad cantum, tum ad sonum, modulos adhibuit, ut cæteri omnes Musici ei primas libenter detulerint. *Ejusque modos cantores, ac fidicines omnes, reliquis post habitis, ubique avidè complectuntur.* Blancanus.

Opinions of ancient things are more frequently taken upon trust than formed upon real examination: thus Rousseau, who had too much taste and knowledge to like such compositions had he heard or seen them, tell us, after Vossius and Blanchini, that "the elegant and learned Madrigals of the Prince of Venosa, were admired by all the Masters, and sung by all the Ladies of his

time." *DiEt. de Mus. Art. Madrig.*

(d) Noi ancora possiamo connumerar trà nostri Iacopo Re di Scozia, che non pur cose Sacre compose in canto, ma trovò da se stesso una nuova musica, lamentabile, e mesta, differente da tutte l'altre. Nel che poi è stato imitato da Carlo Gesualdo, Principe di Venosa, che in questa nostra età ha illustrata anch' egli la Musica con nuove mirabili inventioni. Lib. X. cap. xxiii.

Angelo Berardi, in his *Miscellanea Musicale*, gives Taffoni's opinion on this subject, as his own, without knowing whether it was well founded.

self, till, on finding no kind of similarity between the national tunes of North Britain and the melodies of the Prince of Venosa, I examined the passage anew, with more attention; when it appeared to me as if Tassoni's words did not imply that the Prince of Venosa had *adopted* or *imitated* the melodies of King James; but that these princely Dilettanti were *equally* cultivators, and *inventors*, of Music.

This illustrious Dilettante seems to merit as little praise on account of the expression of words, for which he has been celebrated by Doni, as for his counterpoint (*e*); for the syllables are constantly made long or short, just as it best suited his melody; and in the repetition of words, we frequently see the same syllable long in one bar, and short in another, or the contrary; by which it is manifest that their just accentuation was never thought of.

The remarks of Tassoni, if he meant otherwise, certainly must have been hazarded either from conjecture or report; as is but too frequently practised by men of letters, when they become musical critics, without either industry or science sufficient to verify their assertions.

The Prince of Venosa was perpetually straining at new expression and modulation, but seldom succeeded to the satisfaction of posterity, however dazzled his contemporaries may have been by his rank, and the character he bore among the learned, who so frequently get their musical information from tradition, that whether they praise or censure, it is usually *sans connoissance de cause*.

Dilettanti usually decide in the same summary way, with an additional prejudice in favour of their own little knowledge, and a disposition to censure whatever they are unable to acquire, be it science or execution.

Cicero has long since said, that "it is not with Philosophy and Science, as with other arts; for what can a man say of Geometry

(*e*) *Il Principe Venosa con l'espressione di Melodia poteva vestire qualsivoglia Concetto.*

Trattato della Musica scenica, p. I. cap. xvii.

“ or Music, who has never studied them? He must either hold his tongue, or talk nonsense (*f*).”

With respect to the *excellencies* which have been so liberally bestowed on this author, who died in 1614, they are all disputable, and such as, by a careful examination of his works, he seemed by no means entitled to. They have lately been said to consist in “ fine contrivance, original harmony, and the *sweetest modulation conceivable*.” As to *contrivance*, it must be owned that much has been attempted by this Prince; but he is so far from being happy in this particular, that his points of imitation are generally unmanageable, and brought in so indiscriminately on concords and discords, and on accented and unaccented parts of a bar, that, when performed, there is more confusion in the general effect than in the Music of any other composer of madrigals with whose works I am acquainted (*g*). His *original harmony*, after scoring a great part of his madrigals, particularly those that have been the most celebrated, is difficult to discover; for had there been any warrantable combinations of sounds that Palestrina, Luca Marenzio, and many of his predecessors, had not used before him, in figuring the bases, they would have appeared (*b*). And as to his *modulation*, it is so far from being the *sweetest conceivable*, that, to me, it seems forced, affected, and disgusting (*i*).

The

(*f*) *Non est enim Philosophia similis artium reliquarum. Nam quid faciet in Geometria, qui non didicerit? Quid in musicis? Aut taceat oportebit, aut ne sanus quidem judicetur.* Cic. de Orat. iii. p. 188. Vol. I. Edit. Lambin.

(*g*) Battista Doni, another Dilettante, says, “ that he never aimed at Canons, or such Sophistry.” Appen. Tom. I. p. 177. He is, however, always struggling at fugue and imitation.

(*b*) The frequent use of the sharp third and minor sixth, if it be reckoned among his harmonies, does little honour to the delicacy of his ear; for even Purcell and Handel, with all their own weight, and the due reverence of the public for their superior genius and abilities, were not imitated in the use of this combination. It is, indeed, admitted by

Handel in his Organ Fugues, more through necessity than choice, in order to bring in an answer, or make one subject serve as an accompaniment to another; but it has always the effect of a wrong note in the performance. Padre Martini gently censures this harmony in Palestrina, and Angleria says it is *buono per autorità, e non per regola*; it is, however, so detestable to my ears, that no authority, rule, or effect, can justify its use. In Opera songs, indeed, it is tolerated in notes of taste, appoggiaturas, and passages of passion; but in church music, and regular counterpoint, to admit it in the texture of the fundamental harmony, can never be recommended to students in composition, who wish to please the natural and uncorrupted ear of the public.

(*i*) Whenever he attempts chromatic, the base is as unprincipled as unpleasing. In

The following madrigal, being the seventeenth of his sixth book, is presented to the musical reader as a specimen of his style, and harsh, crude, and licentious modulation; in which, the beginning a composition in A minor, with the chord of C sharp, with a sharp third, is neither consonant to the present laws of *modulation*, nor to those of the ecclesiastical tones; to which, as keys were not settled and determined on the fixed principles of major and minor, in the time of Venosa, composers chiefly adhered. But a more offensive licence is taken in the second chord of this madrigal than in the first; for it is not only repugnant to every rule of transition at present established, but extremely shocking and disgusting to the ear, to go from one chord to another in which there is no *relation*, real or imaginary; and which is composed of sounds wholly extraneous and foreign to any key to which the first chord belongs.

I have bestowed more remarks on this Prince of Musicians, and more time in the examination of his works than they perhaps now deserve, in order to furnish my readers with what seems, to my comprehension, a truer idea of their worth than that which partiality and ignorance have hitherto given.

the key of G, with a flat third, he begins in

the following manner: $G \ E \ D \ G \ F \sharp \ F \sharp$

$B \sharp \ B \ E \ C \sharp$. And in the key of E minor,

we have this passage in the base: $C \ A \flat$

$b \ 7 \ 6 \flat \ 4 \ 6$

$\flat \ 6 \ b \ 4 \flat \ 4 \ \sharp$

$\flat \ 6 \ b \ 4 \flat \ 4 \ \sharp$ E, lib. iv. p. 3.

Through the whole book he seems to be *trying confusions*; for in the same key, p. 11.

we have $D \ E \flat \ D \ D \flat \ C - B \ G \sharp \ E$. P. 13.

in F natural, at the end of the madrigal,

$E \ C \sharp \ F \sharp \ D \ C \ F \sharp$ and p. 14. in a move-

ment that begins and ends in $G \sharp$, we have

$G \ E \flat \ E \sharp \ F \ B \flat \ D \flat \ D \sharp \ G \sharp$!! Most of these sounds, it must be observed, are fundamental, and accompanied with common chords. But such extraneous modulation, as it was neither learned nor pleasing, was never adopted by other Contrapuntists. It is not every one who ventures to violate established rules, that has knowledge and genius sufficient to find either a series or combination of sounds which has escaped all other Composers, and which, by the pleasure it affords the ear, is above the reach of censure. New modulation, when guided by science and a nice ear, is always welcome, and certain in its effect; but when it only consists of such licentious and offensive deviations from rule, as have been constantly rejected by the sense and intellect of great Professors, it can only be applauded by ignorance, depravity, or affectation.

MADRIGAL,

Madrigal .

By the Prince of Venofa. 223

THE LOMBARD SCHOOL.

The LOMBARD SCHOOL would furnish an ample list of eminent musicians during the sixteenth century, whose compositions are still extant, if the limits of my plan would afford room for specimens; but as it is difficult, at this distance of time, not only to furnish criteria of the difference between one composer and another of the same country, but between school and school of different countries, I shall content myself with affording a niche in this part of my work to two or three of the principal founders of this class of contrapuntists. Padre Martini very justly places at the head of the Lombard School, Father COSTANZO PORTA, of Cremona, a scholar of Willaert, and fellow-student with Zarlino. He was at first Maestro di Capella at Padua, next at Osimo, in the March of Ancona; then at Ravenna; and lastly, at Loretto; where he died in 1601. He was author of eighteen different works for the church, full of elaborate and curious compositions, which have been always sought and admired by masters, and collectors of learned Music. This author seems not only to have vanquished all the difficult contrivances for which John Okenheim, Jusquin del Prato, and Adrian Willaert, from whose school he sprung, were celebrated, but considerably augmented their number: for, as orators, lawyers, and commentators have the art of twisting and subverting words to any meaning that favours their cause or hypothesis, so Costanzo Porta had equal power over any series of musical notes, in a canon or fugue; which he could not only work in *recte et retro*, but invert, augment, diminish, divide, or subdivide, at his pleasure. In this faculty he very much resembled our Tallis, his cotemporary. He began to flourish towards the latter end of the reign of Henry VIII. as did Tallis. According to Draudius, his five-part motets were published at Venice in 1546; and between that period and 1599, the rest of his works were published, either by himself or scholars, of whom he had a great number; particularly Lodovico Balbo, who flourished about 1578, and Giacomo Antonio Piccioli, 1588, both voluminous composers, in their master's artificial and elaborate style, and consequently great canonists.

The composition of Costanzo Porta, inserted on the following plates, is in seven parts, and was taken from the author's Fifty-two Motets, for five, six, seven, and eight voices, printed in 1580, while he was Maestro di Capella at the Holy Church at Loretto; it consists of four parts in canon, two *per moto retto*, and two *per moto contrario*, while the other three are in free fugue. Though long, it is so curious, and constructed with so much art, that it is exhibited as an example of that scientific species of writing, by which alone the abilities of a contrapuntist were measured in the sixteenth century, when there were no musical dramas, or full pieces for instruments, and but few single songs, or solos of any kind, to exercise genius and invention. Masses and motets for the church, and madrigals for the chamber, in three, four, five, six, and more parts, comprised almost all the Music that was then composed.

Besides Costanzo Porta, and his scholars, the Lombard School can boast of many able and distinguished composers during the latter end of the sixteenth century; among whom are Giuseppe Caimo, Gio. Giacomo Gastoldi, Giuseppe Biffi, and Gio. Paolo Cima, all voluminous composers at Milan: with Pietro Pontio, of Parma, already mentioned; Orazio Vecchi, of Modena; and Claudio Monteverde, of Cremona.

GASTOLDI, sometimes called *Castaldi*, born at Caravaggio, was author of thirty musical works; the titles and dates of which may be seen in Draudius and Walther. Of these I have only seen his *Ballads*, printed at Antwerp, 1596, under the following title: *Balletti a 5. co i versi per cantare, sonare, e ballare; con una Mascherata de Cacciatori à 6. e un Concerto de' Pastori, à 8.* This puts the derivation of our word *Ballad* out of all doubt, which originally meant a song that was sung and danced at the same time (*k*). The tunes of Gastoldi are all very lively, and more graceful than any I have seen before the cultivation of melody for the stage. The first edition of these ballads was published at Venice, 1591; many of them are called *Fa las*, under which title our Morley, four years after, published short airs, in five parts: so that it seems as if the name of *Fa la*, silly as it is, was not originally English. For two *Fa las* of Castoldi, see the plates p. 233.

(*k*) See Vol. II. p. 343.

The counterpoint, as well as the melody of these Ballads, is excellent; except at the places marked with a cross; where the Chord of F Natural immediately succeeding the Chord of G, is too unrelative and sudden a Modulation for modern ears.

Concerning the compositions of BIFFI and CIMA, though numerous, and still preserved in many collections, I am unable to speak, having seen none of them in score; however, not only of Pietro Pontio, of whom a specimen has already been given (l), but of Orazio Vecchi and Monteverde I have scored many. These two last musicians are deserving of particular notice, not only on account of their numerous compositions for the church and chamber, but for their early attempts at Dramatic Music. In this last capacity, their abilities will be considered hereafter; at present, we shall only speak of their other productions.

ORAZIO VECCHI, born at Milan, and many years Maestro di Cappella at Mantua, obtained a great reputation, not only as an able musician, but poet. His numerous canzonets for three and four voices, published at Milan and Venice, from 1580 to 1613, were re-printed and sung all over Europe. Our countryman Peacham, who had received instructions in Music from this composer, during his residence in Italy, speaks of him in the following manner: "I bring you now mine own master, Horatio Vecchi, of Modena, who, beside goodness of aire, was most pleasing of all other for his concept and variety, wherewith all his works are singularly beautified, as well his madrigals of five and six parts, as those his canzonets, printed at Norimberge (m)." He then instances and points out the beauties of several of his compositions, that were most in favour during that time. Besides secular Music, Vecchi composed two books of *Sacred Songs*, in five, six, seven, and eight parts; Masses of six and eight voices; and four-part Lamentations (n).

CLAUDIO MONTEVERDE, of Cremona, was one of the most eminent composers of the period now under consideration. He first distinguished himself as a performer on the Tenor Viol; and

(l) Page 177.

(m) *Complete Gentleman*, p. 102.

(n) *Sacrarum Cantionum*, Ven. 1597, *Messe*, 1607, and *Lamentationi*, 1608. Milton is said, by his nephew Phillips, in the life which he prefixed to the English translation of his State Letters, to have collected, during

his travels, a chest or two of choice music-books of the best Masters of Italy at that time, but particularly of Luca Marenzio, Monteverde, Orazio Vecchi, &c. Draudius and Walther, after some Italian writers, speak of *Orfeo Vecchi* as a composer cotemporary with Orazio.

being

being taken into the service of the Duke of Mantua, applied himself to the study of composition under the direction of Marcantonio Ingegneri, of Cremona, Maestro di Capella of that court, and a considerable composer for the church. Soon after he went to Venice, where the republic appointed him Maestro of St. Mark's church, a place which has been always filled by professors of great abilities. Here, in 1582, he published Madrigals for three, four, and five voices, in the style of the times; but his courage increasing with experience, in his subsequent productions he dared to violate many rules of counterpoint, which, having been long established, were held sacred by orthodox professors. He had, therefore, many opponents, who treated him as an ignorant corrupter of the art. Among these, the principal was Gio. Maria Artusi, of Bologna, who, in the first part of his tract *on the Imperfection of Modern Music*, published in 1600, as well as in the second, which appeared in 1603, inveighed with great asperity against Monteverde. Musicians entered the lists on both sides, and the war became general. Monteverde defended himself in prefaces and letters prefixed to his works; but his best defence was the revolution he brought about in counterpoint; for his licences pleasing the public ear, were soon adopted not only by Dilettante, but professors.

As the innovations of Monteverde, form a memorable epoch in the history of the art, it seems necessary to acquaint the musical reader in what they consisted. The laws of harmony, like those of tragedy, comedy, and epic poetry, when once established check invention, and frequently impel men of real genius to become imitators. Unluckily musicians had not such perfect models before them, as antiquity has furnished to poets in the dramatic works of Sophocles, Euripides, and Terence, or the epic poems of Homer and Virgil. In the infancy of musical composition, men saw but a little way into the latent resources of harmonic combinations; rules were formed upon few and narrow principles, derived from monotonous and insipid compositions, when timidity was feeling its way in the dark, and every deviation from the practice of the first contrapuntists was thought licentious. However, men were too
great

great friends to the pleasure of the ear, not to encourage such happy licences as those with which Monteverde was charged; and since that time, every fortunate breach of an *old rule* seems to be regarded as the establishment of a *new*; by which means, the code is so enlarged that we may now almost pronounce every thing to be allowable in a musical composition, that does not offend cultivated ears.

Monteverde was the first who used double discords, such as the $\frac{9}{4}$, $\frac{9}{7}$, and $\frac{7}{2}$, as well as the flat fifth, and the seventh unprepared; and as he was possessed of more genius and science than the Prince of Venosa, his innovations were not merely praised, and then avoided, but abused, and adopted by other composers.

MONTEVERDE'S *New Discords, in five Parts.*

But it was not only by the use of these discords that he improved music, for by quitting ecclesiastical modulation in his secular productions, he determined the key of each movement, smoothed and phrased the melody, and made all his parts sing in a more natural and flowing manner than had been done by any of his predecessors (o). In the first set of Monteverde's madrigals the composition is not only correct, and simple, but so dry and fanciless, as to threaten no attempts at such new harmonies and effects, as would bring about a revolution in the art. And it seems to have been by design, and in his dramatic experiments at the expression of words, that he ventured to violate ancient rules, and militate against prejudice and pedantry: for neither his Church Music, nor the two first books of his madrigals, contain any licences that would offend or surprise orthodox ears, even in the fifteenth century. But in his fifth and last book of madrigals, almost every species of discord and modulation is hazarded, for the use of which the boldest composers of modern times have been often thought licentious.

Of his merit, as a dramatic composer, we shall have occasion to speak elsewhere: but something so free, facile, and similar to music of much later times appears through all the trammels of fugue and contrivance in the melody, harmony, and modulation of his madrigals, that I cannot refuse a place to one of them here.

(o) Monteverde, in composing for the church, adhered religiously to the tonal laws of ancient practice, *della prima pratica*, as appears by an *Agnus Dei* from his Mass, called *In illo tempore*, for six voices, inserted by Padre Martini in the second part of his *Saggio di Contrap.* p. 242. which is constructed in strict fugue, with great purity of harmony and modulation. And as it was in his ma-

drigals and operas that he ventured to violate such established rules of counterpoint as precluded variety, energy, pathos, and every bold expression of words, which has since been so necessary in the picturesque and impassioned scenes of Dramatic Music; Padre Martini calls these licences *la seconda pratica*, differing in many particulars from that of all the masters who preceded Monteverde.

MADRIGAL

MADRIGAL, by Claudio Monteverde.

237

dal Libro 3. a 5 Voce.

The musical score is written for five voices, represented by five staves. The notation includes various musical symbols such as clefs, time signatures, and note values. The lyrics are in Italian and are written below the corresponding staves. The score is divided into three systems, each containing five staves. The lyrics are as follows:

System 1:

- Staff 1: Stracciam pur il co re ra gion e ben in
- Staff 2: Stracciam pur il co re ra gion e ben in

B O L O G N A S C H O O L.

The works of but few practical musicians of this School are preserved or recorded during the sixteenth century, though in the next, the masters of the cathedral of S. Petronio, and other professors of the city of BOLOGNA, were at least equal to those of the first class in any other part of Europe.

An account has already been given (*p*) of a musical controversy, carried on in the beginning of the sixteenth century, between Franchinus and Spataro, of Bologna, a disciple of Bartholomeo Ramis, a Spaniard, and professor of Music in the same city where Spataro published a tract, in 1521, called *Errori di Franchino Gafurio*. In the same year was born, at Bologna, *Il Cavaliere Ercole Bottrigari*, a man of rank, fortune, and erudition, who seems to have spent his whole life, which extended to eighty-eight years, in the study of Music, and in musical controversy. He was author of a great number of tracts, chiefly polemical; some of which were printed (*q*), but many, consisting of translations and commentaries of ancient musical authors, with annotations on those of his own time, still remain in manuscript; and of these Padre Martini is in possession of the greatest part.

Artusi, an excellent musical critic (*r*), and a native of Bologna, contributed considerably to the progress of the art by his several writings; and ANDREA ROTA, of the same city, who published five-part madrigals, in 1579, appears to have been an admirable contrapuntist. Padre Martini (*s*) has exhibited a movement of his composition, *Da pacem Domine*, in six parts, which does honour to his abilities in writing *à Capella*, in which style he seems to have been equal to any of the masters of this learned period. The subject is a fragment of the ancient Antiphona, to which these words used to be sung, and upon which the first Contralto and Tenor move in perpetual canon; the Soprano, second Contralto, and Base, in

(*p*) See above, p. 155.

free, but close fugue; while the Baritono, after resting nine bars, sustains the whole canto fermo, from the beginning to the end. This composition is constructed with great art and contrivance, and is truly grave, solemn, and reverential.

FLORENTINE SCHOOL.

Though neither the city of Florence, nor any part of Tuscany, is included among the Schools into which the Music of Italy is usually classed, yet this, as well as every other art, has had great obligations to the activity, ingenuity, and talents of the inhabitants of this Dutchy; for it is well known that the Florentines, under the auspices of the Medici Family, at a time when almost all the rest of Europe was immersed in barbarism, were the first to polish their own language, revive the ancient good taste of their ancestors, the Etruscans, in all the fine arts, and to disseminate their discoveries and improvements, not only through the rest of Italy, but almost every civilized part of the world.

The reader has been already informed (*t*), that the oldest melodies, I was able to find in Italy to Italian words, were in a collection of *Laudi Spirituali*, or Sacred Songs of Praise, produced and preserved at Florence; for the performance of which, a society, which still subsists, was formed in that city so early as the year 1310. It has likewise been shewn (*u*), how much Music was cultivated, encouraged, and practised there in the time of Boccaccio; and the extraordinary abilities of two Florentine Musicians in performing upon the organ, at the latter end of the same century, and beginning of the next, have already been recorded (*x*).

These, if there were no other to be found, would be sufficient proofs that the Florentines could not justly be anathematized by the other Italian States, like the Cynæthians, in Greece (*y*), for being ἀμαρτοι; as there is no period of their history, since the inventions

(*t*) Vol. II. p. 325.

of Francesco Cieco, the blind organist, and Antonio Landino, *dagl' organi*.

(*y*) See Vol I. p. 174.

of their countryman Guido d'Arezzo, in which they have not contributed their share towards the cultivation and performance of good Music.

We have seen (z) in how many parts the *Canti Carnaschialeschi*, or Carnival Songs, were sung through the streets of Florence, in the time of Lorenza il Magnifico; and to the history of Music there, during that gay and happy period, may be added the favour of Antonio Squarcialuppi, organist of the Duomo at Florence, not only with that Prince (a), but with his fellow-citizens; who, for his great musical talents, erected a monument to his memory, in their cathedral, of which he was organist, which still subsists, with an inscription which I copied myself on the spot, in the year 1770 (b).

The learned and eloquent Politian, tutor to Leo X. and the other children of Lorenzo il Magnifico, who left among his works a discourse on Music, is said to have died in the act of playing on the Lute, 1494. We shall have farther occasion to speak of this illustrious Tuscan, in tracing the origin of the Musical Drama in Italy.

FRANCESCO CORTECCIA, a celebrated organist and composer, was Maestro di Capella to the grand Duke Cosmo II. thirty years. In his youth he published, at Venice, a set of Madrigals for four voices; afterwards Motets, and lastly *Responsoria et Lectiones Hebdomadae Sanctae*. I scored one of his motets, but found it dry and uninteresting, both in fancy and contrivance: he died in 1581. Signor Betinelli, who, in his *Sorgimento d'Italia*, has lately celebrated his abilities, in all probability took his character of him from tradition. He was succeeded at the court of Florence by the celebrated ALESSANDRO STRIGGIO, a lutenist and voluminous composer, whom our Morley frequently mentions and cites in his *Introduction*. He is much commended by Garzoni in his *Piazza Universale*, and by the historians of Italian poetry, Crescimbeni and Quadrio, as one

(z) Vol. II. p. 518.

(a) See his life by Niccolo Valore.

(b) *Multum profecto debet Musica Antonio Squarcialupo, organista. Is enim ita gratiam conjunxit, ut quartam sibi viderentur Charites*

of the earliest composers of Music in Italy for the stage (c). In the preface to *Descrizione degl' intermedii fatti nel pallazzo del gran Duca Cosimo, per onorare la presenza della serenissima altezza dello eccellentissimo Arciduca d' Austria, l' anno 1569*; it is said that the music to these Interludes, which seem to have been only madrigals, was set by Alessandro Striggio, Nobilissimo Gentiluomo Mantovano (d).

His madrigals, in six parts, were published at Venice, 1566. A copy of these is preserved in the Christ-church collection, at Oxford. Some of them, however, were printed seven years earlier in the *2do Libro de le Muse*, from which I scored several in the British Museum; but I did not find them remarkable either for genius or science. There seems an attempt at singularity, in accelerating the parts, but clearness is wanting in the harmony, and accent in the melody; the subjects of imitation were neither new nor striking at the time they were composed; and the modulation is almost wholly confined to two keys. Compared with the best compositions of his time, they would only be allowed, perhaps, to be good for a Dilettante.

VINCENZO GALILEI, of whom we have already spoken (e), was a Florentine: it is, therefore, indisputable that Florence was not deficient in men of abilities and talents, either in the theory or practice of Music, during the time that the inhabitants of the other parts of Italy began to distinguish themselves in the art.

But besides the works of such musicians as have been classed under the several Schools of Italy, there are many excellent productions of this high period, preserved in the collections of the curious, by Italian composers, the particular place of whose birth and residence has not been recorded: among these there is one who, for his genius and abilities, well deserves a place in every history of Music: this is CONSTANTIUS FESTA, of whose composition the musical reader will be enabled to judge, by the following motet and madrigal.

(c) See Quadrio, Tom. V. p. 503, for account of his *Intermezzi*.

(a)
 The ancient
 partiality
 for the 4th
 prevails in
 this Madri -
 gal.

There is a motet, by this ancient master, inserted in the fourth book of *Motetti della Corona*, which was printed so early as 1519, ten years before Palestrina was born.

In the third book of Arkadelt's madrigals, printed at Venice, 1541, there are also seven compositions by Costanzo Festa, in which more rhythm, grace, and facility appear, than in any production of his cotemporaries, that I have seen. Indeed, he seems to have been the most able contrapuntist of Italy during this early period; and if Palestrina and Constantius Porta be excepted, of any period, anterior to that of Carissimi. The preceding motet, for three voices, printed in 1543, is, in the church style of the times, a model of elegance, simplicity, and pure harmony; the subjects of imitation are as modern, and the parts sing as well, as if it was a production of the present century. I could not resist the pleasure of scoring his whole first book of three-part madrigals, from the second edition printed at Venice, 1559; for I was astonished, as well as delighted, to find compositions so much more clear, regular, phrased, and unembarrassed, than I expected.

And now, having traced the progress which the inhabitants of the several States of Italy had made in Music, as far as the end of the sixteenth century; we shall quit, for the present, this elegant, ingenious, and enthusiastic people, and endeavour to describe the improvements which the art received, about the same time, in other parts of Europe.

C H A P. III.

Of the Progress of Music in Germany during the Sixteenth Century.

THE inhabitants of this extensive empire have so long made Music a part of general education (*f*), and able professors of all countries have been so much patronized by its princes, whose passion for the art, and establishments in its favour, have at all times powerfully stimulated diligence in its votaries; that they are, at least, entitled to the second place among its most successful cultivators. Indeed, their instrumental Music seems at present superior to that of every other country in Europe. But though treatises innumerable, written during the sixteenth century on the subject of Music, are preserved, yet it would be extremely difficult to furnish many specimens of composition equally ancient, though much was produced; for the Germans seem as fickle in their musical taste as the Italians, and have been still more willing to consign their old authors to untimely neglect and oblivion. However, it seems the duty of an historian to record, at least, the names of artists who were once dear to their contemporaries; and, in spite of the ingratitude of posterity, to endeavour to renovate a sense of their virtues and talents (*g*).

Specimens of composition by Henry Isaac, a very able German contrapuntist of the fifteenth century, before the Italians had distinguished themselves in the art, have been given in the second volume (*b*). Qaudrio (*i*) says, that he was Maestro di Capella of the church of San Giovanni, at Florence, and the first who, in different ballad-airs, set the songs of Lorenzo de' Medici, in three parts, for a processional masquerade. He flourished about 1475. And we are told that *Bernhard*, a German, so early as the year 1470, invented pedals for the organ, at Venice; a discovery which reflects

(*f*) See *The Present State of Music in Germany*.

(*g*) In the Elector of Bavaria's Collection of Music during the sixteenth century, the most complete in Europe, among innumer-

able Italian composers, there are many works preserved, by German masters, of that period.

(*b*) See p. 518, et seq.

(*i*) Tom. II. p. 321.

great honour upon the organists of their country, as it implies ideas of harmony and effects beyond the power of human hands; in the use of which, the difficulties had been so entirely vanquished, as to allow the player to superadd to his performance, those of the feet. The fact is not only related by German writers, but by Sabellicus (*k*), an Italian, Bernhard's cotemporary, who resided at Venice at the time of the invention.

GEO. REISCHUS, of Friburg, author of a work in twelve books, comprising a distinct treatise on all the seven liberal sciences, in Latin, called *Margarita Philosophica* (*l*), first published in 1503, in which one of the books is appropriated to Music, is the most ancient German writer on the subject that I have been able to find. His book, however, though frequently cited by Italians, contains no instructions for the practice of harmony, as the author, though posterior to Gaffurio, chiefly follows Boethius.

MICHAEL ROSWICK, in 1519, published likewise at Leipzig, *Compendium Musicæ*, a Musical Compendium, which was too short and superficial to afford much assistance to the student. However, the next year, JOHN GALLICULUS, who was cotemporary with Luther, and is said, by Schamelius and Walther, to have composed several of the Lutheran hymn and psalm-tunes, published, at Leipzig, a more ample treatise, which he reprinted in 1548 and in 1553, addressed to Geo. Rhaw, the learned bookseller and musician of Wittemburg, of whom we shall soon have occasion to speak farther. This tract, which has for title *Libellus de Compositione Cantus*, contains twelve chapters, which are chiefly employed on counterpoint (*m*).

But the most general and extensive treatise on practical Music that was produced in Germany, after the writings of Gaffurio had appeared, was the Micrologus of ANDREAS ORNITHOPARCHUS,

(*k*) Sabellicus died in 1507, at 70 years of age; it is in the 8th book of his *Enneads*, or History of the World, that the circumstance is related.

(*l*) *The Philosophical Pearl*.

(*m*) There is another *Galliculus* (Michael), a Cistercian Monk of Zell, who, in

1520, published a short treatise *de vero psallendi modo*, to which Ornithoparchus refers his readers who are curious concerning the ecclesiastical chants. This book is in Ant. Wood's Coll. in the Ashmol. Museum, Oxford.

Master of Arts in the University of Meyning, which was published at Cologne, 1535; though Walther thinks that was not the first edition. The author chiefly cites John Tinctor, Franchinus, and the tract written by our countryman John Cotton, whom he calls Pope John XXII. His treatise, though the best of the time, seems too meagre and succinct to have been of great use to the students of such Music as was then practised. It was, however, translated into English, in 1609, seventy years after its first publication, by our countryman John Douland, the celebrated lutenist; a labour which he might have well spared himself, as Morley's *Introduction*, which was so much more full and satisfactory, precluded all want of such a work as that of Ornithoparchus, in England.

Between the publication of this work and the *Dodecachordon* of Glareanus, which was only twelve years, five or six more musical treatises appeared in Germany: such as *Opusculum Rerum Musicalium*, by JOHN FROSCHIUS, Strasburg, 1535. *Enchiridion utriusque Musicae practicae*, for the use of children, by GEO. RHAW, Wittenberg, 1536 (n). *De Articanendi*, by SEBALDUS HEYDEN, Nuremberg, 1537. This treatise, which extends not to composition, pretends to teach nothing more than the mere characters and rudiments of reading Music. *Compendium Musices*, by LAMPADIUS, a chanter of the church at Luneberg, 1537, 12mo. This little work, which is in dialogue, and designed for incipients, has, at the end, a few short rules for composition, with examples. *Harmoniae Poeticae*, by PAUL HOFHAIMER, Nuremberg, 1539. The second part contains a notation of all the rhythms and measures of the feet of Latin verse (o). *Musurgia, seu Praxis Musicae*, by OTTOMARUS LUSCINIUS, a Benedictine Monk, born at Strasburg, but an inhabitant of Augsberg. This work, which was published in 1542,

(n) Walther speaks of an edition of this useful little work, in 1531. It contains all that was necessary for beginners, till they proceeded to the study of composition, concerning which the author is wholly silent. Glareanus, p. 220, has given a specimen of his counterpoint.

(o) The two last-mentioned tracts are likewise among Anthony Wood's printed

books, in the Ashmol. Museum. Paul Hofhaimer is celebrated by Luscinius not only as an admirable performer on the organ, on whom the Emperor Maximilian conferred great honours, but as a composer of the very first class, whose productions, which were not only learned and correct, but florid and pleasing, had remained unrivalled during thirty years.

in small oblong 4to, is chiefly curious and valuable for the representations of such musical instruments as were used in Germany at the time it was written; which, though but coarsely cut in wood, are accurately represented. There are, among keyed-instruments, the Virginal, Spinnet, and Clavichord, all three in the form of a small modern Piano Forte; an upright Harpsichord; a Regal, or portable Organ, chiefly composed of reed-stops, and in Roman Catholic countries used in processions; and a Large, or Church-organ. Of bowed-instruments, we have here only the Monochord, Rebec, or three-stringed Violin, and the Viol da Gamba. The Vielle, Lute, Harp, and Dulcimer; Cornet, Schalmey, or Base Clarinet, both played with reeds; Flutes of various size, among which is the *Zwerchpfeiff*, *Flute Traversiere*, or, as we call it, German-flute. Four other wind-instruments, peculiar to Germany and northern countries, are here exhibited: as, first, the *Ruspfeiff*, or Russian Flute; second, the *Krumhorn*, or crooked Horn, a kind of Shawm, in imitation of which we have a reed-stop in our old Organs, called the *Cromhorn*, which has by some been imagined to be a corruption of the word *Cremona*; third, *Gemsen Horn*, or wild goat's Horn; and, fourth, the *Zincke*, or small Cornet. After these we have the Bagpipe, Trumpet, Sacbut, Side-drum, Kettle-drum, French-horn, Bugle-horn, and even the Jews-harp, and Clappers. Most of these instruments being in common use, and well known, need no representation after the rude types of them given by Luscinius, as they have been since much better delineated and engraved in Mersennus, Kircher, and in still later musical writers.

We are now arrived at the period when the *Dodecachordon* was published by HENRY LORIS or LORIT, commonly called GLAREANUS, from *Glaris*, a town in Swisserland, where he was born, in 1488. Glareanus may be more properly ranked among men of letters, and *Dilettanti* in Music, than musician by profession; and his abilities, as a scholar and critic, have been much less disputed by the learned, than his knowledge of Music, by musicians.

He studied at Cologne, Basil, and Paris; his preceptor in Music was John Cochläus; and in literature, Erasmus, with whom he liv-

ed in strict friendship, and by whom he was warmly recommended, in a letter still extant, to the Archbishop of Paris (*p*). He is called by Walther, a philosopher, mathematician, historian, geographer, theologian, and poet; indeed, he distinguished himself in most of these characters. Gerard Vossius calls him a man of great and universal learning; and for his poetry, the Emperor Maximilian I. honoured him with the laurel crown.

His treatise on Music, which was published at Basil, in Switzerland, 1547, has been already so frequently mentioned, and so many extracts have been given from it, in the second volume, that little more seems necessary to be said of it here, except to explain the title and chief design of the work. ΔΩΔΕΚΑΧΟΡΔΟΝ, implies twelve modes; to which number he wished to augment the ecclesiastical tones, which had never before exceeded eight, from the time of St. Gregory. Zarlino, and a few more, adopted the opinion of Glareanus, but soon relinquished it, on finding that they had made no converts. Indeed, the whole twelve modes of Glareanus contain no other intervals than those to be found in the key of C and A natural, or in the different species of octave, in those two keys; and though his augmentation extends the compass of sounds used in the modes, it offers no new arrangement of intervals, as may be seen by his title-page, when it tells us that the authentic modes are D, E, F, G, A, C, and the plagal A, B, C, D, E, G; where we perceive that A, C, E, G, are repeated, by being made both authentic and plagal.

If instead of twelve modes, Glareanus had augmented the eight to twenty-four, by assigning two to each semitone in the octave, he would have done real service to the Music of his time; but his contemporaries were not yet ready for such an innovation, being still held too fast in the trammels of the Church to dare use any other sounds than those which time had consecrated, and authority admitted within its pale.

His book, however, contains many curious anecdotes and compositions of the greatest musicians of his time, which were excellent studies for his countrymen and contemporaries, and, if scored, would

(*p*) *Epist.* 235.

be

be still very instructive and useful to young contrapuntists. Glareanus died 1563, aged 75.

GREGORY FABER, 1552, published at Basil, *Musices Practicæ Erotematum*, in two books, octavo, containing 230 pages; which, when they were written, could have been but of small use to a student without the colloquial commentary of a master; and now, when there are more and different things to teach, the utility of this work is contracted into a very narrow compass.

In 1556, HERMAN FINCK published at Wittemberg, *Practica Musica*, with examples of various characters, propositions, canons, and opinions of the ecclesiastical tones.

The next theoretical or didactic publication in Germany, that I have met with, is the *Erotematum Musica* of FREDERIC BEURHEIUS, Nuremberg, 1573; but, upon examination, this appears to be a short elementary tract, which contained nothing new or uncommon, even at the time it was written.

In 1580, the *Dodecachordon*, of Glareanus, was very severely handled by Jacob Bilenius, whom Walther calls a doctor and excellent musician. Criticism, doubtless, sometimes checks modest genius and effusions of originality; but every art approaches perfection with the greater rapidity, when the productions of ignorance and inexperience are submitted to its lash. Glareanus offended pious ecclesiastics by his innovations in the modes of the church; and those who had a reverence for antiquity, by his dislocation and new arrangement of the Grecian modes; among these, Salinas, Battista Doni, and Meibomius, have severely censured him for his superficial acquaintance with the musical writings of the Greeks that have been preserved, and his absurd application of the ancient names of their modes to modern compositions, that are constructed upon principles entirely different.

In 1582, EUCHERUS HOFMAN published at Stralsund, where he was corrector of the public school, a treatise on the *Tones or Modes of the Church*; *Doctrina de Tonis, seu Modis Musicis*. This author, who is a follower of Glareanus, pretends that the science of modes, or *canto fermo*, which is the most excellent and useful part

of

of Music, is but little understood by the moderns; and that he draws his information from musicians of the highest antiquity.

CYRIACUS SNEGASIUS, in 1590, published at Erford, a tract upon *Harmonics*, or the Use of the *Monochord*, an instrument for measuring and ascertaining the proportion of sounds by a single string, of which he ascribes the invention to the Arabians; the only new idea I could find in the book, of which the original title is, *Nova et exquisita Monochordi dimensio*.

The same author published, likewise, in 1590, an elementary tract, entitled *Ifagoges Musicae*, in two books, the chief merit of which seems brevity; consisting of little more than definitions of musical terms, with short examples in notation.

SETHUS CALVISIUS, or *Calvitz*, who, according to Walther (9), was the son of a poor peasant, and born in Thuringia, 1556, was a very learned theorist, and good practical musician; of which he has left ample proofs to posterity in his short treatise called ΜΕΛΟΠΟΙΑ, *five Melodiae condendae ratio, quam vulgò musicam poeticam vocant, ex veris fundamentis extracta et explicata*, 1592. This ingenious tract contains, though but a small duodecimo volume, all that was known, at the time, concerning Harmonics and practical Music; as he has compressed into his little book the science of most of the best writers on the subject; to which he has added short compositions of his own, to illustrate their doctrines and precepts. With respect to composition, he not only gives examples of concords and discords, and their use in combination, but little canons and fugues of almost every kind then known.

He composed, in 1615, the 150th psalm in twelve parts, for three choirs, as an *Epithalamium* on the nuptials of his friend Casper Ankelman, a merchant of Hamburg, and published it in folio at Leipfig, the same year. Several of his hymns and motets appear in a collection of Lutheran Church-music, published at Leipfic, 1618, in eight volumes quarto, under the following title: *Florilegium portens CXV. selectissimas cantiones*, 4, 5, 6, 7, 8, voc. *præstantissimo-*

(9) *Musical Lexicon.*

rum auctorum. Some of these I have had the curiosity to score, and found the laws of harmony and fugue preserved inviolable.

How much the musicians in Germany were enlightened by such numerous treatises, I know not; but as they were all written in Latin, it seems as if they could not have been read with much profit by every student and professor who was in want of their assistance; and perhaps all these theories had less effect in stimulating and guiding genius, than the many excellent examples of composition published by Glareanus in his *Dodecachordon*, and the learned musician and bookseller Rhaw, who printed, at Wittemburg, 1538, not only *Select Harmony for four voices*, consisting of two Latin *Passiones*, the one by John Galliculus, and the other by Jacob Otrecht, with Masses, Lamentations of Jeremiah, and Motets by John Walther, Lewis Senfels, Simon Cellarius, Benedict Dux, Eckel, Lemlin, Stoel, and Henry Isaac, to which Melancthon furnished him with a Latin preface; but in 1544, published, in oblong quarto, 123 *German Sacred Songs*, of four and five parts, for the use of schools. Prefixed to the second part of this publication, containing ecclesiastical hymns, set by sixteen different German composers, there is a print of the editor, Geo. Rhaw, *Typographus, Wittemb. anno ætatis sue LIV.*

The titles, at least, of many other Teutonic compositions of the sixteenth century, by Alexander Agricola, Utendal, Knefal, Amerback, Hoemel, Paix, Rosthius, Hasler, Aichinger, &c. are preserved; but though the musical treatises above mentioned are still subsisting, it would be very difficult to find the musical compositions of these venerable authors; for literary productions have ever enjoyed greater longevity than musical.

Alexander Utendal, who published, in 1570, *Cantiones Sacras*, for five and six voices, and afterwards Masses, Motets, and French Songs, of many parts, is the first German composer recorded by M. Marpurg, in his *Traité de la Fugue*, though he was much posterior to those who furnished examples of composition to Rhaw and Glareanus (r),

(r) Utendal's name occurs in Morley's list of composers, whose works he had pe-

rused "for finding the true use of the mode." *Intro. ad Calem.*

John Knefal, in 1571, published likewise *Cantiones*, for five, six, and seven voices; and, in 1575, others, accommodated as well to instruments as voices. These are the first vocal pieces *concertate*, or accompanied with instruments, that I have seen, by a German composer.

Jacob Hænel, Handl, or Gallus, a native of Crain, in Germany, acquired great reputation, about the year 1580, by a motet of his composition, in twenty-four parts, for four choirs.

Elias Nich. Amerbach, Leon Hasler, and Jaques Paix, all famous performers on the organ, published fugues, and other pieces for that instrument, during the latter end of the sixteenth century.

Several particulars concerning the use of Music in Germany, during the same century, may be gathered from Montagne, who travelled through that country, in 1580. At Kempten, in Bavaria, he says, that “the Catholic church of this city, which is Lutheran, “is well served; for on Thursday morning, though it was not a “holyday, mass was celebrated in the abbey, without the gates, “in the same manner as at *Notre Dame*, in Paris, on Easter-day, “with Music and Organs, at which none but the priesthood were “present (s).”

At the church of the Lutherans, Montagne heard one of the ministers preach in German to a very thin congregation, “when “he had done, a psalm was sung, in German likewise, to a melody a little different from ours. At each stave the organ, which “had been but lately erected, played admirably, making a kind of “response to the singing (t).” This is an early instance of the use of *interludes*, in accompanying psalmody on the organ. “As a new-married couple,” continues Montagne, “went out of church, the “*violins* and tabors attended them (u).” This circumstance is mentioned to prove, that the *violin* was then a common instrument in Germany.

At Lansperg, the same author tells us, that “the town-clock, like many others in this country, struck quarters, *et dict-on que ce-*

(u) *Les Violons*, (not *Violes*) et *Tambourins*.

lui

lui de Nurembergh sone les minutes." This is likewise an early proof of *chimes*, in Bavaria, whence they are said to be brought into the Low Countries.

It is here that this author gives an account of the *Cantor* or *Chanter*, who directs the singing in Lutheran churches. "Two seats are placed, one for the minister, and for the preacher, when there is one, and another below for the person who leads off the psalm. After each verse the congregation waits till he has pitched and begun the next; then they all sing together, *Pele mele*, right or wrong, as loud as ever they can (x)."

Besides the theoretical writers on Music, and composers of this vast empire already mentioned, the talents and abilities of innumerable practical musicians, and performers of this early period, are celebrated; particularly by Luscinius and Ornithoparchus. This last author dedicates the fourth book of his *Micrologus* to Arnold Schlinck, a celebrated blind organist, in the service of the Count Palatine. But great organs and great organists seem, for more than two centuries, to have been the natural growth of Germany. The organ which is still subsisting in St. Martin's church, at Groningen, in North Holland, and of which some of the stops are composed of the sweetest toned pipes I ever heard, was partly made by the celebrated Rodolph Agricola, the elder (y). And from that time to the

(x) *Deux chaises, l'une pour le ministre, et lors il y en avoit un qui prechoit, et au dessous une autre où est celui qui achemine (entonne, commence) le chant des psalmes. A chaque verset ils attendent que celui-là donne le ton au suivant; ils chantent pesle-mesle, qui veut, et couvert qui veut.* See Germ. Tour, Tom I, p. 116.

(y) Rod. Agricola, who died in the flower of his age, 1485, was a prodigy in literature and science. Vossius says he was a great philosopher; that he understood Latin, Greek, and Hebrew, and was a great musician. Walther, that he not only set to Music in four parts many hymns in his mother-tongue, in teiner muttersprache, but played on the lute and sung admirably. Erasmus, in a pompous eulogium, places him among the first of mortals. But Agricola

himself, thought little of his fame, and published none of his own works, which were, however, very numerous. Card. Bembo regarded him as the first man of his age; and Paul Jovius expressly says, that Agricola flamed the Jews for Hebrew, and the Athenians and Romans by his Greek and Latin. He was born at Basllon, a small town in Friseland, near Groningen, and died at forty-three. Melchior Adam extends his praises so far as to say, that in eloquence he had the cadence of Lactantius, the period of Pliny, the penetration of Socrates, the richness and variety of Cicero, the points and subtilty of Quintilian, and the vehemence and prejudices of St. Cyprian. Several celebrated Germans of the name of Agricola have contributed to the progress of Music, by their writings and compositions, particularly

the present the number of organ-builders, whose names are well known to the lovers of that noble instrument in Germany, is hardly credible in any other country. But to shew my English readers what a serious concern the erection of an organ is in this part of the world, I shall close my account of the progress of Music in Germany, during the sixteenth century, by relating the manner in which the magistrates of Groningen contracted with David Beck, of Halberstadt, to construct an organ for the castle-church of that city.

In the year 1592, articles were drawn up between the magistrates and organ-builder, in which it was agreed by the former, that for an instrument, the contents of which were minutely described, a certain sum stipulated should be paid to the latter upon its completion, provided it was approved, after trial and examination, by such organists as they should nominate for that purpose. The instrument in its construction employed the builder four years; and in 1596, the most eminent organists in Germany being invited, the names of all those who signed the certificate of approbation, to the amount of fifty-three in number, are recorded in a book called *Organum Gruningense redivivum*, published by Andrew Werckmeister, 1705 (z).

larly Martin and Alexander Agricola; the first having published from, 1529 to 1556, when he died, many very useful theoretical tracts at the time; and the latter, in the beginning of the same century, according to Sebaldus Heyden, was an excellent composer.

(z) This organist and voluminous writer on Music, who was born in 1645, was ap-

pointed, by the father of the late king of Prussia, inspector-general of all the organ-work in his dominions. He published two books, called *Orgel Probe*, which are very curious and instructive, concerning the history and construction of organs in Germany.

CHAP.

VOL. III.

CHAP. IV.

Of the State of Music in France during the Sixteenth Century.

THE inhabitants of this kingdom, though ever active in the cultivation of the arts, made but small progress in any of them, if we except the art of war, during the sixteenth century. “Before the reign of Francis I.” says Perrault (a), “nothing was thought worthy of attention by the king and nobles of France, that was not military; and it seems as if the chace, tilts, and tournaments, and the game of chess, which are images of war, had been the only pleasures which they were capable of tasting: dancing itself was only animated by the fife and drum, and architecture gave no other form to their palaces than that of a fortress.” Even during the reign of this active and splendid prince (b), Music does not seem to have received much improvement, either in the court or kingdom of France.

According to Marot, however, the spinet seems to have been an instrument in common use among the French ladies at this time; for in the dedication of his version of the psalms to his fair countrywomen, he tells them, that, he hopes, divine hymns will supersede love-songs, and fill their apartments with the praises of Jehovah, in accompanying them on the spinet.

*E vos doigts sur les ESPINETTES,
Pour dire SAINTES CHANSONNETTES (c).*

Specimens of the abilities of several great French musicians have been given in the first volume, among the most early cultivators of counterpoint; but it does not appear that the works or names of so many able composers have been preserved of those who flourished

(a) *Pref. à la Traduction de Vitruve.*

(b) From 1515 to 1547.

in France, during the time of Francis I. and his successors in the sixteenth century, as in Italy, Germany, the Netherlands, or England, during the same period; and M. La Borde (*d*), a very diligent and patriotic enquirer after every species of Music that can do honour to his country, has furnished us with but few examples of counterpoint produced in France before the seventeenth century. Orlando di Lasso, born at Mons, whom we have classed in the Flemish School (*e*), and Claude le Jeune, a native of Valenciennes, who in downright courtesy is granted to France (*f*), are the chief composers of the preceding century of whose works he has exhibited examples; except Charles d' Helffer, whose name, country, or period of existence, is neither to be found in M. La Borde's work, nor in any other that I have been able to consult.

Rabelais' list of celebrated musicians of his acquaintance (*g*) would, however, have furnished more names for France: among those whom Lodovico Guicciardini (*b*) has not claimed for the Netherlands, these shall now be mentioned, and a few more who deserve a place in a *general history* of their art, though they were not quite of the first class among professors then flourishing in Europe. But France seems not only to have produced fewer practical musicians, but theorists, during this century, than any other, since the invention of counterpoint; for in *Latin*, I hardly find any musical tract of the least importance, except the *Elementa Musicalia* of Faber Stapulensis, printed 1552; and in the *French language*, though the titles of eight or ten small elementary tracts are come down to us, the books themselves have been thought so little worth preserving, that they are now not to be found in the most numerous and general receptacles of literature in Europe.

This paucity of French musicians cannot, however, have been occasioned by any sudden paroxysm of mental relaxation, indolence,

(*d*) *Essai sur la Musique.*

(*e*) Mons was under the dominion the Spaniards till the year 1696, when it was taken by Lewis XIV. but was restored at the peace of Ryswick, and now belongs to the Emperor.

or insensibility ; for not only during the middle and lower ages, but even since the arrival of Lulli in France to the present times, their national poetry and Music have been cultivated, cherished, and pursued, with a degree of ardour and passion that has hardly ever been equalled in any other nation. The truth is, that from the death of Francis I. to the total suppression of the league, in the time of Henry IV. the kingdom never enjoyed that internal peace and domestic tranquillity, which are necessary to the cultivation of the liberal arts ; for during this period the inveterate enmity of Spain, and implacable fury of bigotry and fanaticism which involved the nation in a civil war of forty years, must have been invincible impediments to the progress, and even use, of Music ; which, among all the miraculous powers ascribed to it by the ancients, has never been said to drive away the evil spirits of party rage and religious rancour.

During the reign of Francis I. which was frequently turbulent and unfortunate, though we hear but of few great musicians at his capital, yet so many excellent masters of harmony subsisted, particularly in the Low Countries, that Music in parts became common all over Europe.

The first French composer I shall name, during the reign of this prince, is CLEMENT JANNEQUIN, who, though he is placed by Walther in the middle of the sixteenth century, must have flourished much earlier ; as a curious composition by him, called *La Bataille*, printed in the tenth book of *French Songs for four voices or instruments*, is preserved in the British Museum ; which, though it did not appear in this edition, by Tylman Susato, of Antwerp, till 1545, must have been composed long before that time ; for the song was written and set on occasion of the famous and obstinate battle of Marignan, which lasted two days, and was fought during the first year of Francis I. 1515, between the French and Swiss, who disputed their passage to the Milanese.

As the whole title of this tenth book of songs suggests reflections upon the state of Music at this early period, different from any which there has yet been occasion to make, it shall have a place here.

Le Dixiesme livre des Chansons, contenant La Battaile à 4, de Clement Jannequin, avec la cinquiesme partie de Phillippe Verdelot, si placet, et deux Chasses du Lievre à 4 Parties, et le Chant des Oyseaux à 3, 1545.

La Chasse du Lievre, à 4. Incognito Authori.

La Chasse du Lievre, à 4. Nic. Gombert.

In the *Battle-piece*, which, as well as each of the compositions printed with it, is, at least, as long as seven or eight of the songs contained in the other books of this collection, there are several movements, in each of which, the noise and din of war, during this memorable conflict, are imitated. In the *Song of Birds*, and in each composition called *the Chase*, or hunting of the hare, the composers have severally tried to express the words with more exactness than I have seen attempted before. Indeed, the best counterpoint and the most ingenious contrivances, with respect to musical composition, anterior to this period, are contained in the masses and motets of the church; where nothing like expression, or even the true accent of words, is attempted. The songs in parts already given from the Fairfax MS. (k) are likewise totally deficient in these particulars. But here, though clumsily done, *musical imitation* is attempted, and, it seems, for the first time. Indeed, our countryman, Ravenscroft, a hundred years later, has not been more successful in his harmony of four voices, with which he endeavours to express “the pleasure of the five usual recreations of *Hunting, Hawking, Dancing, Drinking, and Enamouring* (l).

The name and works of Jannequin had penetrated into Italy early in the sixteenth century (m). I am sorry that this singular compo-

(i) This author has been already mentioned among the Flemish composers, in the preceding volume, p. 512.

(k) See Vol. II. p. 539, et seq.

(l) These compositions are given by Ravenscroft in illustration of the doctrine con-

tained in his *Brief Discourse*, published 1614.

(m) See Zarlino, the elder Doni's Catalogue of Music, P. Pontio, and Zacconi. A work of his, called *Inventiones Musicales*, in four and five parts, was published at Paris and Lyons, 1544.

fiction is not only too long for insertion, but of such a kind as is incapable of extract; otherwise, I should have wished to present my curious readers with the *military terms* then used in battle; the imitation of guns, trumpets, fifes, and drums; with the clashing of arms; all which are described in old French, and sometimes imitated in the Music, which is all *vocal* (n).

I shall give a list in chronological order of French musicians who chiefly distinguished themselves after the death of Francis I. for during his reign, I meet with none that were very eminent.

We are told (o) that CERTON, master of the boys of the Holy Chapel, at Paris, published in 1546, a work containing thirty-one psalms of David, set to Music in four parts; but are not informed whether the Music was good or bad, or if the words were Latin or from the version of Clement Marot, which about this time was in great favour at the French court.

Of this composer, however, whose name, though not mentioned by Walther, occurs in Rabelais' list of celebrated musicians, there is an admirable motet, *Diligeat autem eum Jesus*, in the first book of Cipriani's motets, published at Venice, in 1544; which appears to me equal, if not superior, to any composition of the same kind that I have seen by a native of France. The tenor part in this motet, which is in five parts, does not sing the same words as the other four, but is constantly making supplication to St. John, in a fragment of simple melody, or Canto fermo, repeated in the key-note and the fifth of the key, after two bars rest, from the beginning to the end of the composition.

(n) A more successful attempt, however, at musical painting was made in the spring of 1783, in London, with *instruments*, by M. KLOEFER, a German musician of genius, knowledge, and experience, who undertook to imitate by sounds, in a kind of *musical pantomime*, every circumstance belonging to an army, even to a *council of war*. It was unluckily out of my power to attend this performance myself, but I have been assured that the composer, with the assistance of an excellent band, kept his word in the most essential parts of his promises; that there was much good Music, much inge-

nulty of imitation, and far greater effects produced by musical painting, than had been imagined possible by those who had given the greatest encouragement to expectation. But even this effort at imitative Music has been far exceeded since, by the *Bataglia* of SIGR. RAIMONDI, which has been often performed, and justly applauded, not only for the intelligence and ingenuity with which military sensations have been excited, but as an elegant and agreeable composition.

(o) *Essai sur la Musique*, Tom. III. p. 404.

DIDIER

DIDIER LUPI II. another of Rabelais' favourite musicians, set *Chansons Spirituelles, Sacred Songs*, in 1548^(p); as did Guillaume Bellen, the *Canticles* in four parts, 1560. Joachim Burck was author, likewise, of twenty-five pieces, chiefly ecclesiastical, for voices and instruments, 1561; and Philibert Jambe de Fer, set *Marot's Psalms*, in many parts, the same year. Pierre Santerne set all the psalms which were printed at Poitiers, 1567^(q), and NOË FAIGNIENT composed songs, motets, and madrigals, in three parts, 1568.

Among these are found the original words of a song, called *Su-fanna*, which was in such favour at the time, as to be set by several of the principal composers of Europe, particularly by Cyprian Rore, and Orlando di Lasso. Peacham, in speaking of Orlando, instances this song as a delightful composition, "upon which ditty many " have since exercised their invention^(r).

John D'Etrée, a performer on the hautbois in the service of Charles IX. published four books of *Danseries*, first writing down the common lively tunes, which, till then, had been probably learn-

(p) This and several other curious books were purchased in 1782, at the sale of the late excellent organist's collection of Music, Mr. Jos. Kelway, master to her majesty, to whose professional merit, with which alone I was acquainted, it seems but justice to take this early opportunity of bearing testimony. During many years of his life his manner of playing the organ, at St. Martin's in the Fields, was so masterly and original, that it was the fashion for the first musicians in London to frequent that Church, in order to hear him; and, among the rest, I have often seen Mr. Handel there. Mr. Kelway was an enthusiast who had nothing symmetric or studied in his voluntaries, which, if they resembled any written Music, were more in the wild and desultory style of Geminiani, his master, than any other. He composed too little to write with facility; and, by despising every thing that was common, and a determination to be new and masterly, he seems, in the few works which he published, to want grace, melody, and experience. His extempore flights,

however, on the organ, and his manner of executing the Lessons of Scarlatti, on the harpsichord, will long be regretted by those who had the pleasure of hearing him; for till a new style of Music and execution on keyed-instruments was introduced here, by the use of *piano fortes*, the fire and precision of his performance were such as few of the greatest professors of any country ever attained.

(q) In these publications, the psalmodic rage which, about the middle of the sixteenth century, and which has already been traced from its source, begin to appear.

(r) I found the Music of Orlando di Lasso in a set of Dr. Aldrich's books, at Christ Church, Oxford, without the words, and had the curiosity to score it; but though the harmony and imitations are masterly, the melody is so much divided among all the five parts, that it is not very easy to determine which was intended by the author to be the principal. Indeed, the effect of each is rather heavy, psalmodic, and doleful, than *airy* or *pathetic*.

ed by the ear, and played by memory, about the several countries specified in the title (s).

The name of CRESPEL appears in many of the best collections of motets and songs that were published about the middle of the century. And in the first book of the Louvain Collection, printed 1558, there is a song by this composer, in four parts: *Fille qui prend facieux Mary*, in which a double fugue is carried on, the first subject by the soprano and counter-tenor, and the second by the mezzo soprano and base, in such an ingenious manner as does honour to his memory (t).

RONFARD, the favourite bard of France, during the reigns of Henry II. Francis II. Charles IX. and Henry III. had his songs frequently set to Music; particularly by ANTHONY BERTRAND, who published them in four parts, 1578, under the title of *Amours de Ronfard*; and by FRANCIS REGNARD, in four and five parts, 1579. This was during the life of the poet, whose decease did not happen till 1585, when he was honoured with a public and magnificent funeral, at which the eloquent Cardinal Du Perron pronounced an oration, and the first personages in the kingdom attended in such numbers that Cardinal Bourbon and many other princes and nobles were obliged to return, after attempting in vain to penetrate the croud, in order to join the procession. The burial-service on this occasion was new set, *en musique nombrée*, that is to Music in parts, in florid counterpoint, accompanied with instruments instead of Canto-fermo; and was sung by the best singers in France, those in his majesty's service being there by command; the king justly lamenting the death of a person who had been so great an ornament to his kingdom (u). It is said by the biographers of this poet, that he was very fond of Music and sung agreeably.

But another poet of great reputation at this time, and a friend of Ronfard, JOHN ANTHONY BAIF, set his own verses to Music;

(s) The editor of these books tells us, that they contained *Les chant des branles communs, gais, de champagne, de Bourgogne, de Poitou, d'Ecosse, de Malte, des Sabots, de la Guerre, & autres gaillardes, ballets, voltes,*

basses dances, hauberrois, allemandes. Printed at Paris, 1564.

(t) This collection is in the Brit. Museum.

(u) Binet, *Vie de Ronfard*.

not to such Music as might be expected from a man of letters, or a Dilettanti, consisting of a single melody, but to counterpoint, or Music in parts. Of this kind he published, in 1561, twelve Hymns, or Spiritual Songs; and, in 1578, several books of Songs, all in four parts, of which both the words and the Music were his own. When men of learning condescend to study Music *à fond*, professors think the art highly honoured by their notice; but poets are very unwilling to return the compliment, and seldom allow a musician to mount Parnassus, or set his foot within the precincts of their dominions. Baif, however, was allowed to be as good a musician as poet; and what entitles him to the more notice here, is the having established an academy, or concert, at his house, in the suburbs of Paris, where the performance was frequently honoured with the presence of Charles IX. Henry III. and the principal personages of the court (x).

Charles IX. of whose reign even French Roman Catholics are ashamed, was as fond of Music as Ptolemy Auletes, Nero, our Henry VIII. and several other princes, whose hearts it could not mend. Many musicians were patronised by this king, particularly Francis Costeley, his organist and valet de chambre; Adrian Le Roy, a lutenist, and Stephen, a singer, both brothers in-law to Ballard, the first printer of Music in France: with GRANIER, who composed hymns, proses, canticles and songs, some of which he dedicated to queen Margaret, sister to Charles IX. Merfennus (y) gives a curious description of a viol sufficiently spacious to contain young pages, who sung the treble of ravishing airs, while he who played the base part on the viol sung the tenor, in order to form a complete concert in three parts, such as Granier and others used to perform in the presence of queen Margaret. Besides these musicians, ANTOINE SUBIET, surnamed *Cardot*, a singer, stood so high in this prince's favour, that, in the year 1572, so fatal to the Hugonots, he made him bishop of Montpellier.

This seems the place to speak of poor GOUDIMEL, the greatest musician in France at this time, whose compositions are become so

(x) See Merfennus in *Genes*, p. 1683, for an account of this establishment.

(y) *Harmonie Univ.* Liv. iv. *des Instrumens* p. 191.

scarce

scarce, that his name and reputation are more preserved in pity of his misfortunes, by Protestant historians, than by any knowledge of the excellence of his works, which are now only in the hands of tradition. Of the psalms and tragical end of this musician, an account has already been given (z); and with respect to his having been master of Palestrina, that point has likewise been discussed (a): indeed, his history is here resumed, in consequence of the claim which the French lay to him as a native of their country, which might well be disputed, as *Franche Compté*, the place of his birth, was not taken by Louis XIV. till the year 1668, more than a century after Goudimel was massacred at Lyons. But though he was not strictly obliged to France for his birth, he was indisputably its debtor for his death.

The earliest mention of Goudimel, as a composer, that I have been able to discover, is in a work entitled *Liber quartus Ecclesiasticarum Cantionum quatuor vocum vulgò Moteta vocant*, printed at Antwerp, by Sufato, 1554, eighteen years before his death; the first part of which will be inserted on the next plates, p. 267 et seq. as a specimen of very pure and correct harmony, constructed entirely upon the principles of the Romish ecclesiastical modes, probably before he became a disciple of Calvin (b).

Another great psalmodist and follower of Calvin, whom the French rank among their best composers of the sixteenth century, was CLAUDIN, or CLAUDE LE JEUNE, a native of Valenciennes (c). Though *Le Jeune* was his family name, and not added to *Claude* merely to distinguish him from Claude Goudimel, these composers are frequently confounded; and I am inclined to believe that Clau-

(z) Page 45.

(a) Page 185.

(b) Draudius, *Bibl. Class.* Tom. II. p. 169, gives the following title of his Psalms, without the date: CLAUD. CONDINELLI *ad Psalmos Davidis Harmoniæ, 4 vocum.* Paris. ap. Adrian Regium, 410. But in another place, *Bibl. Exot.* p. 209. he gives us the French title in a more correct and satisfactory manner: CLAUDE GOUDIMEL. *Les Pseaumes de David, mises en Musique à quatre parties, en forme de Motets. A Paris, par Adrian Le Roy, et Rob. Ballard, 1565.*

Chansons Spirituelles de M. Ant. de Muret, mises en Musique à 4 parties, par le même: à Paris, Nicol. du Chemin, 1555.

Claudii Goudimelli *Flores Cantionum, 4 voc. Ludg. 1574. La fleur des Chansons des deux plus excellens musiciens de notre tems, savoir d'Orlande de Lassus et de Claude Goudimel, à Lyon, 1576. Les Pseaumes mises en rime François, par Clement Maiot et Theodore Beze, mises en Musique à 4 parties, par Claude Goudimel, 12mo. 1607.*

(c) See above, p. 46.

din is sometimes an appellation given to Goudimel as well as Claude Le Jeune: for among the *Motetti del Frutto*, published at Venice, 1539, there is a motet by Claudin, which could hardly be Claude Le Jeune, who was living in 1598; at which time a print of him was prefixed to his *Dodecachorde*, or Compositions upon the twelve Modes of Glareanus, in which he does not appear above forty years of age. He was not only in the service of Henry IV. but in great favour at the court of his predecessor Henry III. particularly in the year 1581, at the wedding of the Duc de Joyeuse, when his Music is said, by several writers of the times, to have had marvellous effects. Thomas d'Embry (*d*), who was his intimate friend, and had the story from Claudin himself, relates what happened upon this occasion in a less suspicious manner than the rest. "This great musician," says he, "at first caused a spirited air to be sung, which so animated a gentleman who was there, that he clapped his hand on his sword, and swore it was impossible for him to refrain from fighting with the first person he met; upon which Claudin caused another air to be performed, of a more soothing kind, which soon restored him to his natural temperament. Such power," continues he, "have the key, movement, measure, and inflexions of voice over the affections."

His works consisted chiefly of miscellaneous songs, and psalms; *de melanges, des chansons, des pseumes*, of which he published many books. His *melanges* consist of songs and motets, in French, Italian, and Latin. His songs are chiefly French, and in many parts like the madrigals of Italy; of his psalms, an account has already been given (*e*). Many of his single productions appear in the collections of the times, that were published in Italy and the Low Countries: I have scored several of them, but have been generally disappointed in my expectations of excellence. In comparing them with the best cotemporary composers of Italy and the Netherlands, he appears to have been more a man of study and labour than of genius and facility.

The best of his compositions that I have found, except his psalms, the musical reader may see on the plates, p. 271 and 272.

The determined spirit of fugue perhaps never appeared stronger than in this song, where there is, indeed, great art and skill, but so little melody and rhythm, that the time and modulation are equivocal from the beginning to the end: for the subject is begun on an accented part of a measure, and answered upon an unaccented; and though the melody manifestly begins and ends in the chord of G, yet by keeping F constantly natural, there is a stronger impression throughout of the key of C than of any other (*f*). Indeed, this composition renders the assertion of Merfenne very probable, who tells us that “when Claudin first presented his pieces of five, six, and “seven parts to the masters of Italy and Flanders, they would not “look at them; and his compositions would never have been per- “formed by them if he had not written something in two parts; “in which, however, he at first succeeded so ill, that he confessed “himself ignorant of the true principles of his art (*g*).”

The names and works of several minor musicians of France, of the latter end of the sixteenth century, are recorded in catalogues; but though I have been able to procure none of them, I shall point them out to the curious reader, whose enquiries may be more successful.

Jean de Castro composed and published from 1570 to 1592, many songs, sonnets, and madrigals.

Louis Biffon transformed *Nicholas du Chemin's* four-part songs into duets, and published songs of his own, in 1576, which were esteemed.

François Rouffell composed songs of four, five, and six parts, 1577.

Jean Pervin printed at Lyons, songs of four to eight parts, 1578.

Nicholas de la Grotte, organist to the French king Henry III. composed and printed songs in many parts, 1583.

Jean Chardavoine made a collection of songs in the manner of Vaudevilles, 1585.

(*f*) This was still adhering to the ancient modes of the Church, and may be called a *Rag of Popery*; for however reformed the author may have thought himself in religion,

his Music was still Papistical.

(*g*) *Harm. Univ. Lib. iv* p. 197. and *Dissert. Vol. I.* p. 148.

Jean Serven set Buchanan's Latin version of the psalms, in four, five, six, and eight parts, which were printed at Lyons, 1579, quarto; and French songs, in the same number of parts, that were likewise published at Lyons, 1587.

The LUTE was the most favourite and general instrument in France, as well as other parts of Europe, about the end of the sixteenth century; and James and Charles Hedington, natives of Scotland, are said to have been excellent performers upon it, and much in favour with Henry IV. the most amiable prince in history; who, though he is not said to have either understood or felt Music much, had the art of attaching his servants by his condescension and benevolence more than many others have been able to do by temporary rapture and munificence.

Julien Perichon was another celebrated lutenist during his reign, whose performance seemed more agreeable to Henry than that of any other.

The VIOLIN seems to have been brought into favour at the court of France before any honourable mention is made of it elsewhere, by the arrival of BALTAZARINI, a great performer on that instrument; who, at the head of a *band of Violin-players*, was sent from Piedmont, by Marshal Brissac to Catharine de Medicis, and appointed by that princess her first valet de chambre and superintendant of her Music (b). Baltazarini having contributed greatly

to

(b) The *Violin* with four strings, tuned 5ths, and without the finger board being fretted, is an instrument of much later invention than the *treble-viol*, with six strings, tuned chiefly by 4ths: thus,

and with a fretted finger-board. Galilei (*Dial.* p. 147) says that "both the violin and base, or violoncello, were invented by the Italians, perhaps by the Neapolitans;" and I am unable to confute that opinion. Corelli's violin, now in the possession of Signor Giardini, was made in 1578, and the case painted by Annibal Caracci, probably

several years after the violin was finished, at which time Anib. Caracci was but eight years old. Montagne, who was at Verona 1580, says that there were organs and *violins* to accompany the mass, in the great church. *Journ. du Voyage.*

M. Bonnet, in his patriotic *Hist. de la Mus. et de ses Effets*, Tom. I. p. 212. however unwilling he was to allow Italian Music to be superior to that of his own country, makes in an unguarded moment two very important concessions in favour of Italy: first, allowing that the most curious books and manuscripts in the *Bibliothèque du Roy* were brought thither by Qu. Catharine de Medicis, from Florence, out of the collection of her great grand-father, Lorenzo il Magnifico: secondly, that "what contributed most to the

to the amusement of the royal family and nobility, by his ingenuity in suggesting magnificent plans, machinery, and decorations, for *Balets, Divertissimens*, and other dramatic representations, received the quaint title of *Beaux-joyeux*, by which he ever after continued to be called: and Henry III. having, in 1581, married his favourite minion, the Duc de Joyeuse, to Mademoiselle de Vaudemont, sister to his queen Louise de Lorraine, almost ruined his kingdom in balls, masquerades, tilts, tournaments, and every species of expensive festivity, which could be devised on the occasion (i).

The queen likewise, in honour of her sister's nuptials, gave an entertainment at the Louvre, in which a *Ballet* was exhibited, called *Ceres and her Nymphs*, which was then a new kind of *spectacle* in France, *avec une grande Musique*, composed by the celebrated Claude le Jeune. The *Entrées de Balets*, in this fête, were invented by Baltazar de Beaujoyeux, the famous Piedmontese performer on the violin, who having published an account of his devises in a book which is now become extremely scarce, I shall present my readers with a sketch of its contents (k).

the perfection of Music in France, was the great number of Italian musicians who followed that princess, and excited emulation in his country men; it was then that they began to change their rude and simple method, in order to conform, in some measure, to the delicacy of the Italians both in vocal and instrumental Music." To the conclusion of this period, few of the present patrons of Italian Music, or even the exclusive admirers of Rameau, will perhaps subscribe; where he says, that "since the time of Catharine de Medeis, Music in France was brought to the highest perfection possible, by the great genius of the Sieur Lulli, the most celebrated musician we have ever had in our country." Such is the transient state of this art; that as soon as a new style is in fashion, it seems necessary for a country not only to burn all the old Music, but even the books in which it is intemperately praised!

(i) *Il y eut chaque jours des divertissemens nouveaux, qui consistoient en concerts, bal, mascarades, combats à pied et à cheval, joutes, tournois, et generalement tout ce qu'on peut*

*imaginer pour contribuer au plaisir d'une cour la plus magnifique et la plus galante qu'on eut jamais vû en France, dont la depense fut estimée monter à près de quatre millions. Mene-
strier des Representations en Musique, p. 192. & Hist. de la Mus. Tom. I. p. 217.*

A more modern French writer estimates the expence of this fête at 112,000 crowns, equal to six millions of the present French Livres, and £. 250,000 sterling.

(k) My copy, the only one I ever saw, was purchased at the sale of the late honourable Topham Beauclerc's library; and has for title, *Balet comique de la Royne, fait aux nopces de Monsieur le Duc de Joyeuse & Mademoiselle de Vaudemont sa sœur. Par Baltazar de Beaujoyeux, Valet de Chambre du Roy, & de la Royne sa mere. A Paris 1582. Par Adrian le Roy, & Robert Ballard.* The types and paper are equal in beauty to those of Elzevir in the next century. And the Music, though cut in wood, is much more clear and neat than any I ever saw of the kind.

The

The description of this Ballet, which is printed in quarto, dedicated to the king, Henry III. is preceded by innumerable copies of complimentary verses to the author, in Latin and French, all in the *fade* and tumid style of the times on such occasions. In the preface, Beaujoyeux tell us, that “ he had blended together Poetry, Music, “ and Dancing, in a manner, which if ever done before, must have “ been in such remote antiquity, that it may now well be called new; “ as the ancients never recited verses without Music, so Orpheus “ never played without song. I have, however, given the *first place* “ to DANCING (1)”, says he, “ and assigned the second and third “ to Poetry and Music, in order to gratify at once the eye, ear, and “ understanding.”

And this seems the origin of the *Ballet Heroique*, as well as *Ballet Historique*, in France; where Dancing has been long more successfully cultivated than elsewhere, and where it still holds the *first place* on the stage. It would be a vain imagination now to expect any Musical Drama to succeed in France without Dancing, either *analogue*, or *en divertissimens*; interwoven in its texture, or introduced between the acts. And, unluckily for Music, the theatres, in other parts of Europe, have so far adopted the *Costume* of the French stage, that no Opera, however excellent in poetry, composition, and performance, can support itself without the aid of such splendid ballets as double the expence of the exhibition. Indeed, it has for some time seemed probable, that *singing* at the Italian Opera, in England, would soon be so totally neglected and forgotten, that posterity would only know by tradition that it had ever constituted the principal part of such an amusement. At some future period, not very distant perhaps, somebody or other may be *bold* to say, that “ there “ used formerly, as I have been told, to be *singing* at the Opera;” which the fine gentlemen of the time, who only enter the theatre for the *Dance*, and constantly to the great comfort of lovers of Music who are near them, retire into the Coffee-room when it is over, will find it difficult to believe.

(1) *J'ay toutefois donné le premier tiltre & honneur à la DANCE, &c.*

When

What the Dancing at the superb and costly fête, described by de Beaujoyeux, may have been, I know not; but of the Music, which is printed, we are enabled to judge: and, upon scoring a great part of it, both vocal and instrumental, I find it very contemptible, even for the time when it was composed. The counterpoint, indeed, is not incorrect; nor can the French be justly accused of ever being deficient in the mechanical rules of composition, since they were first established; but for fancy, air, and rhythm, there is not a passage in this whole performance, except in a few of the dances, by which we are reminded of their existence (*m*).

In the Operas of Lulli and Rameau, the Music of the dances was always infinitely more admired by foreigners than that which was sung; because it was necessarily more marked and accented: that is, in what was danced, *some* determined measure and movement was always perceptible; but this was so little the case in what was sung, that it is related of Faustina, the celebrated singer and wife of Haffé, that in her way through Paris to England, being carried to the serious French Opera, she remained silent there full half an hour, and then cried out, “but when shall we have an air (*n*)?” So confounded were airs and recitatives together, at this theatre, it was a natural enquiry for an Italian to make. But had this excellent performer heard the Music to de Beaujoyeux’s Balet, which was composed long before the invention of *recitative*, she might have asked the same question; for there is in it nothing that resembles an air, or which seems to imply a selection of notes, or to suggest a reason for one sound being higher or lower, quicker or slower, than another.

(*m*) It seems as if Dancing could not subsist without a marked measure; indeed, when Poetry is sung to sounds without measure, it becomes worse than prose. In the same year that this Balet was performed at Paris, a book was published at Venice with the following title: *Il Ballerino di M. Fabritio Carosoda Sermoneta, diviso in due Trattati; con Intavolatura di Liuto, & il Soprano della Musica nella sonata di ciascun Ballo*, 1581. The tunes for all these dances, though not very beautiful in other respects,

are well accented, phrased, and divided into an equal number of bars, with as much symmetry as those of the present times. And there is a circumstance attending this publication of importance to a musical historian, which is, that the pulsations of the measure throughout the Music of these dances, are regularly *barred*, which is not the case with that of *Le Balet de la Royne*, nor with any Music of the sixteenth century that I have seen.

(*n*) MS. papers of M. Diderot.

It must be remembered, that the Music of this old French Ballet was not composed by Baltazarini, the Italian, who only acted as Ballet-master on the occasion, but by Messrs. de Beaulieu, and Salmon, of the king's band, whom his majesty had ordered to assist him in composing and preparing all that was *most perfect* in Music for this festival; "and M. Beaulieu," says Baltazarini, "whom all professors regard as an excellent musician, has, on this occasion, even surpassed himself, assisted by Maître Salmon, whom M. Beaulieu and others highly esteem in his art."

The instruments employed in the performance of this Music were *des orgues, douces* (*douces*). In the vault, or roof of the building, were placed *ten bands of Music* (*dix concerts de Musique*) of different kinds, which were to serve sometimes as echos to the singers; by which is meant the players of the Ritornels, or Symphonies of the vocal airs. There were other performers for the interludes, or pieces between the songs (*o*).

Of the excellence of this Music a judgment may be formed by the specimens on the following plates. And to convince the musical readers of the wretched state of melody at this time in France, it will be sufficient to present them with the two *Solo verses* p. 281 and 282. in writing which, the inventor had not even the embarrassment of a base to check his fancy; and yet, it does not seem possible to produce a more unmeaning melody by any other arrangement of the same notes.

Dix Violins are said to come in, five of a side, *pour jouer la premiere entrée du Balet*. These violins seem merely introduced to play to the dancers, without being suffered to accompany the singing, or join in the concerts or symphonies. The only fragment of tolerable melody, which the whole book can furnish, is what Baltazarini calls *un son fort gay, nommé la Clochette* (*p*).

(*o*) The instruments mentioned are hautboys, cornets, sacbouttes, *violoncelli*, lutes, lyres, harps, flutes, and le flageolet, played by le Sieur Juvigny, its original inventor.

(*p*) In scoring the dances, in five parts, they suggest a reason for the *accent* appearing stronger in them than in any other old French Music; which is, that they are al-

most all in simple counterpoint, of note against note, which prevents confusion in the measure, and gives energy to every passage that is well phrased by the composer. There are a few passages in the other dances in gavot time, which afterwards became common throughout Europe.

EXTRACTS

Extracts from **LE BALET COMIQUE DE LA ROYNE**, Published by **BALTASAR 279**
DE BEAUJOYEULX, 1582, one year after the Performance. The Music was
 Composed par les Sieurs **BEAULIEU ET SALMON**, by command of his Ma-
 -jesty King Henry III of France, on occasion of the Nuptials of the Duke
 DE JOYEUSE.

Le Son de la clochette, auquel Circe fortit de son Jardin.

I have dwelt the longer on this performance as it is the only French Theatrical Music extant of the time. And in comparing it with that of Lulli, it appears that he did not disdain to comply with the national taste, which had been long established, with respect to measure and melody: he certainly added much to both, but conformed to the *Genre*.

Francis Eustache DU CAURROY, born 1549, was the most celebrated musician of his time; being called by his contemporaries *le prince des professeurs de Musique*, the prince of musicians. He was Maestro di Capella to Charles IX. Henry III. and IV. Canon of the Holy Chapel at Paris, and Prior of *S. Aioul de Provins*. This composer was very much beloved by the learned and elegant Cardinal du Perron, who not only wrote verses frequently for him to set to Music, but, after his decease, 1609, honoured his memory with an epitaph, which is inscribed on his tomb, near the pulpit of the Church *des grands Augustins* (q).

This tomb is said to have been erected by the successor of du Caurroy, Nicholas Formé; and an act of generosity and goodness of heart, so uncommon, deserves to be recorded, however difficult it may be to produce testimonies of his musical abilities.

I am sorry that the compositions of du Caurroy do not correspond with the expectations which his great patron and panegyrist has excited, or with those which Merfennus encourages, when he proposes it as a problem of difficult solution, whether Claude le Jeune or du Caurroy was the best composer? I have scored one of his canons which is given as a miraculous effort of genius, and said to be in six parts, though three of them are mere *remplissage*, that have nothing to do with the subject, and I find it miserable (r).

It

(q) In this epitaph it is said, in the flourish of friendship and monumental praise,
 — quem virum, nec Hispania,
 Nec Gallia, nec Italia modo, sed omnis
 Europa, Musicorum principem, invidia
 Admirante, confessa est —

but in all my musical reading and enquiries I have never found that either his name or works had penetrated into Italy, Germany, or England. It has perhaps with as little truth been said by the panegyrist of our Dr.

Blow, that his compositions had been sung at St. Peter's Church in Rome. It must be owned, however, that the praise we bestow on our old ecclesiastical composers, Tallis and Bird, the contemporaries of du Caurroy, though less splendid and extensive, is somewhat more sincere and solid; for we still continue to perform their works in our cathedrals.

(r) There are no people in the universe so grateful to their musicians as the French; not

It is observed, by the author of *Essay sur la Musique* (s), that none of Caurroy's works remain, except a *Mass for the dead* for four voices, without accompaniment; "of which," says he, "it is impossible to judge, being in *perpetual* (meaning, perhaps, plain) counterpoint, and composed in square notes, like plain-chant." It is hardly possible to suppose this learned musician is not able to read square notes, or to judge of the perpetual counterpoint, if he had thought it worth studying. And it is unlucky that he was unable to find a work called *Melanges de la Musique de Eustache du Caurroy, Maître de la Musique de la Chappelle du Roy*, published at Paris by his nephew André Pitart, and dedicated to the Duc de Bouillon, 1610; because, he would there have found the very *Noëls*, or Christmas Carols, which have only arrived at his knowledge by tradition (t). It does not, however, appear that they contain many pretty *melodies* or *minuets*.

The *Fantasies* are extremely dry and destitute of ideas; many of them being only *Discants* upon hymn tunes, used as themes or *Canto-fermo*, like those of Claude le Jeune in his *Dodecachorde*, but less ingenious and pleasing.

The following *Noël*, or Carol, is the most pleasing composition that I have been able to find in this collection.

so much perhaps for the love of the art, or abilities of the artists, as the honour of their country; and it seems on this principle, that long after their performance is forgotten, and every vestige of their productions annihilated; when their genius and talents rest so entirely on tradition, that to furnish specimens of composition by Orpheus and Amphion would be scarce more difficult; still making the most of the faint whispers of Fame, they augment their force by uttering them through her *Stentorophonic Tube*, or *speaking-trumpet*, till they become audible to all mankind. Indeed, their writers, like the ancient monks of *Psalmody Island*, in the diocese of Nismes, who vowed *eternal praise, laus perpetua*, never let a single circumstance, which will reflect honour on their country, remain a moment unsung.

(s) Tom. III. p. 403.

(t) *C'est une tradition généralement répandue que nos Noëls, tant connus et tant chantés étoient des Gavottes et des MENUETS, d'un Ballet que du Caurroy avoit composé, pour Charles IX. Si cela est, outre le Talent du Contrepoint, il avoit celui de composer de Jolis Chants.* Ib. There certainly is not one minuet or single movement in *triple-time* throughout the *Melanges*, which are now before me, and consist of *Noëls, Hymns, Chansons*, and *Fantasies* to the number of thirty. Nor is it easy to prove, that the dance called a *Minuet*, (*Menuet* Fr.) was invented so early as the reign of Charles IX. at least no such term appears in any Glossaries of the times. Cotgrave defines *Menuet* "a sweet apple that yields excellent cyder."

JAKUES MAUDUIT is said to have been a great musician in the time of Henry IV. who accompanied wonderfully on the Lute (u). We are likewise told, that he added a sixth string to viols, which had originally but five; and that he was the first in France who introduced these instruments in concert, instead of base-viols (x).

Pere Merfenne, who had a particular regard for this musician, has given us an engraved head and eulogium of him in his *Harmonie Universelle* (y); with the chief part of which I shall present the reader, and then close my account of the Music and Musicians of France, during the sixteenth century.

“ Jaques Mauduit, descended from a noble family, was born 1557.
 “ He had a liberal education, and travelled during his youth into
 “ Italy, where he learned the language of that country, together
 “ with Spanish and German, which, with the literature he had ac-
 “ quired at college, enabled him to read the best authors of almost
 “ every kind. He had a general knowledge of most sciences as-
 “ well as of mechanics; and studying Music with unwearied dili-
 “ gence, without any other assistance than that of books, he ren-
 “ dered himself so eminent that he was honoured, even during his
 “ life, with the respectable title of *Pere de la Musique*,” Father of
 Music. “ And with reason,” says his panegyrist, “ being the in-
 “ ventor of good Music in France, by the many excellent works he
 “ published, both vocal and instrumental, which have been long
 “ the ornament of our concerts.

“ His merit obtained him admission into the famous Academy
 “ of Music, instituted by the learned Baif, 1583; and many wri-
 “ ters of his time seem to have produced their poetical effusions,
 “ in order to have them immortalised by the airs of Mauduit.

“ The first composition in which he distinguished himself as a
 “ learned harmonist, was his Mass of *Requiem*, which he set for the
 “ funeral of his friend, the celebrated poet Ronsard; it was after-
 “ wards performed at the funeral of Henry IV. and, lastly, at his
 “ own, 1627, under the direction of his son Louis Mauduit, at

(u) *Essai sur la Musique*, Tom. III. p. 519. *generale.*

(x) *Harm. Univers. de Merfenne*, pref. (y) *Liv. 7. des Instrum.* p. 63.

“ which

“ which time Mersennus officiated in the sacred function, as priest.

“ He left behind him innumerable masses, hymns, motets, fancies, and songs. A small hereditary place at the court of requests descended to him from his father, which he seemed to exercise for no other purpose than to oblige and serve his friends. At the siege of Paris, when the Fauxbourg was taken by storm, he ventured through the victorious soldiers to the house of his friend Baif, then dead, and saved all his manuscripts, at the hazard of his own life.

“ Upon a similar occasion, in which there was still greater difficulty and danger, he saved the *douze modes* de Claude le Jeune, and his other manuscript works, at the time that this composer was seized at the gate of St. Denis, as a Hugonot; so that all those who have since received pleasure from the productions of this excellent master, are obliged to Mauduit for their preservation, as he saved them from destruction by seizing the arm of a serjeant at the very instant that he was going to throw them into the flames; persuading the soldiery that these papers were perfectly innocent and free from Calvinistical poison, or any kind of treason against the League: and it was by his zeal and address, with the assistance of an officer of his acquaintance, that Claude escaped with his own life.”

Such are the praises bestowed on Jaques Mauduit, by his friend the learned and benign Mersennus, whose diligence, science, and candour, far surpassed his taste. The *Requiem*, by Mauduit, is printed in the *Harm. Univ.* in five separate parts; but in scoring it, neither the harmony nor modulation offer any thing that is either curious or uncommon, at any period of counterpoint. It is in literally *plain* counterpoint of crotchets and minims moving all together, as in our cathedral chanting. The chief merit of this production is in the exact accentuation of the words, *à l'antique*: a minim for a long syllable, and a crotchet for a short.

Mersennus, in his Commentary on Genesis, has illustrated his musical remarks with many of his friend Mauduit's compositions, whence I have not been able to extract the least fragment that will do honour to this composer, or his country.

CHAP.

C H A P. V.

Of the Progress of Music in Spain during the Sixteenth Century.

IT seems as if the Spaniards were placed lower among European musicians at this time than in equity they ought, by those who imagine *Morales* to have been the *first* practical musician of eminence in that country, and *Salinas* the *only* theorist that was produced there during the sixteenth century. Indeed, we know but little of the state of Music in the interior parts of that kingdom during this period; but, if we may judge by the musicians it furnished to the Papal Chapel, both composers and singers, we may conclude, that the richest and most powerful nation in Europe, as Spain then was, would not breed musicians as the Africans do slaves, or the Circassians women, merely to transport them for the use or pleasure of others; they could doubtless then have afforded to keep a few for their own amusement.

The Spaniards, so far from neglecting Music, seem to have taken it very early into the circle of the sciences in their universities; for *Salinas* tells us (z), that the musical professorship, which was conferred upon him at Salamanca, had been founded and endowed by *Alfonzo*, king of Castile, surnamed the Wise (a). And *Bartolomeo Ramis*, the opponent of *Franchinus*, in 1482, we have already seen (b), was public professor of Music at Toledo, and afterwards at Bologna. Of *Guillerm de Podio*, a priest, we have likewise a work entitled *Ars Musicorum, sive Commentarium Musicæ Facultatis*, published 1495, and another written in the Spanish language, by *Francesco Trovar*: *Libro di Musica Pratica*, Barcelona, 1519. *Arte di Canto Llano*, del *Alfonso de Castillo*, Salamanca, 1504. *El Maestro o Musica de viguela de mano*, by *Don Ludovicus Milan*, a

(z) *De Musica, in præf.*

the Alphonsine Tables had their name.

(b) *Supra*, p. 155.

nobleman of Valentia, 1534. *Silva di Sirenas*, or a treatise on the *Vitruela*, or viol, by Henrico de Valderrabano, Valladolid, 1547. *Arte de la Musica*, by Melchior de Torres, alcala de Herraes, in New Castile, 1554. At the same place likewise was published, in 1557, *Tratado de Cifra nueva para Tecla, Harpa y Vieguela Canto Llano, de Organo y Contrapunto*, by Lud. Venegas de Hinestroia. There was likewise published at Alcala by Cyprian de la Huerga, a Cistercian monk, who died 1560, a treatise *De Ratione Musicæ et Instrumentorum usu apud veteres Hebræos*; and, at Granada, 1555, *Libro de la Declaration de Instrumentos*, by Joan Bermudo.

All these writers on the subject of Music, and many more, appeared in Spain before Salinas; of whom, and of his treatise, in consideration of its scarcity, as well as the great reputation he acquired as a theorist, it seems necessary to give a more ample account.

FRANCIS SALINAS, a native of Burgos in Spain, was blind from his infancy, having, as he says, sucked in that calamity with the infected milk of his nurse. His parents, soon perceiving that the study of Music might be pursued by him in spite of this misfortune, had him taught very early to sing, and play upon the organ. It was by mere accident that he acquired any knowledge in the learned languages; for while he was a boy, a young woman, celebrated for her knowledge in the Latin tongue, and who was going to take the veil, having a great desire to learn to play on the organ, came to his father's house, and, in return for the lessons which she received from Salinas in Music, taught him Latin. After this, he was so eager to pursue the study of literature, that he prevailed on his parents to send him to Salamanca, where, during some years, he applied himself closely to the study of the Greek language, philosophy, and the arts in general (c). But being unable to support himself longer in that university, he was introduced in the king's palace to Peter

(c) Dr. Smith, who seems never to have seen Salinas's treatise on Music, though he quotes it, says that "after his return into Spain, he applied himself to the Latin and Greek languages, and caused all the ancient musicians to be read to him, &c."

Harmonics, p. 50. 1st Edit. It is not, perhaps, of much consequence, whether Salinas studied the learned languages in youth or age; but inaccurate assertions on one subject, throw doubts upon others.

Sarmentus, archbishop of Compostella, who received and treated him very kindly, and who being soon after created a cardinal, carried Salinas with him to Rome. Here he had not only an opportunity of conversing with the learned, but of consulting ancient manuscripts, particularly those on Music, in the Greek language, which have been since collected and published by Meibomius and Dr. Wallis (*d*). In these studies he spent thirty years; when the death of his patrons, Cardinal Carpenfis, Cardinal Burgos, and the Viceroy of Naples, by whom, he says (*e*), he was more beloved than enriched, determined him to return to Spain, and pass the remainder of his days in humble obscurity; but, on his arrival at Salamanca, he was appointed public professor of Music, and read lectures in that university both on the theory and practice of the art. However, by his long study of Boethius, as well as the ancient Greek theorists, his doctrines seem to have been chiefly speculative, and confined to calculations of ratios, divisions of the monochord, systems of temperament, and the musical pedantry of the times, without bestowing a thought upon harmony, modulation, or even melody; except such as the ecclesiastical modes and species of octave supplied.

However, the treatise upon Music written by Salinas is not only scarce, but, on many accounts, valuable; as it is written with clearness, by a practical musician, who satisfactorily explains several parts of ancient Music, which, though of little use to the modern, will at least gratify the curious; and though he treats of sects and subtilities, concerning which the present students either in the theory or practice of the art, are not much interested; yet as the curiosity of some enquirers is boundless, and as the doctrines now exploded or contemned are here collected into a point, those who fancy they can be amused or instructed by the perusal of such discussions, will think themselves in possession of a great literary treasure, when they are so fortunate as to find this work, which has for title, FRANCISCI SALINÆ *Burgenfis, abbatis Sancti Pancratii de Rocca Sca-*

(*d*) *Antiq. Mus. Auct. septem*, Amst. 1652.
Claud. Ptol. Harm. & Man. Bryennii, Lond.

1699.

(*e*) *In Præf.*

legna in regno Neapolitano, et in academia Salmanticensi Musicae professoris, de Musica libri septem, in quibus ejus doctrinae veritas tam quae ad Harmoniam, quam quae ad Rhythmum pertinet, juxta sensus ac rationis indicium ostenditur, et demonstratur. Salamanticae, 1577.

The first book, containing twenty-eight chapters, is merely speculative, treating of nothing but the different methods of calculating the ratios of sound; and of arithmetical, geometrical, and harmonical proportion. Second, Definitions of sound, intervals, concords perfect and imperfect, and discords; greater and less tone and semitone, the diesis, apotome, limma, and comma; twenty-nine chapters: in one of which he takes up the gauntlet in defence of the 4th being a concord, which practical musicians had then but lately began to rank among discords (*f*). Third, treats of the three genera, diatonic, chromatic, and enharmonic, such as were used by the ancients; for the moderns have no chromatic strictly ancient, nor enharmonic of any kind (*g*). He says nothing of the major or minor modes or keys in present use, which are more the business of a modern musician than the chromatic or enharmonic of the ancient Greeks and Romans. It is in this book that the author has incurred the displeasure of the Abbé Roussier, by treating of the different methods of correcting false consonances and intervals by *temperament* (*b*). Fourth, chiefly treats of the different species of diapason and octave; of the hexacords, said to have been invented by Guido, and of their correspondence and connexion with the tetrachords of

(*f*) Salinas says, that he had with pleasure often heard it used in the Greek church at Naples; and that the prince of all contrapuntists, Josquin des Pres, in the beginning of the verse *resurrexit*, of two parts only, in his *Mass sur l'Homme Armé*, in the 6th tone, has used it naked and unaccompanied by any other interval, which he would not have done, if he had regarded it as a discord.

(*g*) Dr. Pepusch has asserted, in his letter to M. de Moivre, that Salinas had discovered the true *enharmonic* genus of the ancients. How much it is to be lamented that neither Salinas nor Dr. Pepusch has obliged the

longing world with enharmonic compositions in counterpoint, to confirm their converts in the faith, and not only renovate, but extend the use of this long lost genus! As it is, the discovery of Salinas, and positive assertion of Dr. Pepusch remain, to vulgar ears, as useless, and as much matters of faith, as the Music of the spheres.

(*b*) *Essai sur la Musique*, Tom. III. p. 366. *Temperament* was probably not a thing of choice with Zarlino or Salinas; but an expedient to obviate the greater imperfections which would accrue to harmony, by partial perfection (all that can be attained), on fixed instruments.

III. 10Vthe

the Greeks, Of the ancient modes or tones of Aristoxenus and Ptolemy, of the doctrines of Pythagoras, Aristoxenus, and Boethius; all which he freely censures. The participation or equal division of semitones by Aristoxenus, defended. The doctrines of Didymus, Ptolemy, Bryennius; and of the more modern theorists, Faber, Franchinus, Glareanus, Fogliano, and Zarlino; thirty-three chapters: in the last of which there is an encomium upon Zarlino, and an epitome of his writings.

The fifth, sixth, and seventh books chiefly concern rhythm, and the feet of ancient Greek and Roman verses; all these he has expressed in musical notes; and though he uses only two kinds, the semibreve and minim, for the long and short syllables, the variety of measure arising from this mixture is wonderful! These four

sounds only  affording thirty-four different

mutations of measure, in the arrangement of long and short notes and syllables. Salinas seems of opinion, that the ancients had no Music strictly instrumental; but that all melody was originally derived from the different order of syllables in versification, and had been first set to words, before it was played by instruments; and this was the opinion of the late Rousseau (i). Even for the movement and measures of dance-tunes, such as the pavan and passamezzo, he finds corresponding Latin and Spanish verses; and the most curious parts of these last chapters, to me, are the little fragments of old Spanish melody, which belong to his specimens of versification. Some of them are very graceful and pleasing, particularly those in triple time, which resemble the Neapolitan measures more than any other in present use. I shall exhibit here, to the musical reader's view, characteristic fragments of several kinds of Latin and Spanish metre, in notation.

Old Song, on the Expulsion of the Jews.

E-a Judeos a en-far-de-lar Que m ndan los Reyes que passeys la mer.

Like the Pastoral in Corelli's VIII. Concerto.

Mi grave pe-na crece de con-go-xa, mi bien af-flo-xa, mas no mi ca-

de-na, Muero de Amores, vivo con do-lo-res fe me con-de-na.

It must be remembered, that melody had at this time received no polish at the Opera, and that these are mere elementary sounds, of one

one note to one syllable, which obscure not the meaning of the words by lengthened tones or refinements. Such Music, in plain counterpoint, be the parts ever so numerous, would never impede articulation, or disguise poetry. This seems the kind of composition that would be the most likely to satisfy those musical *Purists*, who are equally displeased with florid counterpoint, and metrical psalmody; accusing the one of taking too great liberties with the words, and the other of making no distinction of syllables.

Salinas is said to have been an admirable performer on the organ; an instrument which seems peculiarly happy in its construction for the display of great musical talents, after the privation of sight: for not only Salinas, but Francesco Cieco, the first great organist upon record; Pothoff, the late excellent organist at Amsterdam; and our own Stanley who delighted the lovers of that instrument more than fifty years, seem, with respect to their performance, rather to have gained than lost by this calamity. Milton, we are told, could amuse *himself*, and Handel, we know, had the power of delighting *others* upon this instrument, after total blindness, though it came on late in life.

Salinas died in 1590, at seventy-seven years of age.

The writers already enumerated, sufficiently prove that the *theory of Music* has not been neglected, though it has been thought “not to have been at all cultivated in Spain before the time of Salinas;” and the number of composers and singers of that country, who were employed in the Pontifical Chapel at Rome only, if all inserted here, would furnish a list of Spanish musicians so far from *scanty*, that few readers would have patience to peruse it; for before the year 1600, when, according to Santarelli, *Castrati* were first employed in the service of the Papal Chapel to sing the soprano or highest part, it was the custom to have it performed by Spaniards in Falset (*k*).

Near

(*k*) Du Cange derives the word *Falset* from *Fausetum*, a term used, during the middle ages, in the same sense; and this, he supposes, from *faucibus*, whence the high tones of voice proceed. *Pipeth* was sometimes used in a similar sense to express *piping*, or

such high singing as imitated the sound of pipes or small flutes. These *feigned voices*, as we should call them, seem to have been much in request, for the treble parts of vocal compositions, at the beginning of the last century, when women were not allowed to sing;

Near twenty of these are named from the records of the Chapel by Adami (l); and among these some were learned musicians, and excellent composers. Salinas speaks of ESCOBEDO as a profound theorist; and we have already had a proof of the high opinion that was entertained of his science at Rome, by the choice that was made of him, as an umpire, in the musical dispute between Vicentino and Lusitano (m); and the works of D. CRISTOFERO MORALES were celebrated and published all over Europe, from the year 1540 to 1564. He preceded Palestrina, who was not twelve years old when Morales first appeared as a composer. Several of his productions were published at Venice, among those of Costanzo Festa, Adrian Willaert, and Arkadelt, with whom he was cotemporary, besides the following works, to which no other name was prefixed than his own.

Two books of masses, the first for five voices, the second was dedicated to Pope Paul III. for four, 1544, Venice. *Magnificat 8 tonorum*, 4 voc. Ven. 1562. *Lamentationes Hieremiæ*, 4, 5, & 6 vocum, Ven. 1564. Adami (n) tells us that his famous motet, *Lamentabatur Jacob*, which was preserved in the archives of the Pontifical Chapel, at the beginning of the present century, and annually sung on the first Sunday in Lent, is a wonderful composition (o).

Several of his motets were published at Venice 1543, among the *Motettæ trium Vocum ab pluribus Authoribus composta**; the style of

sing; as appears from a letter written by the celebrated traveller Pietro della Valle, to Bapt. Doni, of which more notice will be taken hereafter.

Lodovico Falsetto, Gio. Luca Falsetto, Giuseppino Tenore, and Melchior Basso, singers mentioned in this letter, had their cognomens from their species of voice. Singing in *falsset* had very early admission in the Church, during times of *Discant*.

(l) Such as Bartol. Escobedo, Ant. Calafans, Ernest Bultezo, Francesco Palavera, Cristoforo Morales, Juan Sanchez, Fran-

cesco Bastamente, Juan di Figueroa, T. Gomez di Palenza, Juan di Pareds, Fran. di Priora Toletano, Fran. Sottoda Langa, Juan Pantos Toletano, Diego Vasquez di Conca, Fran. Spinosa, Tomaso Lod. da Votteria, and Diego Lorenza, who were all Spaniards employed during the sixteenth century.

which

which, though learned for the time, is somewhat dry, and the harmony, by his frequent use of unaccompanied 4ths and 9ths, uncouth and insipid; yet, till supplanted by the more pleasing works of Palestrina, his compositions were in very high favour at Rome, in the Papal Chapel, where he was a singer during the Pontificate of Paul III.

TOMASO LODOVICO DA VITTORIO, another Spanish performer in the Pope's Chapel, and an excellent harmonist, was the first who published, in a very large size, *Motetti*, for all the festivals throughout the year, in separate parts, on two pages facing each other; the notes were so large, that four, and frequently eight fingers, performed their parts out of the same book. Kerl afterwards printed masses in the same manner; and at Milan, in the year 1770, I saw the whole choir, at the Duomo in that city, sing a mass from a book of this kind (p). The *Motetti* of Vittoria, which are preserved in Dr. Aldrich's Collection at Christ Church, Oxford, were printed at Rome, 1585. The author was Maestro di Capella to the Church of St. Apollinare in that city, before his admission into the Papal Chapel; and, among other works, published masses, in 1583, which he dedicated to Philip II. king of Spain. His burial service, or *Messa de' Morte*, was much celebrated about this time, as were his penitential psalms. Peacham, who styles him "a very rare and excellent author, whose vein was grave and sweet," tells us, that he quitted Rome, and resided at the court of Bavaria, about the year 1594. Our countryman distinguishes, among his French songs, *Susane un jour*, which Orlando, and several other eminent composers, of these times, had set.

The works of *Guerrero* of Seville, *Flecha* of Catalonia, *Ortiz* and *Cabazon* of Madrid, *Infantas* of Cordova, *Duran* of Estramadura, and *Azpilcueta* of the kingdom of Navarre, appear in the musical catalogues for the sixteenth century of Italy, the Netherlands, and Spain (q). And this list might be swelled, for the honour of Spain,

(p) See *Present State of Music in France and Italy*, p. 88.

(q) Vide *Antonii Bibl. Hispanam*.

with many more sonorous names of composers and performers of that kingdom, who had contributed to the delight of several countries in Europe, besides their own; but a sufficient number has already been specified to acquit the Spaniards of the charge of having made a *slow progress* in an art, which, at this time, and indeed at all times, is so connected with the language, poetry, and general civilization of a country, that it is often regarded as a mark of barbarism to have neglected its cultivation.

C H A P. VI.

Concerning the Music of the Netherlands during the sixteenth Century.

THE abilities of John Tinctor, John Okenheim, Jusquin des Pres, Jacob Hobrecht, John Mouton, and Adrian Willaert, the first great luminaries and founders of this excellent School of Counterpoint, have been already celebrated in the course of this work, and specimens given of their style. Flemish and French musicians are so constantly confounded by the natives of France in their musical writings, that few readers are able to separate them. And yet the list which Lodovico Guicciardini (r) gives, in 1556, of the great musicians, natives of the Netherlands, who were then dispersed all over Europe, robs the French of many eminent masters, whom they have long accustomed themselves to regard as their countrymen.

The French in writing upon Music, contrary to their custom on other occasions, forgetting the conquests of Louis le Grand in Flanders, chuse to regard its inhabitants as having been *always* under the dominion of France; but the most complete refutation of this opinion is the book of Guicciardini itself, and the charts annexed, all dedicated to the emperor Charles V. at that time sovereign of the towns which gave birth to the musicians in dispute.

But as this subject has been discussed in the second volume (s), a more minute scrutiny into the claims that the French may have to musicians which the Netherlands produced in places under the dominion of Spain, or the house of Austria, during the fifteenth and sixteenth centuries, would perhaps appear invidious; and as I am seeking musical talents, wherever I can find them, without any other wish than to restore them to the right owners; after specifying the place of each musician's birth, when it can be ascertained,

(r) *Descrit. de' tutti i Paesi Bassi*, p. 42.

(s) Page 448 and 449.

I shall leave the right of appropriation to be settled by the French and Netherlanders themselves: only first observing, that as the French never scruple allowing the *Flemish School of Painting* to be different from their own, it seems as if the same distinction should be admitted with respect to *Music*, at least, during the times under present consideration.

The great musicians which Flanders and the Netherlands produced, after Jusquin, Obrecht, and Willaert, of whose compositions many still remain, are the following: Verdelot, Gombert, Arkadelt, Jacket Berchem, Canis, Courtois, Clement non Papa, Crequillon, Giaches de Wert, Pevernage, Verdonk, Baston, Waelrant, Lupus Lupi, Richafort, Manchicourt, Philip de Monte, Cipriano de Rore, and Orlando di Lasso. To these might be added Claude Goudimel, and Claude le Jeune, who were neither of them born in France; but as the greatest part of their lives was spent in that kingdom, where they likewise died, an account of these celebrated musicians and their works have been already given in a preceding article.

VERDELOT seems to have been best known in Italy; for though Rabelais mentions him among the musicians of his acquaintance in France, I find his name and works more frequently in Italian catalogues and books than in any other (*t*). He is frequently cited by Zarlino, Pietro Pontio, and others, among the best composers of his time, which was about the middle of the sixteenth century; I have, however, scored several of his productions, which are always to Latin or Italian words; but, though the harmony is pure, I find no characteristic excellence in any one of them that inclines me to give it a place here. The same may be said of such of the works as I have seen, of *Giaches de Wert*, *Lupus Lupi*, *Philip de Monte*, *Peverinage*, *Waelrant*, and *Verdonk*, all composers, *à dozzina*, who flourished about the middle of the same cen-

(*t*) The only time that I have met with his name in any Tramontane publication, is in a tenth book of French Songs, printed at Antwerp, 1544; where, to a long vocal

composition, called *la Bataille*, à 4, de Clement Jannequin, a fifth part is added of Philip Verdelot. See above, account of this composition, p. 259.

tury; but it would be great injustice to several other cotemporary contrapuntists of the Netherlands not to endeavour to revive the memory of their abilities.

Among these some distinction is due to NICHOLAS GOMBERT, a scholar of Jusquin, who has been already mentioned (*u*), but not with sufficient respect; for in scoring more of his numerous works, I find him a great master of harmony, and a disciple worthy of his illustrious master. He is claimed by French writers as a native of France; but both Lod. Guicciardini and Daniel Federman, in their descriptions of the Netherlands, rank him among the musicians of that country. He was long Maestro di Capella to the emperor Charles V. and furnished a very considerable portion of almost all the numerous collections of songs and motets that were printed at Antwerp and Louvain, during the middle of the sixteenth century; besides a set of masses which were published at Venice in 1541, and two sets of motets, 1550 and 1564, all in four parts. The Museum collections contain a great number of his French songs, in four, five, and six parts.

JACQUES ARKADELT was a scholar of Jusquin, and seems to have spent the chief part of his life in Italy, as the first editions of his principal works were printed at Venice, between the year 1539 and 1575 (*x*).

The number of his motets that was published then, in different collections of the times, is very considerable; but his madrigals were received with such avidity, that four books of them, in four parts, were published at Venice, by Ant. Gardano, in one year, 1541; and his reputation, for this species of composition, was so great in Italy, that, according to Adami (*y*), his name was sometimes prefixed to the productions of others, in order to forward their sale. The following madrigal, which the same writer says was a favourite, is selected from his first book, as a specimen of his style.

(*u*) Vol. II. p. 512.

(*x*) French Songs, *Cantiones Gallicæ*, as Draudius calls them, by this composer, were published at Lyons, 1572, under the

title of *L' Excellence des Chançons Musicales*. 4to.

(*y*) *Osservazioni*, p. 161.

The sudden and unrelativemodulation from F to E $\flat$ in the 6th bar of this Madrigal, which has a very antique effect, seems to have originated from the rule which prohibited the use of the false 5th to the sharp 7th of a key.

Why du Verdier and others have called Arkadelt a Frenchman, I know not: his master, at least, was a Netherlander, and his name has a very Flemish appearance. He was at Venice in the elder Doni's time, and composed chiefly to Latin and Italian words. Whatever country gave him birth, he was an excellent composer; and, for the time in which he lived, his melodies are uncommonly natural, smooth, and graceful.

The works of JACKET BERCHEM, or, as he is called by the Italians, with whom he was in great favour, GIACHETTO, (Berchem being only the name of a village near Antwerp, where he was born), chiefly appear in collections of motets and madrigals, published at Venice; particularly in the first and second books of *Motetti del Frutto*, and *Fior de Motetti*, printed in 1539, by Ant. Gardano, whose name is likewise prefixed to several of these motets, as the composer of them. Berchem's name also appears, with those of the greatest composers in Europe, in the middle of the sixteenth century, in a collection of motets for three voices; *Motetti trium vocum ab pluribus authoribus composita, quorum nomina sunt* Jachetus, Morales, Constantius Festa, Adrianus Wilgliardus, Ven. 1543. These compositions, which are preserved in the British Museum, have a clearness, simplicity, and purity of harmony and design, that have never been exceeded. In the first book of motets by *Cipriano de Rore*, published likewise at Venice, 1544, there is an *Epithalamium*, in the form of a motet for five voices, by Berchem, which, in the elaborate style of the times, is admirable; but his principal productions, to Italian words, were three books of songs, or stanzas, selected from Ariosto's *Orlando Furioso*, set for four voices, and published at Venice, by Gardano, twenty-eight years after the death of that great poet (z). Jacket Berchem, according to

(z) In the commentary of an anonymous author upon the seventy-ninth stanza of the *Orlando Furioso*, lib. xvii. published the latter end of the sixteenth century, is the following remark: "In a musical work, printed in oblong quarto, under this title: *Primo, secondo, e terzo libro del*

Capriccio di Jachetto Berchem, con la Musica da lui composta sopra le Stanze del Furioso, nuovamente Stampati e dato in luce. In Venezia, appresso di Antonio Gardano, 1561; we meet with ninety-three stanzas, selected from different parts of the great poem of our author, among which, p. 66 and 67,

to Walther, who had his information from Federman's description of the Netherlands, was living in 1580.

JOHN RICHEFORT, or RICCIAFORT, is placed by Walther in the *middle* of the sixteenth century; but he was certainly a composer many years before that period, as we find his name not only in the second book of *Motetti della Corona*, published at Fossembrone, 1519, and preserved in the British Museum, in which collection he was author of the fourth motet: *Miseremini mei*; but to a motet in a music-book, preserved at Cambridge, of Henry VIII. when prince of Wales. Glareanus (*a*) says that "great praise is due, in our times, to the vocal compositions of John Richafort." In the Museum collection of French songs, in four, five, and six parts, printed in the Netherlands during the sixteenth century, there is one by this author for three tenors and a base, which, though it would be thought somewhat monotonous by modern ears, has great merit for the artful contexture of the parts, which are moving throughout in close fugue and imitation. The words, indeed, of these old songs are generally as rude and devoid of meaning as those of our own country, equally ancient; this, however, contains a general censure of indiscriminate urbanity.

THOMAS CREQUILON was likewise in the service of Charles V. somewhat later than Gombert. He published a great number of different works, and, among the rest, a mass for six voices in 1556, upon the subject of an old French song: *Mille Regrets*; and, in 1576, a book of *Sacred Songs* (*Opus Sacrarum Cantionum*) for five, six, and eight voices, at Louvain; besides a book of French songs for four, five, and six voices; of which kind a great number, by this author, are contained in different collections, published in the Low Countries, during the reign of Charles V.

Almost all the secular songs, in parts, published in Italy during the sixteenth century, were called *madrigals*; but such as were pub-

"67, instead of the usual seventy ninth stanza, *Tu gran Leone*, &c. are two others."

For this remark I am obliged to my worthy friend Mr. Hoole, the excellent trans-

lator of the three great Italian poets, Ariosto, Tasso, and Metastasio.

(*a*) *Dodecachordon*, p. 288.

lished in the Netherlands, to French words, were only entitled *chansons*; of this kind no less than fourteen sets, of about thirty in each, for four, five, and six voices, were printed at Antwerp between the years 1544 and 1555, by Tylman Susato; and, about the same time, six sets for four voices, at Louvain, by Pierre Phalaise.

As frequent references to these songs, which are preserved in the British Museum, occur in the course of this volume, I shall give the title of the first set of each, at full length.

Premier livre des Chansons à quatre parties, au quel sont contenues trente et une nouvelles Chansons, convenable tant à la voix comme aux instrumentz. Imprimées en Anvers par Tylman Susato, imprimeur et correcteur de Musique, demeurant au dict Anvers, 1544.

Premier livre des Chansons à quatre parties nouvellement composées et mises en Musique, convenable tant aux instrumentz comme à la voix. Imprimé à Lovain, par Pierre Phalaise, l'an. 1553. To most of these sets a patent is prefixed, in French, from Charles V. for three years, in which his titles are emperor of the Romans, king of Germany, Spain, Castile, &c.

Both Susato and Phalaise, the editors of these songs, and of innumerable other publications, were themselves composers: the same may be said of Rhaw of Wittemberg, Gardane and Scotto of Venice, Ballard in France, and Tallis and Bird in England; and there are sometimes pieces inserted of their composition in these collections, which would disgrace none of the authors in whose company they appear.

GIAN LE COICK, or le Coq, is author of several songs in the collections of the times, particularly of one in five parts, that was printed at Antwerp, by Susato, 1545, in the sixth book of *Chansons à 5 et à 6 parties*. In this song, the two upper parts are in canon, in which the second part inverts the melody of the first, while the other three move in free fugue. *Tout à rebours va mon affaire*, is the motto of this canon, and all the information given for the drawing the second treble out of the first. This kind of composition is curious and valuable merely from the difficulty of its construction; for no contrivance can be less amusing, or, indeed, perceptible to
the

the ear, than a constant inversion of the melody at the distance only of a semibreve. In painting, if one or two similar figures were placed with the feet in the air, it would be easily discovered, though the artist would not perhaps much increase his reputation for superior skill. Indeed, this canon is truly a Gothic contrivance, with no other merit than that of *la difficulté vaincue*.

In the same book of songs, there is another instance of patience and pedantry producing a *chef d'œuvre insupportable*; for here is a similar kind of canon in the two *lowest* parts of a five-part song, by JAN CORTOIS, or Courtois, at the distance of two bars: here it is said, that "when one part ascends the other falls," which in old French is expressed thus: *Quant l'un monte l'autre avale*. Great art and labour have been bestowed on this composition to very little purpose; but as genius and invention were not at this time necessary requisites in a musician, it was thought expedient to seek reputation by other means.

CORNELIUS CANIS, however, whose name frequently appears in the Antwerp and Louvain collections of songs, is author of several canons which are not only ingeniously constructed, but of good effect in the performance. Of this kind is the following, from the fifth book, printed 1544, in which all the several parts sing as well as they usually did at this early period of counterpoint, when wholly unrestrained by canon or fugue.

As four of the five parts repeat the subject in the same key, the effect would have been monotonous and insipid, had not this defect been obviated by the canon *ad secundam*, which perpetually varies the modulation, by repeating in a major key, what the upper part proposes in a minor, and *à contra*. The accidental sharps, as usual with the old masters, are omitted in the ancient copy, being left to the divination of the fingers. The passage at this mark †, was the effect of habit and fashion about this time, as it very frequently occurs in all cotemporary compositions; at present the intercalary note would

be inserted, thus:  by which the melody would be more easy to sing, and agreeable to hear.

Lod. Guicciardini tells us that this musician was dead when he wrote his *Description of the Low Countries*, 1556; as was JACOB CLEMENS NON PAPA, an excellent Netherlandish composer, who had been principal Maestro di Capella to the emperor Charles V. Seven books of his motets, in four parts (*Cantionum Sacrarum*), were published after his decease, at Louvain, 1567, as was his *Missa Defunctorum*, 1580. I have found no better Music of the kind than that of this composer; his style is clear, his harmony pure, and every subject of fugue or imitation, simple and natural. In each of the great number of his different works, that I have scored, there is always some excellence; the last, however, that is seen, always appears the best. The parts in his French songs sing better, and the composition is in general more pleasing, and like the best productions of a much later period, than any songs in the same collection (b).

PIERRE MANCHICOURT, a native of Bethune, in Artois (c), and director of the Music in the cathedral of Dornick, who flourished about this time, and whose name frequently appears among the composers of motets and songs, in four and five parts, does not reward lovers of Music for the trouble of scoring his productions so amply as Clemens non Papa, and, indeed, in three or four of them that I examined, he seems not only a dry, but clumsy contrapuntist.

JOSQUIN BASTON, however, of nearly the same period, wrote in a clean and clear manner. We may imagine, by the first of his names, that he was some way connected with the great Josquin; perhaps his relation, godson, or scholar. He was living, according to Lod. Guicciardini, in 1556. A song of his composition was printed in the second book of the Louvain collection, 1559 (d); the words of which would not only serve as a specimen of

(b) *Premier Livre des Chansons à 4 parties*,
Louvain, 1558.

(c) This city was first taken by the French,
1645. *Moreri*.

(d) This must have been the second edition, as the third book in the Museum collection was printed in 1554.

the coarse poetry, but gallantry of the times ; there is, however, a facility, rhythm, and melody in the Music, that was not then very common ; the key too is well defined ; but all the compositions of this period, in the fifth or sixth ecclesiastical mode, which we should now write in F and G major, are the more pleasing to modern ears, on account of the key being ascertained.

In the third book of the Louvain collection of songs in four parts, printed 1554, there is one by PETRUS HEYLANUS, a Netherlander, who either composed but little, or has been very unjustly treated by posterity ; as I find his name no where else. The points of imitation in this song, though airy and familiar, are brought in almost as closely and constantly as if in perpetual canon ; indeed, it would not be easy to find a composition in which more art is discovered, with such seeming facility (*e*). It would occupy more space here than so obscure a composer is entitled to, or I should gladly insert this song, as a curiosity, during the sixteenth century, for melody and close imitation.

JACOB DE KERL, canon of the cathedral at Cambray, was born at Ipres, in Flanders. His compositions, which are chiefly for the church, were published in different parts of Europe, from 1562 to 1573. His masses were printed at Venice, in large folio, 1562. The style in which they are composed is dry and uninteresting ; for though the harmony is good, and the answers to fugues are warrantable, yet the ingenuity and contrivances of a Jusquin or a Palestrina are necessary to keep attention awake, with so little melody and modulation as the strict adherence to the ecclesiastical modes, which was then thought necessary, would allow.

CYPRIAN RORE, or, as the Italians call him, CIPRIANO DI RORE, one of the most voluminous and renowned composers of the sixteenth century, was born at Mechlin, in Flanders, 1516. In the title-page of a book, published at Venice, 1549, he is called the scholar

(*e*) In this composition there is another instance of a flat 7th in the base, to avoid a false 5th, like the passage already remark-

ed in the madrigal of Arkadelt: *Il bianco e dolce cigno*, p. 304.

of Adrian Willaert (*f*). In the preface to the *Canti Carnascaleschi*, published at Florence, 1559, he is called *Cantore*; as if he had been merely a *singer* in the service of the house of Medicis. However, he seems to have spent the greatest part of his life in Italy, as a composer; in which character he is mentioned with great respect by Zarlino, Vincenzo Galilei, Pietro Pontio, and almost every Italian musical writer of his time. And, after having been successively Maestro di Capella to the duke of Ferrara, the republic of Venice, where he was the immediate predecessor of Zarlino, and the duke of Parma, he died at the court of that prince, 1565, aged forty-nine (*g*). His motets and madrigals were first published at Venice, 1544, and again, together with his masses, and many other works, after his decease, in 1562 and 1565. His *Cantiones Sacras*, or motets, were likewise published at Louvain, 1573.

ORLANDO DE LASSO, a native of Mons, in Hainault, born 1520, was the cotemporary of Cyprian Rore, and so much resembled him in genius, abilities, and reputation, that I shall unite them in the same article, and with it close the account of the Flemish and Netherlandish School of Counterpoint. Orlando not only spent many years of his life in Italy, but had his musical education there, having been carried thither, surreptitiously, when a child, on account of his fine voice. The historian Thuanus, who has given Orlando a place among the illustrious men of his time, tells us that it was a common practice for young singers to be forced away from their parents, and detained in the service of princes; and that Orlando

(*f*) *Fantasia e Recerchari à 3 voci, accomodate da cantare e sonare per ogni instrumento, composte da M. Giuliano Tiburtino, da Tivoli, Musico eccellentissimo, con la giunta di alcuni altri recerchari, e madrigali à tre voci, composti da lo eccellentissimo Adrian Vuigliart et Cipriano Rore suo discepolo, &c.*

(*g*) The following inscription still remains on his tomb, in the great church at Parma:

Cypriano Roro, Flandro.

was carried to Milan, Naples, and Sicily, by Ferdinand Gonzago. Afterwards, when he was grown up, and had probably lost his voice, he went to Rome, where he taught Music during two years; at the expiration of which he travelled through different parts of Italy and France with Julius Cesar Brancatius, and at length, returning to Flanders, resided many years at Antwerp, till being invited, by the duke of Bavaria, to Munich, he settled at that court, and married. He had afterwards an invitation, accompanied with the promise of great emoluments, from Charles IX. king of France to take upon him the office of master and director of his band; an honour which he accepted, but was stopped on the road to Paris by the news of that monarch's death. After this event he returned to Munich, whither he was recalled by William, the son and successor of his patron Albert, to the same office which he had held under his father. Orlando continued at this court till his death, in the year 1593, at upwards of seventy years of age. His reputation was so great, that it was said of him: *Hic ille Orlandus Lassus, qui recreat orbem.*

As he lived to a considerable age, and never seems to have checked the fertility of his genius by indolence, his compositions exceed, in number, even those of Palestrina. There is a complete catalogue of them in Draudius (i), amounting to upwards of fifty different works, consisting of masses, magnificats, passions, motets, and psalms; with Latin, Italian, German, and French songs, printed in Italy, Germany, France, and the Netherlands.

To form a comparative idea of the style of these two composers with that of Palestrina, the specific difference seems to be this: that the two Netherlanders, by having spent the chief part of their time in the courts of princes, had acquired a lighter and more secular cast of melody than Palestrina, who residing constantly at Rome, and writing chiefly for the church, had a natural and characteristic gravity in all his productions. Indeed, the compositions *à Capella* of Cyprian Rore and Orlando Lasso are much inferior to those of Palestrina, in this particular; for by striving to be grave and solemn they only become heavy and dull; and what is unaffected dignity in

(i) *Bibl. Class.*

the Roman, is little better than the strut of a dwarf upon stilts in the Netherlanders. They were, however, great masters of harmony, and, out of the church, prepared the colours, and furnished the musician's pallet with many new tints of harmony and modulation, which were of great use to subsequent composers, particularly in dramatic painting.

In the same collection of songs, printed 1555, we have a Latin poem set by Orlando di Lasso in the manner of a madrigal, in which the modulation is curious; but, though elaborate and *recherchée*, it is pleasing, and has had many imitators.

Cyprian and Orlando were the first who hazarded what are now called *chromatic* passages. At the end of the fourteenth book of songs in four parts, printed at Antwerp, by Tylman Susato, there is an irregular Latin ode, by Cypriano, set likewise in the madrigal style, in which not only an A $\sharp$, but an A b occurs in the same movement, and almost every accident usual in modern Music. I shall insert part of this composition, as a specimen of the authors's frequent attempts at *new harmonies* and *modulation*, which, when laid before the learned musical reader in score, will afford him much better information concerning the real history and progress of the art of counterpoint, at this time, than all the catalogues of books, and descriptions of their contents, which diligence and language could furnish.

Many of the forced, crude, and unexpected modulations in the motet of Cyprian Rore, however they may have been admired for their boldness and novelty, were never adopted by subsequent composers. Beautiful, natural, and pleasing passages and effects are soon rendered common by plagiarism and imitation; whereas the unnatural and difficult are long left in the possession of the original proprietor. Perhaps in a series of years some other composer, unable to astonish by his inventions in a natural way, and determined to produce something that shall, at least, *seem* new, will propose them again to the public, who will again reject, and so on, *ad infinitum*. But these musical hunters after novelty, without genius to find it, forget that such passages or modulations must have presented themselves to thousands in the course of their studies and

ricercate, but that good taste and sound judgment had rejected them. It is at all times easy to produce *new* arrangements and combinations of sounds, if nature, grace, and propriety be renounced; but at once to be *new* and *natural*, belongs only to genius of the first order.

The songs in this collection by Orlando, are said by the publisher to be composed *à la nouvelle composition d'aucuns d'Italie*. I find but little melody in any of them, though much modulation, different from the other Flemish masters of this period. There is another essential difference in the notation, as the diminutions into crotchets and quavers, particularly in the songs *alla Napolitana*, are more frequent than in any other compositions of the middle of the sixteenth century. The chromatic accidental semitones are expressed by a sharp, and no longer left to the mercy and sagacity of the finger, as was before the constant custom. The occasional changes in the intervals, which are necessary in counterpoint, though formed upon ecclesiastical melodies, were at first smuggled into harmony, perhaps by fingers whose good ears suggested them, though the composer had not dared to point them out, lest he should be accused of corrupting the modes. Orlando seems the first who, in spite of ancient prejudice and pedantry, when he wished to alter a note, dared to express his intentions in writing. In his more gay and comic style, however, the modulation is overcharged with wanton and unnecessary transitions from one key to another, without remaining long enough in any one to fix it in the hearer's attention.

Of the two following compositions by Orlando di Lasso and Cipriano de Rore, to Latin words, the first is in hexameter and pentameter, and the second, an irregular ode, partly in the choral measures of the Greek tragedies. At this mark $\dagger$, in Orlando's composition, the first A $\sharp$ occurs that I had ever seen used in counterpoint of equal antiquity; and this seems to have been suggested by the words *novumque melos*. Which of these productions was first composed I know not, as they were both published together at Antwerp, 1655.

The madrigals, in general, of both Cyprian and Orlando, to Italian words, are excellent, in the style of the times; but of these there need no examples, after the number of learned and elaborate compositions with which the reader has been presented from the works of their cotemporaries. Wherever *innovation* has been attempted, which tends to a revolution in the art, it seems the duty of an historian to point it out; and the two chromatic compositions have been inserted above, with that intent. Indeed, the laboured and equivocal modulation of these composers, though often learned and ingenious, sometimes borders so much on caprice and affectation as to fatigue the attention, and disgust the ear.

The pedantry of crude harmonies and learned modulation, only suits depraved ears that are grown callous to every thing that is easy and natural. The Italians, when they quitted madrigals, and no longer aspired at the applause of fastidious chamber-critics, whose approbation was bestowed on no compositions that did not smell of the lamp, simplified their secular Music, and instead of puzzling and goading the hearer with complicated contrivances and extraneous modulation, aimed at grace and facility in their melodies, which they clothed with such plain and tranquil harmony, as, instead of disguise and suffocation, added greatly to their energy and effect. Dramatic Music was not yet even in idea, and *concerts*, or other assemblies of gay and unlearned hearers, seem now not to have existed; so that musical composers could not be said to write for the *public*, who will ever prefer such pleasure and amusement as give them the least trouble. Authors of all kinds, who seek for applause, conform to the taste of their judges; and we find, in our own times, that those musicians who are qualified by their genius and abilities to direct and govern the public opinion, think it necessary, however false and corrupt it may be, to humour and flatter it, by all the concessions in their power. The art never long remains stationary at any one point of cultivation; and if perfection could be attained, its reign would inevitably be short. In Music, the learned are few, and silent; the ignorant numerous, and noisy: in the chamber it was right to please the former, and in the theatre, where

“ ———the

“ ———the fair, the gay, the young
“ Govern the numbers of each song,”

there is no choice. A public and mixed audience is such a many-headed monster, that all its ears cannot be pleased at the same time; and whether the good or the bad predominate, the greater number must be gratified at the expence of the less.

Two of Orlando di Lasso's sons, Ferdinand and Rodolph, were able musicians, and both in the service of Maximilian, duke of Bavaria; the eldest as chapel-master, and the other as organist to that prince. These collected their father's motets, as well those which had been published during his life, as those which remained unpublished at his decease, and printed them in a very splendid and sumptuous manner at Munich, in seven volumes, large folio, 1604, with a dedication to their patron the sovereign of Bavaria. The general reception, however, of these compositions, seems not to have equalled the expectations of the editors: other productions had taken possession of the public ear and favour. It is, I fear, in vain to hope for the revival of old Music; too many are interested in the success of the new; and such are the vicissitudes of what are called taste and expression in this art, that if sufficient probity and zeal could be found in fashionable performers to incline them to attempt doing justice to the productions of former times, it is hardly possible for them to succeed; the accent, energy, and expression are either lost in the execution, or unintelligible to the hearers. There is, indeed, as little chance for a musician of the present age to perform such productions in the manner of the times in which they were composed, as to pronounce a foreign language as well as his own; and if, against all calculation, he should succeed, this Music will still be an unknown tongue to the public.

CHAP.

C H A P. VII.

Of the Progress of Music in England from the Death of Queen Elizabeth, till the End of the Seventeenth Century.

J A M E S I.

ELIZABETH, in the early part of her life, seems to have studied Music, and to have made a considerable progress on the Virginals (*k*). Her reign was long, and, in general, tranquil; and in spite of the fanatical spirit of the times, and the outcry of the Puritans against every species of Church-music, except syllabic psalmody, our Cathedral service, by the diligence and abilities of Dr. Tye, Tallis, Bird, Morley, and others, was brought to a pitch of perfection, which was hardly surpassed by that of Italy itself.

This, however, does not appear to have been the consequence of royal munificence; for Elizabeth, though extremely fond of splendour and shew, was so parsimonious in rewarding talents, that she suffered the gentlemen of her chapel, till the time of her death, to solicit in vain for an augmentation of salary, which the difference in the value of money, and way of living since the first establishment of the Chapel-Royal, seemed to have made necessary. And though, among the nobility, the principal professors seem to have met with solid patronage, yet Dr. Bull and Dowland quitted the kingdom in pursuit of better elsewhere.

The accession of JAMES I. to the crown of England occasioned no immediate accession of science, or refinement in the polite arts: as the country he quitted was still less polished than that in which he arrived. Nor does it appear that this prince, either from nature or education, was enabled to receive any pleasure from Music; however, early in his reign, the gentlemen of his chapel, assisted by the influence and solicitation of several powerful noblemen, who plead-

(*k*) See above, p. 15.

ed their cause, severally obtained an increase of ten pounds to their annual stipend.

An entry is made of this event in the cheque-book of the Chapel Royal, signed, not only by five of the great officers of state, but by the subdean, chaplains, and gentlemen of the chapel then living.

Among these petitioners there is but one name, that of Edmund Hooper (*l*), which ever appears afterwards in the lists of musicians eminent for composition or performance, except Bird, Bull, and Gyles, who had distinguished themselves in the preceding reign.

Dr. NATHANIEL GILES, a native of Worcestershire, took a bachelor's degree 1585, and was soon after appointed organist and master of the boys at Windsor. On the death of Hunnis, in 1597, he was appointed master of the children of the Chapel Royal; in 1622, he was admitted to the degree of doctor in Music at Oxford; and on the accession of Charles I. was appointed organist of his majesty's chapel. He was a learned and able musician of the old school, and composed many services and anthems for the Church, which were regarded as masterly productions. Gyles, however, like Ravenscroft, had a strong tincture of pedantry in his disposition, which inclined him to regard with more reverence than they deserved the complicated measures, prolations, augmentations, diminutions, and other dissimular motions of the several parts of polyphonic compositions, commonly called by the reformers *curious singing*. There is extant a lesson of descant by Master Gyles, before he had taken his doctor's degree, of *thirtie-eight proportions of sundrie kindes*. Most of these were become obsolete, unintelligible, and useless, by the general reception of more simple, easy, and modern characters and divisions of time. And it seems as if Gyles and Ravenscroft wished, in pure pedantry, to revive the old perplexities; as Dr. Pepusch, a century later, tried hard to bring us back to the ancient ecclesiastical modes or species of octave. It is difficult to determine which is most injurious to Music, or the greatest

(*l*) This musician was likewise organist of Westminster Abbey, and author of several anthems which are still performed in our provincial cathedrals, as well as one of the

Harmonists who set parts to the edition of the psalm-tunes, published 1594. He died 1621.

impediment

impediment to its improvement, the pedantry which draws us back to useless and exploded customs, or wanton and licentious *innovation*, which quits the true and fundamental principles of the art, in order to pursue visionary schemes of reformation and singularity. Good Music is ever to be found between these two extremes; and though *Pedantry* takes hold of one hand, in order to draw her back to rusticity or exploded learning; and *Innovation* seizes the other to drag her from the right path, into the company of caprice, affectation, and singularity; she pursues her slow and steady course towards taste, elegance, simplicity, and invention, under the guidance of Judgment and Science.

To insert many examples of composition, during a barbarous age, particularly if some value be not given to them by their scarcity, is doing the reader but little kindness. Indeed, we are now approaching better times, when productions of a superior class will pour in upon us, and deserve insertion; of which, to point out the peculiar beauties and excellence will be a much more pleasing employment, than to censure or ridicule the defects of such as were produced during this reign.

Anthems, masques, madrigals, songs, and catches, seem to comprise the whole of our vocal Music for the Church, the Stage, and the Chamber, at this time. And with respect to instrumental productions under the title of *Fancies*, &c. as they were chiefly composed for lutes and viols, which are now laid aside, if they had been replete with genius and learning, justice could not have been done to them in the performance. Luckily the chief part of them are of so artless and insipid a kind, that no loss would accrue to judicious and reasonable lovers of Music by their utter annihilation.

The best English musicians of the early part of the seventeenth century have been included in the end of the sixteenth. There are many names come down to us of others who published works that were *still-born*, and can hardly be said ever to have existed. With accounts of these and their authors I shall not long detain the reader: the history of men who have done nothing cannot be too short, as they are can neither be made profitable nor pleasant.

Batfon, Anmer, Litchfield, Pilkington, and Ward, published madrigals and other vocal Music, about this time; Jones, Corkine, and Adfon Ayres; but all fo much alike, fo unmarked, unmeaning, and vapid, that there is not fufficient difference of ftyle, melody, or modulation in them to enable the moft penetrating critic to afign them to one compofer more than another. And it would be as vain for a cultivated and refined ear to hope for amufement in them, as a plagiarift to feek for plunder.

It has been inferred that prince Henry was a lover of Music, and a performer, from the lift of muficians on his eftablifhment; but this feems to have been more a matter of dignity and ancient uſage, than the prince's choice for the gratification of a particular paſſion: as it may be ſuppoſed that there never was a prince of Wales without minſtrels, or muficians in his ſervice. And no memorials remain of this promiſing young prince ever availing himſelf of the advantage of ſuch a band, in honouring them with his commands in any particular exerciſe of their ſkill and talents.

In the lift of his muſical eftablifhment, however, 1611, the names of ſeveral muficians appear who merit ſome notice: theſe, beſides Dr. Bull, were Robert Johnson, Thomas Lupo, Thomas Cutting, Thomas Ford, and nine more, at £. 40. per annum ſalary to each. Johnson, who was probably the ſon of the old compofer of that name, mentioned in the preceding volume, ſeems to have been an active profeſſor during the reigns of king James and Charles I. his name frequently appearing in the publications of the times (*m*); as does that of Lupo, not only in printed but manuſcript inſtrumental Muſic, particularly Fantafias for lutes and viols, of which many have been preſerved in the collections made by the nobility and gentry who then patronized the art. CUTTING was a celebrated performer on the lute, in the ſervice of the lady Arabella Stuart, the king's niece; to whom his queen and prince Henry wrote letters, requeſting her to permit him to engage in the ſervice of the king

(*m*) His inſtrument ſeems to have been the lute or harp, as he is allowed £. 20. per annum for ſtrings. See the grant in Rymer. He firſt ſet the Tempeſt of Shakspeare.

of Denmark, her majesty's brother (*n*). FORD published some pieces for four voices, accompanied by lutes and viols, 1607; and several of his catches appear in the first collections that were published of these facetious and social compositions.

The reader will perhaps be best enabled to judge of the musical productions of this reign by seeing them separately classed under the three principal divisions of the art, as it has admission in the *Church*, the *Theatre*, and *Chamber*.

Indeed, amidst many dull and worthless secular productions, the *Church* was furnished with some good compositions; but these, it is to be feared, will only prove, that such Music may be produced at all times with less genius than that which requires imagination, as well as science, to support it; as it depends more on mechanical rules and labour than invention.

THOMAS TOMKINS, a scholar of Bird, who took a bachelor's degree in Music, at Oxford, 1607, was an excellent contrapuntist, who supplied the Church with a great number of admirable compositions. Many of them are preserved in Dr. Tudway's collection, British Museum, and in Christ-church and Magdalen College, Oxford.

ELWAY BEVIN must be remembered among the musical luminaries of this reign. He was a scholar of Tallis, which is discoverable by his works; but it is not quite so easy to discover how it could have been at the recommendation of his master who died 1585, that he was sworn in gentleman extraordinary of the Chapel Royal, as has been said, 1589. His service in D minor, printed in Boyce's collection, has the true ancient cast of modulation, the *ferrugo pretiosa* upon it, which gives a dignity to its effects, for which we can now hardly account. The accents, as usual with the old masters, are often erroneously placed; but if that imperfection be removed or regarded with indulgence, the composition must be allowed, in point of harmony and modulation, to be admirable. And there are some grand effects produced by pauses and long notes without changing or infringing the original measure, that afford me me very pleasing sensations. Elway Bevin was, indeed, a man of genius, and it is to be la-

(*n*) These letters, with the answers to them, are among the Harleian MSS. in the British Museum: No. 6986, 42, 43, 44.

mented that more of his compositions have not been preserved. Besides his appointment in the Chapel Royal, he was organist of Bristol cathedral, and the master of Dr. Child. But, notwithstanding his abilities and great age, he was dismissed from all his employments, in 1636, on being discovered to adhere to the Romish communion.

In 1631 he published a work full of harmonical erudition, entitled "A brieve Instruction, &c. and Art of Canon," which, however useless it may be deemed now, must have been of singular service to young students in times when *canons* were regarded as the greatest efforts of human intellect, and the solution of these enigmas was equally difficult with that of the most abstruse and complicated problems in Euclid. Micheli Romano published a similar work at Venice, 1615 (o), and Valentini another at Rome, 1655 (p).

But the best English composer for the Church, during the reign of James I. seems, without exception, to have been ORLANDO GIBBONS; who, though not blest with longevity, yet, during his short life, contributed amply to the Music of the Church, which he enriched with numerous compositions, that are still fresh and in constant use among the best productions within its pale.

This excellent musician, a native of Cambridge, was brother of Edward Gibbons, bachelor of Music, organist of Bristol, gentleman of the Chapel Royal, and master of Mathew Lock; and of Ellis Gibbons, author of two madrigals in *the Triumphs of Oriana*, who is stiled by Ant. Wood, "the admirable organist of Salisbury." In 1604, at the age of twenty-one, Orlando was appointed organist of the Chapel Royal, in the room of Arthur Cock. In 1622, he was honoured at Oxford with a doctor's degree in Music, at the same time as his friend Dr. Heyther, when both were countenanced and favoured with indulgencies in the university in consequence of letters from the learned Camden, who recommended them with friendly zeal to its notice. According to Ant. Wood, the academical exercise in six or more parts, performed at this time for Heyther's de-

(o) *Musica vaga et artificiosa, continente motetti con obblighi, e canoni diversi, tanto per quelli che li diletano sentire varie curiosità, quanto per quelli che vorranno professare d'intendere*

diversi studii della Musica. Folio.

(p) *Canoni Musicali del Signor Pier Francesco Valentini Romano.*

gree, was composed by Orlando Gibbons, "as one or more eminent musicians then living had several times told him." So that *grown-gentlemen*, as well as boys, through idleness or ignorance, are sometimes reduced to the humiliating necessity of having recourse to the charity of friends, before they can exhibit an exercise (q).

The harmony of Gibbons's service in F, printed by Dr. Boyce, is pure, clear, and grateful; and the melody more accented and flowing than I have found in any choral Music of equal antiquity (r). The *two parts in one*, of the GLORIA PATRI, though they may

(q) A manuscript copy of the exercise performed for Dr. Heyther's degree, is said to have been found, signed with the name of Orlando Gibbons. It is an anthem for eight voices, taken from the forty-seventh psalm; and appears to be the very same composition as the anthem of Orlando Gibbons, to the words "O clap your hands together all ye people," printed in Boyce's *Cath. Mus.* Vol. II. p. 59.

Writing in eight real parts, *fugato*, in this close manner, is perhaps more difficult than in the same number of parts, *a due cori*. As the exercise for the degree with which I was honoured at Oxford, was required, by the statutes, to be composed in eight real parts; previous to supplicating for it in that university, besides the anthem consisting of solo, verse, and choral movements, accompanied by instruments, I prepared a vocal chorus, which the musical reader will find on the next plates, in eight real parts, in the same full and rigid manner as Orl. Gibbons's "O clap your hands together," before I had seen that or any other of the same kind. It was, however, not performed: as the late worthy Music-professor Dr. William Hayes said, that though this movement alone would have well entitled me to a doctor's degree, it would not be wanting, the choruses of the anthem being sufficiently full to satisfy him and the university of my abilities to write in many parts.

Upon shewing Mr. C. P. Emanuel Bach the score of the exercise that was performed at Oxford, 1769, he honoured it so far as to beg a copy of it, and afterwards had it performed, vocally and instrumentally, in St. Catharine's church at Hamburgh, under his own direction, 1773. It was repeatedly performed at Oxford, after it had fulfilled

its original destination; and once the principal soprano part had the advantage of being exquisitely sung by Miss Linley, now Mrs. Sheridan. It is hoped that the reader will pardon this *egotism*, which has been extorted from me by occasional and sinister assertions, "that I neither liked nor had studied Church Music."

(r) A few false accents, however, occur, and harmonies not generally received, such as the $\frac{6}{7}$; (see Boyce, *ubi supra*, Vol. I. p. 125, line i. 129, and elsewhere in the same service) $\frac{6}{4}$ when the base is neither stationary nor preparing for a close; and (p. 126.) the combination of $\frac{7}{4}$. But these are licences, which, in their transient use, can give but a momentary uneasiness to the most fastidious and learned ear. Vol. II. p. 52 l. i. bar 3d of the same admirable collection, there is a false relation in the harmony, which no ear can tolerate; nor do I imagine that the author ever intended that one part should sing F $\sharp$, while another was singing F $\natural$, not merely in passing notes, but fundamental. The second F, in the tenor, should certainly be natural, or the counter tenor should have F $\sharp$. And in the penultima bar of the same anthem, B $\sharp$ and C would please my ear much more than Bb and G; in the first soprano, p. 64. l. i. bar fourth, I should also like the interval of the false 5th to C $\sharp$, in the first tenor, better than C $\natural$ which, so near a close in D, disappoints a modern ear. However, this is *à l'antique*; and, at the time this anthem was composed, a false 5th in melody and in harmony, was equally prohibited, though that prejudice now no longer exists, and we find the greatest beauties arise from the use of both.

be the cause of some confusion in the words, discover no restraint or stiffness in the melody, which continues to move with the same freedom, as if no *canon* had existence. And though the *purists*, on account of the confusion arising from all the parts singing different words at the same time, pronounce the style, in which his full anthems are composed, to be vicious; yet the lovers of fugue, ingenious contrivance, and rich, simple, and pleasing harmony, must regard them as admirable productions, *alla Palestrina*, a style in which Tallis and Bird acquired so much renown.

Besides his admirable choral compositions, O. Gibbons was author of melodies in two parts to the hymns and spiritual songs of the Church, translated by Geo. Withers, and of several other works which will be mentioned elsewhere.

Dr. Tudway, in the dedication of the first volume of his manuscript "Collection of the most celebrated Services and Anthems used in the Church of England," addressed to lord Harley, for whom it was made; after a just and warm eulogium on the abilities of Tallis and Bird, says that "none of the later composers could ever make appear so exalted a faculty in compositions for the Church, except that most excellent artist, Orlando Gibbons, organist and servant to king Charles I. whose whole service, with several anthems, are the most perfect pieces of church compositions which have appeared since the time of Tallis and Bird; the air so solemn, the fugues and other embellishments so just and naturally taken, as must warm the heart of any one, who is endued with a soul fitted for divine raptures." To this encomium every candid judge of harmony will readily subscribe; but when the doctor tells us, that the celebrated service in F was composed by Orlando Gibbons in 1635, he furnishes no very favourable proof of his knowledge in chronology; as it is recorded on the monument erected to his memory by his widow, that he died ten years before that period. For in 1625, being commanded, *ex officio*, to attend the solemnity of the marriage of his royal master, Charles I. with the princess Henrietta of France, at Canterbury, for which occasion he had composed the Music, he was seized with the small-pox, and dying on Whitsunday, in the same year, was buried in that cathedral.

The

The court, during this reign, seems to have been wholly inattentive to Music. No royal concerts are on record, and the only secular use that appears to have been made of the art, within its precincts, was in the MASQUES performed for the amusement of his majesty and the royal family, in which occasional songs and symphonies were introduced.

Masques, which preceded the regular musical drama, required such splendid and expensive decorations, that, like the first operas of Italy and France, they seem to have been confined to the palaces of princes, and the mansions of the nobility; and those of Ben Jonson, Beaumont and Fletcher, Sir William Davenant, Milton, and others, appear to have been all originally written for private performers and particular occasions.

As the incidental songs in these dramas, and in our plays, with the overtures and act-tunes, included the whole of THEATRICAL MUSIC, during the reigns of our first James and Charles, I shall endeavour to save my reader the trouble of seeking indications of its use in the writings of our dramatic poets, by collecting and explaining such passages as immediately concern or allude to Music in the principal pieces of the times.

In *Gammer Gurton's Needle*, the first regular comedy in our language, written 1551, we have a song, and an instance of the early use of Music between the acts of each piece in our theatres; for which, at the end of the second act of this play, we have the following instructions to the musicians:

“ Into the town will I, my friendes to visit there,
 “ And hither straight again to see th' end of this gere.
 “ In the mean time, fellowes, pype up your *fidles* (s). I
 say, take them,
 “ And let your friendes hear such mirth as ye can make them.”

In the Tragi-comedy of *King Cambyfes*, Music is introduced at the banquet.

(s) This shews the early use of *fidles* in the play-house; but how these *fidles* were to pype, is not easy to discover.

“——they be at hand, fir, with stick and fiddle;

“ They can play a new dance called *Hey didle didle*.

In another part of this play a *psalm is sung* (t).

Exhibitions on a public stage are of great antiquity in our country, and had their beginning, as Stow tells us, at *Clerks well*, or *Clerkenwell*; a name it acquired from the annual meeting of the London parish clerks, in order to play some large history of Holy Scripture. “ For example, of later times, in the yeare 1369, the xiv. of Richard II. I read, the parish clarkes of London, on the 18th of July, played interludes at Skinner’s Well, neere unto Clarkes Well, which play continued three dayes together, the king, queen, and nobles being present. Also the yeare 1409, x. Henry IV. they played a play, at the Skinner’s Well, which lasted eight days, and was of matter from the creation of the world. There were to see the same, the most part of the nobles and gentiles in England.”

“ Skinner’s Well,” says the same author, “ was so called, for that the skinners of London held there certaine playes yeerely, played of Holy Scripture; in place whereof, the wrestlings have of later yeeres been kept, and are in part continued at Bartholomew-tide (u).”

According to Hall’s Chronicle, the first MASQUE performed in England, was at Greenwich, 1512, “ after the manner of Italie;” and Hollingshed says, that “ there was not only a *Masque*, but a good comedy of Plautus performed in 1520.” In 1530, a Masque was performed at Whitehall, “ consisting of Music, dancing, and a banquet, with a display of grotesque personages and fantastic dresses.” This piece seems only to have wanted *machinery* to fulfil the idea of a complete Masque, such as were afterwards written by Ben Jonson and others, which, with a constant musical declamation in *recitative* mixed with *air*, would have formed an *opera* exactly similar to the Musical drama of Italy, in the ensuing century.

(t) In the running title of this play, it is called a *Comedy of King Cambises*; but in the title-page it is said to be “ a lamentable

Tragedy full of pleasant mirth, &c.”

(u) Stow’s *Survey of London*, black letter, 1598.

Langbaine tells us, that *Jocasta*, a tragedy by Geo. Gascoigne and Fran. Kenwelmshe, was first acted in 1556; and Giles Jacob says, that each act of this play was introduced by dumb show, and concluded by a *chorus*; but whether this chorus was sung or not, is as yet unsettled by the critics. However, as it does not appear that the choruses to Shakspeare's historical plays were ever sung, there seems no reason for concluding that this chorus was performed in a different manner.

The next directions concerning Music, which I find in any of our regular old plays, is in "the order given for dumb show" before each act of the tragedy of *Gorbuduc*, or *Ferrex* and *Porrex*, written by lord Buckhurst in 1561, three years before Shakspeare was born.

First, the Music of violins began to play.

Second act. The Music of cornets.

Third act. The Music of flutes.

Fourth act. The Music of hautbois.

Fifth act. Drums and flutes.

In 1580, masques and poems of various kinds, written by Gascoigne and others, were performed in a splendid manner before queen Elizabeth, on her visit to the earl of Leicester, of which festival there are several minute accounts extant, particularly in Sir W. Dugdale's History of Warwickshire, 1656, from a book entitled "*The Princely Pleasures of Kenelworth Castle*."

Riccoboni says, that James I. on coming to the crown, in 1603, granted a licence to a company of players, in which INTERLUDES are included; but an interlude then was another word for a play, whether comedy, tragedy, or farce. Masques are not mentioned in this patent; but as masques, at this time, were court entertainments, or performed in the houses of the nobility, on particular occasions of festivity, the necessary machinery and decorations rendered such exhibitions too expensive for the ordinary public theatres. Indeed, the several parts in the masques of the sixteenth and seventeenth centuries were usually represented by the first personages in the kingdom; if at court, the king, queen,

and princes of the blood often performed in them. And this was the custom in France and other parts of Europe (x).

The English seem at all times to have received more delight from dramas, in which the dialogue is spoken and the songs are incidental, than from such as were sung throughout. Shakspeare and Beaumont and Fletcher have frequently introduced *masques for Music* in their plays (y). Of the fourteen comedies of Shakspeare there are but two or three in which he has not introduced singing; even in most of his tragedies, this wonderful and exquisite dramatist has manifested the same predilection for Music. And as Homer and Chaucer have furnished illustration to my subject, why should not Shakspeare?

In the *Tempest*, the use that is made of Music is admirable, as well as the description of its effects. Act I. Sc. 5. Ariel, invisible, playing and singing to Ferdinand, says:

“Where should this Music be, i’ th’ air or earth?”

“It sounds no more: and sure it waits upon

“Some god o’ th’ island.”

and afterwards:

“This is no mortal business, nor no sound

“That the earth owns: I hear it now above me.”

(x) The French and German writers on our musical drama confound *masque* with *mascarade* and *mascherata*, and *interlude* with the Italian *intermezzo*; but we had interludes long before the Italians had *intermezzi*, and our poems, or dramas, called *masques*, bear no resemblance to an Italian *mascherata*. M. de Miffy, who, in the *Bibl. Brit.* 1740, has given a regular series of our *masques*, particularly of the seventeenth century, is constantly mistaken in these particulars. In MS. *Memoirs of Music*, written by the Hon. Roger North, of Rougham, in Norfolk, brother of the lord Keeper, to which I was allowed access by his descendant the late Dr. Montague North, canon of Windsor; it is said, that “during the reign of king James I. the greatest

“encouragement was given to Music and
“musicians in the performance of *masques*
“at court; which being at once balls and
“operas, found employment for a great
“number of professors, who appeared in the
“royal theatres in a splendid uniform, composed of silk mantles and scarfs of various
“colours, with rich caps. And, for the
“better decoration of the scene, the master
“represented the character of Apollo.” A custom practised in the early days of musical dramas in Italy.

(y) It seems doubtful whether this species of drama acquired the title of *masque* from the actors appearing in *masques*, à l’antique, or from the characters being imaginary, and the actors in disguise.

Indeed,

Indeed, the serious part of this most fanciful play is very fortunately calculated for an opera. Shadwell, in the last century, made one of it, in the manner of what were then called operas on our stage (z).

Act II. Sc. 1. "Enter Ariel playing solemn Music." I never could understand this indication: no Music seems to be heard by the characters on the stage, nor do they take any notice of it through the whole scene. Afterwards, when with Music and a song he acquaints Gonzalo of the danger he is in, his mission has meaning. "While you here do snoring lie, &c."

Even Caliban talks well about Music:

"——the isle is full of noises,

"Sounds and sweet airs, that give delight and hurt not."

Ariel never appears or is employed without Music, which is sweetly described, and introduced with perfect propriety. Prospero calls for medicinal Music:

"A solemn air, and the best comforter

"To an unsettled fancy, cure thy brains."

Midsummer Night's Dream.

Act II. Sc. 5. "Come now a roundel, and a Fairy song."—If, as Dr. Gray says, a *roundel* is "a dance in a ring," a *roundelay* was the song and tune to such dance; as *ballad*, from *ballata* Italian, so *roundelay*, from *rondelet* old French, *rondeau* modern.

The ideas and language of Fairyism are wonderfully imagined and supported in this play; and the use assigned to Music happy and fertile.

Act IV. Sc. 1. "*Rural Music, tongs, &c.*" Poker and tongs, marrow-bones and cleavers, salt-box, hurdy-gurdy, &c. are the old national instruments of Music on our island.

(z) It has been lately performed, more as a musical masque than opera or play, at Drury-lane, to the Music of the late Mr. T. Linley, as it used to be to that of Dr. Arne and others. The songs in this play, Dr. Wilson, who reset and published two

of them, tells us, in his *Court Ayres, or Ballads*, published at Oxford, 1660, that "*Full fatbom five*, and *Where the bee sucks*, had been first set by Robert Johnson, a composer cotemporary with Shakspeare."

Queen.

Queen. "Music ho! Music: such as charmeth sleep."
Still Music, meaning such soft and gentle Music as tranquillizes, soothes, and lulls to sleep.

Act V. Sc. 1. In the list of sports ready for the nuptial feast of Theseus, is "the battle with the Centaurs; to be sung by an Athenian eunuch to the harp." This seems to imply a more ancient practice of castration for the voice than can be found in Opera Annals.

Speaking of Quince, in the clown's prologue, Hippolita says, "indeed, he hath play'd on his prologue, like a child on a recorder (a); a sound, but not in government."

Two songs alluded to in the last scene of this play are lost.

Oberon. "And this ditty after me
 "Sing and dance it trippingly."

Queen. "First rehearse this song by rote,
 "To each word a warbling note;
 "Hand in hand, with Fairy grace,
 "Will we sing, and bless this place."

Two Gentlemen of Verona.

Though this comedy furnishes fewer occasions for Music than the two preceding dramas, yet musicians are employed in it as well as musical allusions. As Ben Jonson, in his masque of *Cynthia's Revels*, speaks of the gamut or syllables of solmisation, *ut, re, mi, fa, sol, la*, which psalm-singers had made well-known to his audience; so Shakspeare, in this play, Act I. Sc. 3. introduces all the musical terms then in use: as, a *tune*, a *note*, a *light*, a *heavy tune*, *burden*, *melodious*, to *reach high*, *keep in tune*, *sing out*, *too sharp*, *too flat*, *concord*, *harsh descant*, the *mean base*, &c.

Act IV. Sc. last, there is a laboured description of the powers of poetry and Music; Orpheus's lute; *concert*, spelt as now:

"——to their instruments

"Tune a deploring *dump*,——or lament (*lamentatione*), sung by a wretched and sorrowing lover in the *dumps*.

(a) A Recorder is a flageolet, or birdpipe.

Sc. 2.

Sc. 2. A *serenata*, or *notturmo* is introduced :

“ ———now must I to her window,

“ And give some *evening* Music to her ear.”

Enter Musicians.

“ ———now, gentlemen,

“ Let's tune, and to it lustily.”

Song. “ Who is Sylvia? what is she? &c.”

Measure for Measure.

Though this play has less Music in it than the three preceding, yet at the beginning of Act IV. a song, from his own passionate pilgrim: “ Take, oh, take those lips away,” is sung to Mariana by a boy, who is sent away on the arrival of the duke, in the character of a friar; when apologizing for the seeming levity of listening to Music, she says:

“ I cry you mercy, sir, and well could wish,

“ You had not found me here so musical.”

To which the duke answers:

“ 'Tis good; though Music oft hath such a charm

“ To make bad good; and good provoke to harm.”

(This is a heavy charge, which it would not have been easy for Shakspeare to substantiate, and does not very well agree with what he says in the *Tempest* of the *innocuous* efficacy of Music: “ Sounds “ and sweet airs, that give delight and hurt not.” Music may be applied to licentious poetry; but the poetry then corrupts the Music, not the Music the poetry. It has often regulated the movements of lascivious dances; but such airs heard, for the first time, without the song or dance, could convey no impure ideas to an innocent imagination; so that Montesquieu's assertion is still in force: that “ Music is the only one of all the arts, which does not corrupt the mind.”

Merchant of Venice.

Act II. Sc. 1. A flourish of cornets when the Moorish prince comes in.

Ibid.

Ibid. Sc. 6. "The vile squeaking of the wry-neck'd Fife."

Act III. Sc. 2. "Let Music sound, while he doth make his choice;
 "Then, if he lose, he makes a swan-like end,
 "Fading in Music.
 "——he may win;
 "And what is Music then? then Music is
 "As are those dulcet sounds at break of day,
 "That creep into the dreaming bridegroom's ear,
 "And summon him to marriage."

Music within.

A song while Bassanio examines the caskets:

"Tell me where is fancy bred, &c.

The passages in the fifth act of this interesting play, are beautiful, numerous, and celebrated:

"And bring your Music forth into the air, &c."

"——soft stillness and the night

"Become the touches of sweet harmony."

Jessica. "I am never merry when I hear sweet Music."—This is the initial of a well-known, and now *proverbial*, eulogium on modulated sound: "The man that has no Music in his soul, &c(b)."

As you like it.

Act II. Sc. 1. A song: "Under the green-wood tree, &c."

Remarks on Music by Jaques. Then another song:

"Blow, blow, thou winter's wind."

Music. Song: "What shall he have that kill'd the deer."

Song: "'Twas a lover and his lass."

Still Music. Song: "Then is there mirth in heav'n."

Another song: "Wedding is great Juno's crown."

Love's Labour lost.

Act III. Armado. "Warble child; make passionate my sense
 "of hearing.

This

(b) See Pref. to Vol. I. *Hist. of Mus.* p. xvi.

This is a most beautiful and comprehensive request: none of the fine arts can subsist, or give rapture, without *passion*. Hence mediocrity is more intolerable in them than in other inventions. Music without passion is as monotonous as the tolling of a bell.

But no song is printed: though the author tells us there is *singing*. Dr. Johnson says, "here is apparently a song lost."

Music as for a Masquerade.

Songs for Spring and Autumn:

"When daisies pied."—And "When icicles hang on the wall."

Winter's Tale.

Two nonsensical songs, by the rogue Autolychus:

"When daffodils begin to peere."—"Jog on, jog on, the foot-path way."

"He's main musical." This Autolychus is the true ancient minstrel, as described in the old Fabliaux. See this *Hist.* Vol. II. p. 208.

A three-part catch, ready planned by the poet, and another pedlar's song: "Will you buy any tape?"

Twelfth Night.

Act I. Sc. 1. This play opens with a beautiful eulogium on Music:

"If Music be the food of love, play on, &c."

The use of *Evirati*, in the same manner as at present, seems to have been well known at this time (about 1600) (b). For Viola says:

"——I'll serve the duke;

"Thou shalt present me as a *Eunuch* to him,

"It may be worth thy pains, for I can sing,

"And speak to him in many sorts of Music,

"That will allow me very worth his service."

(b) Shakspeare died 1616; and though this play was not printed till 1623, yet it

certainly was written several years before the decease of the author.

And the Duke's sensibility to the power of Music is disclosed in the first interview, when he says to Viola :

" ———thy small pipe
 " Is as the maiden's organ, thrill and sound,
 " And all is semblative—a woman's part.
 " I know thy constellation is right apt
 " For this affair," ———supposing her to be a Eunuch.

Act II. Sc. 3. The Clown is asked for a *love-song*, and sings :

" O mistress mine, where are you roaming? &c." And
 " What is love? 'tis not hereafter, &c."

Ibid. *They sing a catch*, beginning " Hold thy peace*."

Sc. 4. Scraps of songs and catches are roared out by Sir Toby, Sir Andrew, and Clown, as " Three merry men be we.—Tilly, val-
 " ley, lady!—There dwelt a man in Babylon, lady, lady.—O the
 " twelfth day of December.—Farewel, dear heart, since I must needs
 " begone.—His eyes do shew his days are almost done.—Shall I
 " bid him go? what, an if you do?—Shall I bid him go, and spare
 " not? O no, no, no, you dare not." All these, probably, were
 well known in Shakspeare's time.

Sc. 5. The Duke, who is as constant in his passion for Music, as for Olivia, says :

" ———give me some Music now—
 " Now, good Cesario, but that piece of song,
 " That old and antique song, we heard last night;
 " Methought, it did revive my passion much;
 " More than light airs, and recollected terms
 " Of these most brisk and giddy-paced times (c).
 " ———how dost thou like this tune?—
 " It gives a very echo to the feat

* The reader will see the original Music of this catch, among others, hereafter.

(c) *Measures*, in the musical sense. Mr. Stillingfleet, and other croakers, have ea-

gerly cited this passage as a satire on modern fine Music and singing; but, I believe, Shakspeare meant the reverse; and points at merry jigs and vulgar levity of strain.

" Where

"Where love is thron'd,——(d).

Ibid. "——the song we had last night——

"——it is old and plain;

"The spinsters and the knitters in the sun,

"And the free maids that weave their thread with bones

"Do use to chaunt it: it is filly sooth (e),

"And dallies with the innocence of love,

"Like the old age (f).

Song: "Come away, come away, death."

Act IV. Sc. 4. The Clown, as elsewhere, is much addicted to singing. Song, by the Clown:

"When that I was a little tiny boy, &c." serves as an epilogue to this entertaining play.

In *The Taming of the Shrew*, no other use is made of Music than to introduce minstrels at the wedding, and disguise Hortensio in the character of a man *well seen in Music*, to facilitate his admission to the presence and courtship of Bianca; an expedient, however, which was unsuccessful.

More fragments of old ballads are here quoted than in any other of Shakspeare's plays; though, as Dr. Warburton said, "he seemed to bear the ballad-makers a very particular grudge, and often ridicules them with exquisite humour."

In *The Comedy of Errors* Music has no admission or concern.

Much ado about Nothing.

Music at the masquerade, Act II. Sc. 2. And in Benedict's dainty description of such an all-accomplished woman as could ever incline him to wed, he adds to her qualifications, *Music*: "——of good discourse, an *excellent musician*, and her hair of what colour it shall please God." Sc. 8.

Act II. Sc. 9. The song: "Sigh no more, ladies, sigh no more," is introduced by several reflections on Music, and the affectation of singers. *Baltazar*, the musician and servant to Don

(d) The heart. Pope's idea of the sound being an echo to the sense, seems derived from this passage.

(e) Simple truth. *Johnson.*

(f) Times of simplicity. *Ib.*

Pedro, was perhaps thus named from the celebrated Baltazarini, called *De Beaujoyeux*, an Italian performer on the violin, who was in the highest fame and favour at the court of Henry III. of France, 1577 (g). In the last act, sc. 8, the epitaph and song are beautiful and well calculated for Music.

All's Well that ends Well.

Act I. Sc. 5. Flourish of *cornets* for the king of France's entrance and exit.

Act III. Sc. 8. *A tucket afar off* (b). Ibid. *A march afar off*.

Act V. Sc. 3. *Sound trumpets.*

Historical Plays. King John.

No Music but trumpets and the din of war.

King Richard II.

Act I. Sc. 4. Military instruments are admirably described:

“ —rous'd up with boist'rous untun'd drums,

“ And harsh resounding trumpets dreadful bray.”

Ibid. Mowbray, duke of Norfolk, on being ordered into banishment, says:

“ My native English, now I must forego;

“ And now my tongue's use is to me no more,

“ Than an unstringed viol, or a harp;

“ Or, like a cunning instrument cas'd up,

“ Or being open, put into his hands

“ That knows no touch to tune the harmony.”

Act II. Sc. 1. “ —the tongues of dying men

“ Inforce attention, like deep harmony:

“ —more are men's ends mark'd, than their lives before;

“ The setting sun, and *Music in the close*,

“ As the last taste of sweets, is sweetest last —”

Ibid. Sc. 3. Speaking of John of Gaunt's death — “ all is said,

“ His tongue is now a stringless instrument.”

(g) See above, p. 274.

(b) This word is manifestly a corruption.

of the Italian word *toscata*, a flourish.

Act V. Sc. 10. Richard in his prison, says—"Music do I hear?

"Ha, ha; keep time: how slow'r sweet Music is,

"Where time is broke, and no proportion kept?

Here he plays on musical terms for several lines.

All instruments, played with the bow, in Shakspeare's time, were fretted, except violins.

In *the Taming of the Shrew*, act II. sc. 3. he could not resist the temptation of quibbling on the term *fret*.

"Frets call you them? quoth she: I'll fume with them."

"——then call'd me rascal, fidler,

"And twangling *Jack*,"

alluding to a famous street-musician of the time.

First Part, Henry IV.

Act I. Sc. 2. Falstaff says he's as melancholy as the "drone of a Lincolnshire bagpipe."

Act II. Sc. 3. "An I have not ballads made on you all, and sung to filthy tunes, let a cup of sack be my poison."

Act III. Sc. 3. "——thy tongue

"Makes Welch as sweet as ditties highly penn'd,

"Sung by a fair queen in a summer's bower,

"With *ravishing division* (i) to her lute."

Second Part of Henry IV.

Induction. "——Rumour is a pipe,

"Blown by surmises, jealousies, conjectures;

"And of so easy and so plain a stop,

"That the blunt monster with uncounted heads,

"The still discordant wavering multitude,

"Can play upon it (k)."

I advanced no farther, regularly, in my hunt through the pleasant wilds of *Shakspeare*; but in dipping accidentally, the following passages struck me as worthy of notice.

(i) Divisions were very uncommon in vocal Music during the time of Shakspeare.

(k) This allusion to the flute is well supported.

Henry V. Act I. Sc. 2. There is a manifest allusion to the different parts of Music :

“ For government, though *high*, and *low*, and *lower*,

“ Put into *parts*, doth keep in one *consent* (1),

“ Congreeing in a full and natural close,

“ Like Music.”

In *Othello*, Act IV. Sc. 13. Desdemona says :

“ My mother had a maid, called Barbara ;

“ She was in love ; and he, she lov'd, prov'd mad, (false)

“ And did forsake her : she had a song of *willow*,

“ An old thing 'twas, but it express'd her fortune,

“ And she died singing it. That song, to-night,

“ Will not go from my mind ; I've much ado,

“ Not to go hang my head all o' one side,

“ And sing it like poor Barbara.”

King Lear, Act I. Sc. 7. “ O, these eclipses portend these divisions ! *fa, sol, la, mi.*”

None of the commentators have hitherto been sufficiently skilled in Music to see the meaning of these syllables in solmisation, which imply a series of sounds so unnatural, that ancient musicians prohibited their use. *Mi contra fa est diabolus*. Shakspeare, however, shews by the context, that he was well acquainted with the property of the musical intervals contained in the *Tritonus*, or sharp 4th, which consisting of three tones, without the intervention of a semitone, is extremely difficult to sing, and disagreeable when sung, if *mi*, or *fa*, is the last note of the phrase or passage.

But to return to MASQUES, which were certainly the precursors of *operas* in England, and belong to the chain of dramas which completed the *union of Poetry and Music* on our stage : and it does

(1) In a note on this passage, *consent* (or rather *concent*) has been defined *unison*. But *concent* is connected harmony, in general, and not confined to any specific consonance.

Concentio and *concentus* are both used by Cicero for the union of voices or instruments in what we should now call a chorus, or concert.

not appear, on examination, that the Italian *Mascherate*, published by Lafca, which have been thought their prototypes, were dialogued or performed on any stage. They seem to have been only processional songs, sung through the street by the representatives of different professions and trades, *masqued*, during carnival time. And the interludes which De Miffy and Riccoboni, and their translators, think we had from the Italian *intermezzi*, seem to want analogy: as *interlude*, with us, was a general name for every species of stage representation, out of the Church.

Masques in England certainly bear some resemblance to *operas*: as they are in dialogue; performed on a stage; ornamented with machinery, dances, and decorations; and have always Music, vocal and instrumental. But then the essential and characteristic criterion, *recitative*, is wanting, without which the resemblance is imperfect. Our musical pieces, which are sometimes honoured with the name of opera, differ in this particular so much, that they more resemble masques than the dramas which are entitled to that appellation; for, in English musical dramas, the dialogue is all declaimed or spoken in the same manner as in our old masques; and in Italy, whence we have both name and thing, an opera consists of both recitatives and airs, and is sung from the beginning to the end.

In the *Maid's Tragedy*, by Beaumont and Fletcher, it is said of *masques*, that "they must commend their king, and speak in praise of the assembly; bless the bride and bridegroom in person of some god; they are tied to rules of flattery (*m*)."

It has already been observed, that masques were generally written for the use, and, consequently, the pleasure of courts; it was therefore natural for their authors to render them as palatable to their patrons and constituents as possible. It does not appear that either Beaumont or Fletcher was often called upon to contribute his quota to these splendid exhibitions; and the passage just cited has in it something of sour and austere, that seems to favour of pique or republicanism.

Most of the numerous masques, that were performed at court

(*m*) Milton, in his *Paradise Lost*, speaks contemptuously of this species of drama:

"——— court amours

"Mix'd dance, and wanton Mask, or
"midnight ball, &c."

and elsewhere, during this and the subsequent reign, were written by Ben Jonson, and set to Music either by Alfonso Ferrabosco, jun. or Nicholas Lanier. Of the dramatic Music of these celebrated musicians of their time, it would now be difficult to produce many specimens. However, one of Ferrabosco's songs in the *Volpone* of Ben Jonson, acted 1605, being printed among his *Ayres*, No. 6. will have a place on the next plates.

It is recorded, in the folio edition of Ben Jonson's works, printed 1640, that in 1617, his whole masque, which was performed at the house of Lord Hay, for the entertainment of the French ambassador, was set to Music after the Italian manner, *stilo recitativo*, by NIC. LANIERE (n), who was not only ordered to set the Music, but to paint the scenes.

This short piece being *wholly* in rhyme, though without variation in the measure, to distinguish airs from recitation, as it was all in musical declamation, may be safely pronounced the first attempt at an opera in the Italian manner, after the invention of recitative.

But in the same year, in the masque, by the same author, called *the Vision of Delight*, presented at court during Christmas, there is a manifest distinction of *air* from *recitative*; in both which styles the whole piece, in verses of different measures, was performed. It is opened by *Delight*, personified, who, *stilo recitativo*, "spake in song." Then *Night*, likewise personified, *sung*: "Break Fancy from thy cave of cloud, &c." This air ends in a chorus or *quire*. After which *Fancy* spake, in *stilo recitativo*. Then *Peace* sung: "Why look you so, &c." After which an air that terminates in a *quire*. The song ended, *Wonder* spake (in recitative.) Then dancing, singing, and chorus.

Here we have all the characteristics of a genuine opera, or musical drama of modern times, complete: splendid scenes and machinery; poetry; musical recitation; air; chorus; and dancing.

(n) *Niccolo Lanier* was an Italian who came into England early in the last century; there is a fine portrait of him at the Grange in Hampshire, by Vandyke. It was the sight of this portrait that determined Charles I. to employ that excellent painter. Lanier professionally practised Music, painting, and engraving; but his greatest excellence

was in Music. His own portrait, painted by himself, is in the Music-school at Oxford. He etched a considerable number of plates for a drawing-book; was an able connoisseur in pictures: and had the art of giving modern paintings an air of antiquity, and putting off copies for originals. *Granger's Biog. Hist. of Engl.* Vol. I. p. 539.

Though

Though the Music of this masque is not to be found, yet of Laniere's *Musica narativa* we have several examples, printed by Playford in the collections of the time; particularly the *Ayres* and *Dialogues*, 1653, and the second part of the *Musical Companion*, which appeared in 1667; and in which his Music to the dialogues is infinitely superior to the rest: there is melody, measure, and meaning in it. His recitative is more like that of his countrymen at present, than any cotemporary Englishman's. However, these dialogues were composed before the laws and phraseology of recitative were settled, even in Italy. His cantata of *Hero* and *Leander* was much celebrated during these times, and the recitative regarded as a model of true Italian musical declamation.

Vocal Music for the CHAMBER, or for social and private purposes, distinct from that of the *Church* and *Theatre*, during the reign of James I. consisted chiefly of madrigals, which had been composed in the preceding century, and of which the favour began to fade. To these, however, were added an excellent set by Orlando Gibbons, 1612, and eight several sets, at different times, by Michael Este, with others of an inferior class, by Batson, Pilkington, Litchfield, and Ward. Besides these of the madrigal kind, but more dry, fanciless, and frivolous, *Ayres of four and more parts*, were published by Ford, Bartlett, Sir William Leighton, Ravenscroft, Bennet, and Attey. Of songs for a *single voice*, but few were printed, and these with only a single accompaniment for the lute or viol, without symphony or ritornel. Ferrabosco's ayres to the lute have been already mentioned; and no other compositions of this kind seem to have been produced, except by Adson, under the title of *Court Ayres*, and *Ayres to sing to the Lute and Bassè-viol*, by William Corkine, Robert Jones, and John Danyel; all obscure musicians, and of mean abilities.

Among vocal productions for the *Chamber*, and for *social* purposes, must not be forgotten CANONS, ROUNDS, and CATCHES; of which ingenious and exhilarating species of composition, the first collection that was ever printed, appeared during this reign under the title of "*Pammelia* (o) *Musicks Miscellanie*; or mixed varietie of pleasant Roundelays and delightful Catches of 3, 4, 5, 6, 7, 8,

(o) A word perhaps formed from *παν μιστος*.

“ 9, 10 parts in one (*p*). None so ordinarie as muscal, none so
 “ muscal as not to all very pleasing and acceptable. London, print-
 “ ed by William Barley, for R. B. and H. W. and are to be sold
 “ at the spread eagle at the north doore of Paules,” quarto, 1609. The
 names of none of the composers of these epigrammatic and *pointed*
 effusions have been preserved; but many of them seem of great an-
 tiquity, which is discoverable both by the words and style of com-
 position. Great muscal science is manifested in the canons, and the
 harmony and contrivance of the rest are excellent. The words, in-
 deed, except those of the canons, which consist of small portions of
 the psalms and other parts of scripture, in Latin (which seems to imply
 that they were set before the Reformation), are, in general, devoid
 of wit, humour, poetry, and common sense (*q*). It has been before-
 observed, in the course of this work (*r*), that our lyric poetry, dur-
 ing the sixteenth and part of the seventeenth century, was in a bar-
 barous state, and far inferior to the Music of the times. But the
 composers seemed so little solicitous about the words they had to set,
 as frequently to prefer the syllables of solmisation *Ut re mi fa sol la*;
Hey down down; derry down; or merely *Fa la*, to songs of Spenser
 and Shakspeare. I shall, however, for the sake of the muscal com-
 position, as well as to shew the humour and taste of the times, gra-
 tify the lovers of such scarce and curious productions, with speci-
 mens of the contents of this primitive Catch-book.

(*p*) Canons, rounds, and catches were never published in score till after the insti-
 tution of the present CATCH-CLUB in 1762; and, therefore, *one line* often contained the
 whole composition; the places where the se-
 veral parts were to begin being indicated by
 signs or numbers. A *Round* is sometimes
 called a *canon in the unison*, and sometimes,
 but erroneously, a *Catch*; but it is distinct from
 both; being no more than a song of as ma-
 ny strains, or sections, as parts; which, in-
 stead of being begun together, are performed
 after each other always singing different words
 and different notes in harmony with the
 rest; till a signal is given, by holding up the
 hand, for finishing upon the perfect chord
 of the key note, where the author has plac-
 ed this final mark, $\curvearrowright$. A *Catch* is sung in
 the same manner as a *Round*, the second per-
 former beginning the first strain, when the

leader begins the second; however, in the
 course of the performance, some latent mean-
 ing or humour is produced by the manner
 in which the composer has arranged the
 words for singing, which would not appear
 in perusing them.

(*q*) In the same year was published an-
 other collection, entitled “*Deuteromelia*,
 “ or the second part of Musick’s melodie,
 “ or melodious Musicke of pleasant Roun-
 “ delaies, &c. London, printed for Tho-
 “ mas Adams, dwelling in Paules church-
 “ yard, at the sign of the white lyon, 1609.”
 This publication is much inferior to the pre-
 ceding, and chiefly consists of songs for three
 voices, in which different stanzas are sung
 to the same Music, after the manner of what
 are now called *Glees*.

The reign of our first James is a very early period in the cultivation of Music, merely *instrumental*. The words *Concerto* and *Sonata* seem at this time not to have been invented, even in Italy; as the Crusca dictionary gives no instance of so early a use of them in music-books. *Concento* and *suono* implied nearly the same things in the days of Boccaccio, as *concerto* and *sonata* since; but *concertare* and *concertanti* were at first applied to the union of instruments with voices, in motets and madrigals, by *doubling* the voice-parts. It was not till late in the seventeenth century that instrumental pieces, of many parts, began to be called *concertos*, and of few, *sonatas*.

The earliest compositions I have found in Italy, for three or more instruments of the same species, are *Ricercari* and *Fantasia*. But of these, none seem to have been printed, when the elder Doni published the second edition of his *Libreria*, 1557; as all the instrumental Music that appears in his catalogue of musical compositions, which had then been published in Italy, are *Intabolature da organi, et da leuto, d'Anton da Bologna, di Giulio da Modena, di Francesco di Milano, di Jaches Buas, piu di dieci volumi, e la continua*.

About the beginning of the seventeenth century *madrigals*, which were almost the only compositions, in parts, for the Chamber, then cultivated, seem to have been suddenly supplanted in the favour of lovers of Music by a passion for FANTASIAS of three, four, five, and six parts, wholly composed for viols and other instruments, without vocal assistance. And this passion seems to have arisen, from the calling in these instruments to reinforce the voice-parts, with which they played in unison, in the performance of *motetti* and *madrigals*, thence termed *concertati*. At length, the instrumental performers discovered, that both the poetry and singing of the times might be spared without any great loss or injury to musical effects; as the words, if good, were rendered unintelligible by fugue, imitation, and multiplicity of parts; and the singing, being often coarse and out of tune, could be better supplied by their own performance. Thus vocal Music not only lost its independence, but was almost totally driven out of society: as the ancient Britons, calling in the Saxons to assist

M m 2

them

them in their conflicts with the Picts, were themselves subdued and forced from their possessions, by too powerful auxiliaries.

I am the better enabled to speak of the instrumental Music of this period, by being fortunately in possession of several considerable manuscript collections of *fancies*; particularly one in six parts, folio, which had been made for the L' Estrange family, in Norfolk, by the celebrated composer of Charles the first's reign, Mr. John Jenkins, and collated with other copies, and corrected not only by himself, but by six or eight other eminent masters of the times (s).

These pieces, which consist more of motets, madrigals, and *in nomines*, originally designed for voices, than *fantasie* made expressly for instruments, were the productions of William Bird, Alfonso Ferrabosco, sen. and jun. William White, John Ward, Thomas Ravenscroft, William Cranforde, Thomas Lupo, Giovanni Coperario, and others. The style would appear now very dry and *fanciless*, in spite of the general title of these pieces. Indeed, it would be difficult to select one of them that would afford any other amusement to my readers, than that of discovering how ingenious and well disposed the lovers of Music, during the former part of the last century, must have been, to extract pleasure from such productions.

Infinite pains, however, seem to have been taken in collating and correcting these books; which only prove that however insipid and despicable we may think their contents, our forefathers were of a different opinion; and that, contemptible as they now seem, they were the best which the first musicians of the age could then produce. There is an infancy in every human production, that is perfectible. The instruments to which these *fancies* were adapted, were *viols* of different sizes, of which it was usual, during the last century, for most musical families to be in possession of a *chest*, consisting of two trebles, two tenors, and two basses, with six strings upon each, all tuned alike, by 4ths and 3ds, and the necks *fretted*. The compass,

(s) At the decease of the late Sir Henry L' Estrange, Bart. of Hunston, in Norfolk, and the last survivor of that ancient family,

I was favoured with this collection by his nephew, Nic. Styleman, esq; of Snettisham, in the same county.

and

and *accordatura*, of this instrumental family were the following :

Base-viol, or *Viol da Gamba*.

Tenor-viol, or *Viol da Braccio*.

The passages given to

these several instruments, at this time, discover no kind of knowledge of the expressive power of the bow; and even Or. Gibbons, who composed so well for voices in the Church, seems very little superior to his contemporaries in his productions for instruments. Indeed, his madrigals of five parts, as well as those of many others, are said in the title-page to be *apt for viols and voices*: a proof that with us, as well as the ancient Greeks, and other nations, there was at first no Music *expressly composed for instruments*; consequently, the powers of these instruments must have been circumscribed; and when this Music was merely played, without the assistance of the human voice and of poetry, capable of no great effects. The subjects of Orlando Gibbons's madrigals are so simple and unmarked, that if they were now to be executed by instruments alone, they would afford very little pleasure to the greatest friends of his productions, and those of the same period. At the time they were published, however, there was nothing better with which to compare them, and the best Music which good ears can obtain, is always delightful, till better is produced. Air, accent, grace, and expression, were now equally unknown to the composer, performer, and hearer; and whatever notes of one instrument were in harmony with another, were welcome to the player, provided he found himself honoured from time to time with a share of the subject, or principal melody; which happening more frequently in canons, and fugues, than in any other species of composition, contributed to keep them so long in favour with performers of limited powers, however tiresome they may have been to the hearers, when constructed on dull and barren themes.

Music is so much a work of art, study, exercise, and experience,
that

that every style must be best treated, even by men of the greatest genius, in proportion to the attention and labour they bestow on that particular species of composition. Orlando Gibbons, who appears to such advantage as a Church composer, is utterly contemptible in his productions for instruments, of whose powers he was ignorant. Indeed, all instrumental Music, but that of the organ, seems to have been in a very rude state at this time throughout Europe; and, if we except the fugues of Frescobaldi, all the Music, even for keyed-instruments, is dry, difficult, unaccented, and insipid.

Simpson in his *Compendium*, § xv. p. 115. speaking of fancies, says, that "this kind of Music (the more is the pity) is now (1667) much neglected, by reason of the scarcity of auditors that understand it; their ears being better acquainted and more delighted with light and airy Music." He instances as the best composers of fancies, in England, Alfonso Ferabosco, Coperario, Lupo, Mico, White, Ward, Dr. Colman, and Jenkins. Page 118, the same author says, that "the lovers of instrumental Music need not have recourse to outlandish authors for compositions of this kind; no nation," says he, "in my opinion, being equal to the English in that way; as well for their excellent, as for their various and numerous *consorts* of three, four, five, and six parts, made properly for instruments, of which FANSIES are the chief."

It may perhaps be necessary here to mention, that James I. upon what beneficial principle it is now difficult to discover, by letters-patent incorporated the musicians of the city of London into a COMPANY, and they still continue to enjoy privileges in consequence of their constituting a fraternity and corporation; bearing arms azure, a swan argent within a tressure counter-flure, or: in a chief, gules, a rose between two lions, or: and for their crest the celestial sign Lyra, called by astronomers the Orphean Lyre (†). Unluckily for the *bon-vivans* of this tuneful tribe, they have no hall in the city for festive delights! However, on days of greatest *gourmandise*, the members of this body are generally too busily employed in exhilarating

(†) See the dedication of Butler's *Principles of Music*, 1636.

others,

others, comfortably to enjoy the fruits of good-living themselves. And here historical integrity obliges me to say, that this company has ever been held in derision by real professors, who have regarded it as an institution as foreign to the cultivation and prosperity of good Music, as the train-bands to the art of war. Indeed, the only uses that have hitherto been made of this charter seem the affording to aliens an easy and cheap expedient of acquiring the freedom of the city, and enabling them to pursue some more profitable and respectable trade than that of fidling; as well as empowering the company to keep out of processions and city-feasts every street and country-dance player of superior abilities, to those who have the honour of being styled the *waits of the corporation* (u).

About the end of this reign a *Music-lecture*, or PROFESSORSHIP, was founded in the university of Oxford, by Dr. William Heyther. It is imagined that he was stimulated to this act of beneficence by the example and precepts of his friend Camden, who having a few years before his decease determined to found a history-lecture in the same university, dispatched his friend Heyther on a mission thither, with the deed of endowment properly executed, and addressed to the vice-chancellor Dr. Piers (x). It was in consequence of this em-

(u) The present king of France has lately dethroned the king of the minstrels, and disfranchised and suppressed a similar establishment. See *Essai sur la Mus.* Tom. I. p. 415. and *Mercure de France, pour Avril, 1773.*

(x) The following letter from Dr. Piers to Camden, which is printed in the collection of epistles to and from that illustrious antiquary, published by Dr. Thomas Smith, 1691, p. 329. will clear up a point concerning which Ant. Wood has thrown a doubt: whether Orlando Gibbons had ever been admitted to an academical degree in Music.

EP. CCLXIII.

G. Pierfius. G. Camdeno.

“Worthy Sir,

“The university returns her humble thanks to you with this letter. We pray for your health and long life, that you may live to see the fruits of your bounty. We have made Mr. Heather a doctor in

“Musick; so that now he is no more master but doctor Heather; the like honour for your sake we have conferred on Mr. Orlando Gibbons, and made him a doctor too, to accompany Dr. Heather. We have paid Mr. Dr. Heather’s charges of his journey, and likewise given him the Oxford courtesie, a pair of gloves for himself and another for his wife. Your honour is far above these things. And so desiring the continuance of your loving favour to the university, and to me your servant, I take my leave.

“Yours ever to be commanded,
Oxon, 18 May, 1622. “William Piers.

“Mr. Whear shall make his oration this term; and I shall write to you from time to time what orders the university will commend to your wisdom, concerning your history lecture.”

bassly that Heyther obtained his degree of doctor in Music, with little expence and trouble; and perhaps it was in gratitude for the kindness he received from the university upon this occasion, as well as in imitation of his learned friend Camden, that he endowed the professorship, which is both theoretical and practical. At the time of this endowment, in order to promote the practice of the art, "he gave to the Music-school an harpsicon, a chest of viols, and "divers music-books, both printed and manuscript."

It is the more likely that Heyther was instigated by Camden to found this professorship, who had himself been a chorister at Magdalen College, Oxford, and may be supposed to have still retained a love for Music; and that Camden had a great ascendance over him may be inferred from the intimate friendship which had long subsisted between them. Their several employments reciprocally obliged them to reside in Westminster: for Camden was master of Westminster-school, and Heyther a gentleman of the King's Chapel. In town they resided under the same roof; and, in 1609, when a pestilential disease had reached the house next to that of Camden and himself, by which Camden was afterwards infected, he retired to the residence of his friend Heyther at Chislehurst, and by the assistance of Dr. Giffard, his physician, was cured. But of his friendly regard for Dr. Heyther, he gave ample testimony at his decease, by appointing him his executor, and bequeathing to him and his heirs an estate of £.400 a year, for the term of ninety-nine years, he and they paying to the history-professor £.140 per annum; at the expiration of which term, the estate was to vest in the university (y).

(y) *Biog. Brit. art. Camden*, 133, in not.

C H A R L E S I. 1625.

This prince who, during the life of his father, had been a scholar of Coperario, on the viol da gamba, and, according to Playford, had made a considerable progress on that instrument; when he ascended the throne, not only discovered a great affection for Music in general, but manifested a particular attention and partiality to compositions for the church (z). At his private concerts he is said to have condescended to honour with his notice several of his musical servants, who had the good fortune to be frequently in his presence; and to gratify them in a way the most flattering and agreeable to every artist of great talents, with smiles and approbation, when either their productions or performance afforded him pleasure. And, indeed, whatever political crimes may be laid to the charge of this prince, he was certainly a most liberal and gracious master to his domestics, and possessed a singular power of attaching them to his person by kindness and condescension, still more than by royal bounty and munificence.

Upon his accession to the crown, Nicholas Lanier was appointed master of the king's Music; and in Rymer's *Fœdera* (a), is the following grant in favour of him and the rest of his majesty's band.

“ CHARLES, by the grace of God, &c. To the treasurer and
 “ under-treasurer of our exchequer nowe beeing, and that hereafter
 “ for the tyme shall be, greetinge, Whereas wee have beene graci-
 “ ously pleased, in consideration of service done, and to be done unto
 “ us by sundrie of our musicians, to graunt unto them the several
 “ annuities and yearly pensions hereafter following, (that is to say)
 “ to Nicholas Lanier, master of our Music, two hundred poundes
 “ yearly for wages; to Thomas Foord fourscore poundes yearly for

(z) Playford (*Pref. to his Introd.*) speaking of the musical skill of our princes of the house of Tudor, says, “ Nor was his late majesty Charles I. behind any of his predecessors in the love and promotion of this science, especially in the service of Almighty God, and with much zeal he would hear reverently performed, and often appointed, the service and anthems

“ himself, especially that sharp service composed by Dr. William Child being of (from) his knowledge in Music, a competent judge therein; and would play his part exactly well on the base-viol, especially of those incomparable fancies of Mr. Coperario to the organ.”

(a) Tom. XVIII. p. 728.

" his wages, that is, for the place which he formerly held, fortie
 " pounds yearly, and the place which John Ballard, lately deceased,
 " held, and now bestowed upon him, the said Thomas Foord, fortie
 " poundes yearly; to Robert Johnson, yearly for his wages, fortie
 " poundes, and for stringes twentie poundes by the yeare; to Tho-
 " mas Day yearly for his wages fortie poundes, and for keeping a
 " boy twentie-fower poundes by the yeare; also to Alfonso Fera-
 " bosco, Thomas Lupo, John Laurence, John Kelly, John Cog-
 " shall, Robert Tayler, Richard Deering, John Drewe, John Lani-
 " ere, Edward Wormall, Angelo Notary, and Jonas Wrench, to
 " everie of them fortie poundes a piece yearly for their wages (b).
 " And to Alfonso Bales and Robert Marthe, to each of them twen-
 " tie poundes a piece yearly for their wages.

" Theis are therefore to will and command you, out of our trea-
 " sure in the receipt of our exchequer, to cause payment to be made
 " to our said musicians above mentioned, and to everie of them se-
 " verally and respectively, the said several annuities and allowances,
 " as well presently upon the sight hereof for one whole yeare end-
 " ed at the feast of th' annunciation of the blessed Virgin Mary last
 " past before the date hereof, as alsoe from the feast hitherto, and
 " soe from tyme to tyme hereafter at the fower usual feasts or termes
 " of the yeare, (that is to say) at the feast of the nativity of St.
 " John the Baptist, St. Michael th' Archangell, the birth of our
 " Lord God, and th' annunciation of the blessed Virgin Marie, by
 " even and equall portions, during their natural lives, and the lives
 " of everie of them, respectively, together with all fees, profits, com-
 " modities, allowances, and advantages whatsoever to the said places
 " incident and belonging, in as large and ample manner as any our
 " musicians in the same places heretofore, have had and enjoyed the
 " same; and theis presents, or the inrollment thereof, shall be your
 " sufficient warrant and dischardge in this behalfe. In witnes
 " whereof, &c.

(b) This, at the present valuation of money, would be near £.200 per annum. See *Chron. Preciosum*.

" Witnes

“ Witnes ourself at Westminster, the eleaventh day of July.

“ *Per breve de privato sigillo, &c.*” CHARLES.

The names, however, of such musicians as were in a more peculiar manner honoured with this prince's notice, afterwards, do not appear in the grant ; as it was observed, that his majesty was particularly delighted with the choral compositions of Dr. Child ; the performance on the lute of Dr. Wilson ; and the Music of William and Henry Lawes, which was introduced in the masques that were exhibited at court.

The productions for the *Church* during this reign, though superior in excellence to those of any other species, yet, if we except those of Dr. Giles and Elway Bevin, who more properly belong to the reign of king James, are so few in number, that the augmentation they make to our former stock lies in a very small compass.

Dr. WILLIAM CHILD, according to Ant. Wood was a native of Bristol, and disciple of Elway Bevin. In 1631, being then of Christ-church College, Oxford, he took his degree of bachelor in Music ; and, in 1636, was appointed one of the organists of St. George's Chapel at Windsor, in the room of Dr. John Munday, and soon after one of the organists of the Royal Chapel at Whitehall. After the Restoration he was appointed chanter of the King's Chapel, and one of the chamber musicians to Charles II. In 1663, the university of Oxford conferred on him the degree of doctor in Music, at an act celebrated in St. Mary's Church. Dr. Child, after having been organist of Windsor Chapel sixty-five years, died in that town, 1697, at ninety years of age. In the inscription on his grave-stone, in the same chapel, it is recorded that he paved the body of that choir at his own expence ; he likewise gave £. 20 towards building the town-hall at Windsor, and £. 50 to the corporation to be disposed of in charitable uses, at their discretion (c).

(c) The following epitaph is also on his grave-stone in St. George's Chapel :

“ Go happy soul, and in thy seat above
“ Sing endless hymns of thy great Maker's
“ love.

“ How fit in heavenly songs to bear a part !
“ Before well practis'd in the sacred art ;

“ Whilst hearing us, sometimes the choire
“ divine,

“ Will sure descend, and in our consort join ;

“ So much the Musick thou to us hast given,

“ Has made our earth to represent their
“ heaven.”

His works are "Psalms for three voices, &c. with a continued
 "base either for the organ or theorbo, composed after the Italian
 "way. London, 1639. Catches, Rounds, and Canons, pub-
 "lished in Hilton's *catch that catch can*, 1652. Divine Anthems
 "and compositions to several pieces of poetry, some of which were
 "written by Dr. Thomas Pierce of Oxford." Some of his secular
 compositions likewise appeared in a book entitled *Court Ayres*, print-
 ed 1655, which will be mentioned hereafter. But his principal
 productions are his services and full anthems, printed in Dr. Boyce's
 collection. His service in E minor has something more varied and
 interesting, in the modulation, than in most of his other works; and
 in his celebrated service in D sharp, there is a glow of rich harmo-
 ny, which, without any great compass of genius or science, is ex-
 tremely pleasing, the more so, perhaps, from being composed in a
 key which is more perfectly in tune than most others on the organ.
 His full anthems are not without imagination and fire. Page 97,
 (Boyce, Vol. II.) "and upon our solemn feast-day, &c." the modu-
 lation and contrivance are admirable to the end of the anthem. His
 style was so remarkably easy and natural, compared with that to
 which choirmen had been accustomed, that it was frequently treated
 by them with derision. Indeed, his modulation, at present, is so near-
 ly modern, as not to produce that solemn, and, seemingly, new ef-
 fect on our ears, which we now experience from the productions of
 the sixteenth century (*d*).

ADRIAN BATTEN, organist and vicar-choral of St. Paul's during
 the reign of Charles I. and II. was merely a good harmonist of the
 old school, without adding any thing to the common stock of ideas in

(*d*) Farrant and Dr. Child were the two
 first English composers for the Church who
 in setting the *Te Deum*, have accented the
 word *holy* right. Indeed, both give a liga-
 ture to it the first time, though the second
 is correct. Child has erred, however, (p.
 147, Boyce Vol. I.) at "thē glorious." And p. 155, the sharp 3d and flat 6th twice
 used, prove, that his ear was not offended
 with their effect. The young musical stu-

dent will do well neither to imitate this,
 otherwise respectable composer, in such a
 combination, nor in that of $\frac{5}{4}$ (Boyce, Vol.
 II. l. ii. bar 1.) though it sometimes ap-
 pears in the works of the best masters of the
 sixteenth century. There are several in-
 edited and valuable compositions by Dr.
 Child preserved in Dr. Tudway's manuscript
 "Collection of English Church Music,"
 British Museum.

melody

melody or modulation with which the art was furnished long before he was born. Nor did he correct any of the errors in accent with which former times abounded (*e*). So that his imitations of anterior composers were entire. He seems to have jogged on in the plain, safe, and beaten tract, without looking much about him, nor if he had, does he seem likely to have penetrated far into the musical *terra incognita*.

THOMAS TOMKINS, the son of Thomas Tomkins, chanter of the choir at Gloucester, was of a family that produced more able musicians, during the sixteenth and seventeenth centuries, than any other which England can boast. He had several brothers, musicians, who distinguished themselves both in composition and performance; among whom was Giles Tomkins, according to Anthony Wood, a most excellent organist of the cathedral at Salisbury; John Tomkins, organist of St. Paul's cathedral, and afterwards gentleman of the Chapel Royal; and Nicholas Tomkins, one of the gentlemen of the privy chamber to Charles I. Thomas, the subject of the present article, the disciple of Bird, and bachelor of Music, was afterwards organist of the cathedral of Worcester, gentleman of his majesty's chapel, and, at length, organist. Though he contributed to the *Triumphs of Oriana* in the reign of queen Elizabeth (*f*), he was living after the breaking out of the grand rebellion, about which time he published a work in ten books or separate parts, entitled *Musica Deo sacra et Ecclesiae Anglicanae*, consisting of anthems, hymns, and other compositions suited to the church service (*g*).

A set

(*e*) In the word *kindēfs*, which is thrice repeated in his anthem, "O praise the Lord," the accent is thrown on the second syllable, see Boyce, Vol. II. p. 76. Take heed—vēxēd—wīthīn—hād wings—like ā dove! In his anthem, "Deliver us O Lord," the want of a B flat in the second bar is disagreeable, and renders the key very equivocal.

(*f*) See above, p. 133 and 337.

(*g*) The copy of these compositions, in Christ-church Coll. Oxford, is dated 1664. If this was not a second edition, it is proba-

ble, that his son was either the author, or at least the editor of the work. By a copy of his songs, in the same collection, that have been said above to be of uncertain date, they appear to have been printed 1622.

Butler, in his *Principles of Musick*, published 1636, speaking of the *Lydian mood* of the ancients, which he seems to have persuaded himself he understood, says, "of this mood is that passionate lamentation of the musical king, for the death of his son *Abalom*, composed in five parts by Mr. Thomas Tomkins, now organist of his majesty's chapel."

A set of his vocal Church Music, in four and five parts, MS. is lodged in Magdalen College, and a printed copy in Christ-church, Oxford. The manuscript copy was presented to Magdalen College by *James Clifford*, who, in 1663, published a collection of the words, with the names of the composers of such services and anthems as continued to be sung in our cathedrals. To this book Ant. Wood and others frequently refer in speaking of our choral Music.

Besides the compositions by Tomkins, mentioned above, in the collection made for Lord Harley, Brit. Mus. there are likewise several very learned and curious compositions by this author; particularly full anthems in eight, ten, and twelve real parts, *fugato*. About this time there was a rage for multiplying parts in musical compositions, all over Europe; and Herculean labours of this kind, atchieved by Tallis, Bird, Benevoli, and others, have been already mentioned.

The attention and favour constantly bestowed on our choral service by Charles I. perhaps stimulated JOHN BARNARD, minor canon of St. Paul's cathedral, to publish, in 1641, dedicated to his majesty, the first book of the following admirable collection of English Church Music, consisting of "Services and Anthems, such as are
" now used in the cathedrals and collegiate churches of this kingdom,
" never before printed, whereby such books as were heretofore with
" much difficulty and charges transcribed for the use of the quire,
" are now, to the saving of much labour and expence, published for
" the general good of all such as shall desire them either for public
" or private exercise. Collected out of divers approved authors by
" John Barnard, one of the minor canons of the cathedral church
" of St. Paul. London, printed by Edward Griffin, and are to be
" solde at the signe of the three lutes, in Paul's alley, 1641." Two years after this valuable collection was published, organs were ordered to be taken down, and cathedral service abolished!

" chapel. The melodious harmony of
" which, when I heard it in the Music-
" school (Oxon), whether I should more
" admire the sweet well governed voices,
" with consonant instruments, of the fingers,

" or the exquisite invention, wit, and art of
" the composer, it was hard to determine."
Page 5. And p. 92, he calls Mr. Thomas
and Mr. J. Tomkins *aureum par Musicorum*.

It

It is much to be lamented, that the publications of Barnard and Tomkins were not in *score*, as a complete copy of all the several parts of either cannot now perhaps be found out of Oxford, in the whole kingdom! Each of the separate parts of Barnard's collection was printed in folio, and contained services for morning and evening, and the communion, preces, and responses, by the following fathers of our Church Music: Dr. Tye, Tallis, Bird, Morley, Strogers, Bevin, Orlando Gibbons, Mundy, Parsons, Dr. Giles, and Woodson; with the litany by Tallis, and a great number of full anthems, in four, five, and six parts, by Tye, White, Farrant, Shepherd, Bull, Parsons, Morley, Hooper, Mundy, Giles, Gibbon, Batten, Weelkes, and Ward.

Though the following masters are not the immediate authors of choral compositions, yet, as their productions are chiefly of a sacred kind, this seems a proper place in which to mention them.

MARTIN PIERSON, bachelor in Music, and master of the choristers of St. Paul's, when John Tomkins was organist of that cathedral, published "Mottects, or grave Chamber Musique, containing songs of five parts of severall sorts, some full, and some verse and chorus, but all fit for voyces and vials, with an organ part; which for want of organs may be performed on virginals, base-lute, bandora, or Irish harpe. Also a mourning song of sixe parts for the death of the late Hon. Sir Fulke Grevil, knight, composed according to the rules of art, by M. P. bachelor of Musique, 1630." This musician died about 1650; and bequeathed £. 100 to the poor of Marsh, in the parish of Dunnington, and isle of Ely, to be laid out in a purchase for their annual use. His partiality for this village, in the heart of the fens, probably arose from its being the place of his birth.

RICHARD DEERING, bachelor in Music, a composer much respected in his time for purity of harmony and gravity of style, was of an ancient baronet's family in Kent which still subsists, and had his musical education in Italy; where, according to Ant. Wood (*Fasti Oxonienses*) "he obtained the name of a most admirable musician." On his return from that country, he exercised his profession in England

land with great reputation, till, being a Roman Catholic, and prevailed on by urgent entreaties, he accepted the place of organist to the English nuns at a convent in Bruxelles. At length, after the marriage of Charles I. he returned to England on being appointed organist to his queen Henrietta, in whose service he continued till, by the turbulence of the times, he was forced to leave the kingdom. His works consist of *Cantiones sacræ quinque Vocum, cum basso continuo ad Organum*, Antwerp, 1597; *Cantica sacra ad Melodiam Madrigalium elaborate senis Vocibus*, Antwerp, 1618; *Cantica sacra duas et tres Voces composita cum basso continuo ad Organum*, London, 1662, dedicated by the editor, John Playford, to the Queen Dowager, the author having been dead four or five years. A second set of *Cantica sacra* was published in 1674, composed by Deering, Dr. Christ. Gibbons, Ben Rogers, Matthew Lock, and others.

Deering's compositions, of which I have scored several, are in a very sober, innocent, psalmodic, dry, and uninteresting style; for though he seems to have been a regular-bred and correct contrapuntist, yet I have never been able to discover in any of his works a single stroke of genius, either in his melody or modulation.

There are anthems both by William and Henry Lawes in Dr. Tudway's collect. Brit. Mus. which belong to this reign; but they do not enable us to account for the great reputation which these musicians so long enjoyed. There is, however, in the same collection, an anthem in four parts, by John Hilton: "Lord for thy tender mercy's sake," which has considerable merit on the side of air, as well as harmony.

Masques appear to have been still more the favourite amusements of the court during the early and tranquil part of this reign than in that of James; and the queen, who seems to have brought with her from France, at least as great a love for *dramatic exhibitions* as she found here, frequently represented the principal character in the piece herself. Most of the court masques were written by Ben Jonson, who, in his station of poet-laureat, seems to have furnished more of these dramas, than birth-day or new-years odes.

In 1630, he produced his masque entitled *Love's Triumph*, which
was

was decorated by Inigo Jones, and performed by the king and thirteen noblemen and gentlemen at court. And the same year, another, called *Chloridia*, which was represented by the queen and ladies of the court. In 1631, among several other court dramas, *Tempe restored*, a masque written by Aurelian Townshend, and decorated by Inigo Jones, was performed by her majesty and fourteen ladies. But, in 1633, there were no less than five masques performed at different places before the king and court. A very circumstantial account of one of these has been left in a manuscript, by lord commissioner Whitelocke, which is now the property of Dr. Morton of the British Museum.

This masque, entitled *the Triumphs of Peace*, and written by James Shirley, a dramatist of the second class, in the reign of Charles I. and author of near forty plays, was acted at Whitehall, and the whole expence defrayed by the gentlemen of the four inns of court, as a testimony of duty and loyalty, on his majesty's return from Scotland, after terminating the discontents in that kingdom. As the subject is closely connected with the history of dramatic Music, during this period, I shall give, from the authentic narrative with which I have been favoured, such passages as are most characteristic of the times, in the author's own words.

“ About Allhollantide this year (1633), severall of the principal
 “ members of the fower Innes of court, amongst whom, some were
 “ servaunts of the king, had a designe that these Innes of court should
 “ present their service to the king and queen, and testify their affec-
 “ tions to them, by the outward and splendid visible testimony of
 “ a royall MASQUE of all the 4 societies joyning together, to be
 “ by them brought to the court, as an expreſſion of their love and
 “ dutie to their majesties.

“ This was hinted att in the court and by them intimated to the
 “ chiefe of those societies, that it would be well taken from them,
 “ and some held it the more seasonable, bicause this action would
 “ manifest the difference of their opinion from Mr. Prynne's new
 VOL. III. O o learning,

“ learning, and serve to confute his *Histrion-mastix* against enter-
 “ ludes (*b*).

“ This designe tooke well with all the Innes of court, especially
 “ the younger sort of them, and in order to putt it in execution, the
 “ benchers of each society mett, and agreed to have this solemnity
 “ performed, in the noblest and most stately manner that could be
 “ invented.

“ The better to effect this, it was resolved, in each house to
 “ choose two of their members, whom they should judge fittest for
 “ such a busines, to be a committe, by joint assistance to carry on
 “ that affayre.

“ In the middle Temple were chosen of this committee Mr.
 “ Edward Hyde and Whitelocke (the author) ; for the Inner Tem-
 “ ple, Sir Edward Herbert, and Mr. Selden ; for Lincoln’s Inne,
 “ Mr. Attorney Noy, and Mr. Gerling ; and for Greyes Inne, Sir
 “ John Fynch, and Mr. —.

“ This committee being empowered by the benchers made severall
 “ sub-committees, one of which was to take care of the poeticall
 “ part of the busines ; another of the properties of the masques and
 “ antimasquers, and other actors ; another of the properties of the
 “ masquers and antimasquers, and other actors ; another of the
 “ dauncing ; and to me, in particular, was committed the whole
 “ care and charge of all the Musicke for this great masque.

“ I made choice of Mr. Symon Ives, an honest and able musi-
 “ tian, of excellent skill in his art, and of Mr. Lawes, to compose
 “ the aiers, lessons, and songs for the masque, and to be masters of
 “ all the Musicke under me (*i*).

“ I also

(*b*) This virulent book was published the preceding year, and in the table of contents referring to that part of his work which treated of female players, it having been said, “ women actors notorious whores,” it was construed into a reflexion on the queen and her ladies, who frequently performed in Court-masques ; and he was sentenced, in the star-chamber, to be imprisoned for life, fined £. 5000, expelled Lincoln’s

Inn, “ disbarred and disqualified to practise the law, degraded of his degree in the university, to be set in the pillory, his ears cut off, and his book burnt by the hands of the common hangman ; which rigorous sentence,” says Whitelock, “ was as rigorously executed.”

(*i*) The compositions of Simon Ives are not devoid of merit ; some of his Rounds and Catches, published in Hilton’s collection

“ I also made choice of 4 of the most excellent musitians of the
 “ Queen’s Chapell, M. La Ware, M. Du Val, M. Robert, and
 “ M. Mari, with divers others of forrein nations, who were most
 “ eminent in their art, not in the least neglecting my own country-
 “ men, whose knowledge in Musicke rendered them useful in this
 “ action, to beare their parts in the Musicke, which I resolved if
 “ I could to have so performed, as might excell any that ever before
 “ this time had bin in England.

“ Herein I kept my purpose, causing the meetings of all the mu-
 “ sitians to be frequent at my house in Salisbury Court; and there
 “ I have had together att one time, of English, French, Italian, Ger-
 “ man, and other masters of Musicke, fourty lutes, besides other
 “ instruments, and voyces of the most excellent kind in consort.

“ The time for presenting this masque at Whitehall was agreed
 “ to be on Candlemas night to end Christmas, and the severall parts
 “ of it being brought neer to a readines for action, Hyde and
 “ Whitelocke were sent to the lord Chamberlain, the earle of Pem-
 “ broke and Montgomery, and to Sir Henry Vane, the comptroller
 “ of the king’s house, to advise with them, to take order about the
 “ sceane, and preparing things in the banquetting house.

“ The dauncers, masquers, antimasquers, and musitians did before
 “ hand practise in the place where they were to present the masque,
 “ and the sceanes were artfully prepared (by Inigo Jones) att the
 “ lower end of the banquetting house, and all things were in ready-
 “ nefs.

“ The grand masquers were fower gentlemen of each Innes of
 “ court, most suitable for their persons, dauncing, and garbe for
 “ that buisnes, and it was ordered, that they should be drawne in
 “ fower rich chariotts, fower masquers in each chariot, by six horses
 “ in each.

tion, still live, and are ingenious and plea-
 sant: as, “ Come honest friends and jovial
 “ boys, &c.” Though the commissioner
 does not tell us which Lawes it was, he
 chose for Ives’s colleague, it appears, in
 the words of the masque, published by the
 author, Ja. Shirley, that it was William.

The names of all the masquers, with the
 house or inn of court to which they belong-
 ed, and an epigram addressed to each, was
 published in a little book, written by Francis
 Linton, called *The Innes of Court Anagram-
 matist, or The Masquers masqued in Ana-
 grammes*, 4to. 1634.

“ And to prevent difference about the order of their going, it was
“ propounded by Wh. and assented to by the committee, that the
“ chariots should be made after the fashion of the Roman tryum-
“ phant chariots, and being of an ovall forme in the seats, there
“ would be no difference of place in them.

“ For the severall colours, and from the precedence of the cha-
“ riots, it was agreed, that one of each house, of the committee,
“ should throwe the dice, and as that happened, the society to be
“ bound of which he that threw was a member.

“ I threw the dice for the middle Temple, and by my cast, had
“ the place for the second chariot, and silver and blew for my co-
“ lours, which colours, I have ever since kept in my liveries, and
“ uppon all solemn occasions.

“ Candlemas day being come, and all things being in readyness,
“ the masquers, horsemen, musitians, dauncers, and all that were ac-
“ tors in the buisnes, sett forth from Ely house, in Holborne, every
“ one in their order, towards Whitehall, their way being directed
“ through Chancery-lane, and from thence through Temple Barre,
“ and so the high way to the court.

“ The first that marched were twenty footmen in scarlet liveries
“ with silver lace, each one having his sword by his side, a baton in
“ one hand, and a torch lighted in the other, these were the mar-
“ shalls men, who cleered the streets, made way, and were all about
“ the marshall waiting his commands.

“ After them, and sometimes in the midst of them, came the
“ marshall, Mr. Darrell, afterwards knighted by the king, an extra-
“ ordinaey handsome, proper gentleman, one of Lincoln's Inne, a-
“ greed uppon by the committee for this service.

“ He was mounted uppon one of the king's best horses, and rich-
“ est saddles, and his own habit was exceeding rich and glorious,
“ his horsemanship very gallant, and, besides his marshall men, he
“ had two lacquayes, who carried torches by him, and a page in li-
“ very, that went by him carrying his cloake.

“ After him followed one hundred gentlemen of the Innes of
“ court in very rich clothes, five and twenty chosen out of each
“ house,

“ house, of the most proper and handsome young gentlemen of the
“ societies.

“ Every one of them was gallantly mounted, on the best horses,
“ and with the best furniture, that the king’s stable and the stables
“ of all the nobility in towne could afforde, and they were forward
“ on this occasion to lend them.

“ The richness of the apparell and furniture, glittering by the
“ light of the multitude of torches attending them, with the motion
“ and stirring of their mettled horses, and the many and various gay
“ liveries of their servants, butt especially the personal beauty and
“ gallantry of the handsome young gentlemen made the most glori-
“ ous and splendid show, that ever was beheld in England.

“ After the horsemen came the antimasquers, and as the horse-
“ men had their Musicke, about a dozen of the best trumpets,
“ proper for them, so the first antimasque, being of cripples and
“ beggars on horseback, had their Musicke of keys and tonges, and
“ the like, snapping and yett playing in consort before them. These
“ beggars were mounted on the poorest, leanest jades that could be
“ gotten out of the dust-cartes or elsewhere, and the variety and
“ change from such noble Musicke and gallant horses as went be-
“ fore them, unto their pittiful Musicke and horses, made both of
“ them the more pleasing.

“ After the beggars antimasque came men on horsebacke playing
“ uppon pipes, whistles, and instruments, sounding notes like those
“ of birds of all sorts, and in excellent consort, and were followed
“ by the antimasque of birdes. This was an owle in an ivy bush,
“ with many severall sorts of other birdes, in a cluster about the
“ owle gazing as it were upon her, these were little boys putt into
“ covers of the shapes of those birds, rarely fitted, and sitting on
“ small horses, with footmen going by them, having all of them
“ torches in their hands.

“ After this antimasque came other musitians on horsebacke play-
“ ing uppon bagpipes, hornepipes, and such kind of northerne
“ Musicke. First in this antimasque rode a fellow upon a little
“ horse with a great bitt in his mouth, and uppon the man’s head

“ was

“ was a bitt with headstall and raines, fastened, and signified a projector, that none in the kingdome might ride their horses, butt
 “ with such bitts as they should buy of him. Another projector,
 “ who begged a patent of monopoly to feed capons with caretts, and
 “ severall other projectors were in like manner personated, which
 “ pleased the spectators the more, bicause by it, an information was
 “ covertly given to the king, of the unfittness and ridiculousness of
 “ these projects, against the law, and the attorney Noy who had
 “ most knowledge of them, had a great hand in this antimasque of
 “ the projectors.

“ After this and severall other antimasques were past, there came
 “ fixe of the chiefe musitians on horsebacke, uppon footclothes,
 “ and in the habits of Heathen priests, and footmen carrying of
 “ torches by them. Then a sumptuous chariot drawn by fixe horses
 “ with large plumes of feathers, in which were about a dozen persons in severall habits of gods and goddeses. Then other large
 “ open chariots with musitians in like habit, butt all with some variety and distinction. These going before the grand masquers
 “ played on excellent loude Musicke all the way as they went.

“ The chariot in which sate the 4 grand masquers of Grayes
 “ Inne was drawn by 4 horses all on breast, coursed to their
 “ heeles all over with cloth of tiffue, of the colour of crimson
 “ and silver, huge plumes of red and white feathers on their
 “ heads and buttockes, and the coachman's cap and feather,
 “ his long coate and his very whippe and cushion, of the same stuffe
 “ and colour. These maskers had habits, doublets, trunke-hose
 “ and cappes of the most rich cloth of tiffue, and wrought as thicke
 “ with silver spangles as they could be placed, with large white filke
 “ stockings up to their trunke hose, and rich sprigges in their cappes,
 “ themselves proper and beautiful young gentlemen. On each
 “ side of the chariot were 4 footmen in liveries of the colour of
 “ the chariot, carrying huge flambois in their hands, which with
 “ the torches gave such a lustre to the paintings, spangles and habits,
 “ that hardly any thing could be invented to appear more glorious.

“ After this followed the other three chariots with the grand masquers

“ quers of the Middle Temple, Inner Temple, and Lincoln’s Inne,
 “ alike richly habited and attended ; and as the fixeteen grand mas-
 “ quers were most handsome and lovely, and the equipage so full of
 “ state and height of gallantrye, it may be said, that it never was out-
 “ done by any representation mentioned in our former glories.

“ The torches and flaming huge flambois, borne by the side of each
 “ chariot, made it seem lightsome as att noon day, butt more glitter-
 “ ing, and gave a full and clear light to all the streets and windowes
 “ as they passed.

“ The marche was slowe, in regard of their great number, butt
 “ more interrupted by the multitude of the spectators, in the streets,
 “ besides the windowes, and they all seemed loth to part with so glo-
 “ rious a spectacle.

“ This gave opportunity to Hyde and Whitelocke, who usual-
 “ ly were together, to take a coach, and by the other way, to gett
 “ before them to Whitehall, where they found the fayre banquetting
 “ house, so crowded with fayre ladyes, glistering with their rich
 “ clothes, and richer jewells, and with lords and gentlemen of great
 “ quality, that there was scarce roome for the king and queen to
 “ enter in. They saw that all things were in readines there, and
 “ the lord Chamberlein carryed them up to the chamber of the
 “ beautiful and ingenious countess of Caernarvon his daughter,
 “ whose company was no smalle pleasure and refreshment.

“ The king and queen stood at a windowe, looking streight for-
 “ ward into the street, to see the masque come by, and being de-
 “ lighted with the noble bravery of it, they sent to the mar-
 “ shall to desire that the whole show might fetch a turne about the
 “ Tiltyard, that their majestyes might have a double view of them;
 “ which was done accordingly, and then they allighted att White-
 “ hall gate, and were conducted to severall roomes and places pre-
 “ pared for them.

“ The horsemen of the masque, and other gentlemen of the Innes
 “ of court, fate in the gallery reserved for them, and those of the
 “ committee that were present were with them ; only Hyde and
 “ Whitelocke were placed below among the grandees, and neare the
 “ scene

“ sceane, that they might be ready to give assistance, if there should
“ be occasion, and as an extraordinary favour to them att that time,
“ and in that presence.

“ The king and queen and all their noble train being come in,
“ the masque began, and was incomparably performed, in the daunc-
“ cing, speeches, Musicke, and sceanes; the daunces, figures, proper-
“ ties, the voices, instruments, songs, aiers, composures, the words
“ and actions were all of them exact, none fayled in their parts, and
“ the sceanes were most curious and costly.

“ The queen did the honour to some of the masquers to daunce
“ with them herselfe, and to judge them as good dauncers as ever
“ she sawe, and the great ladyes were very free and civill in daunc-
“ ing with all the masquers as they were taken out by them.

“ Thus they continued in their sports untill it was almost morn-
“ ing, and then the king and queen retiring, the masquers and Innes
“ of court gentlemen were brought to a stately banquet, and af-
“ ter that was dispersed, every one departed to his own quarters.

“ The queen, who was so delighted with these solemnities, desired
“ to see this show acted over again. Whereupon, an intimation be-
“ ing given to my lord Major of London, he invited the king and
“ queen and the masquers to the citty, and entertained them with
“ all state and magnificence, att Merchant Taylor’s hall. Thither
“ marched through the citty, the same show that went to White-
“ hall, and the same masque was again represented in the same state
“ and equipage as before. This also gave great contentment to their
“ majestyes, and no less to the cittizens, especially those of the
“ younger sort, and of the female sexe, and it was to the great ho-
“ nour and no less charge of the lord Major and freemen.

“ After these dreames past, and these pompes vanished, all men
“ were satisfied by the committee justly and bountifully.

“ For the Musicke, which was particularly committed to my
“ charge, I gave to Mr. Ives, and to Mr. Lawes £.100 a piece,
“ for their rewards; for the 4 French gentlemen, the queen’s ser-
“ vants, I thought that a handsome and liberall gratifying of them
“ would be made known to the queen, their mistress, and well taken
“ by her. I therefore invited them one morning to a collation, att
“ St.

“ St. Dunstan’s taverne, in the great room, the oracle of Apollo,
 “ where each of them had his plate lay’d for him, covered, and the
 “ napkin by it, and when they open’d their plates they found in each
 “ of them forty pices of gould, of their master’s coyne, for the first
 “ dish, and they had cause to be much pleased with this surprisall.

“ The rest of the musitians had rewards answerable to their parts
 “ and qualities ; and the whole charge of the Musicke came to
 “ about one thousand pounds. The clothes of the horsemen re-
 “ koned one with another at £. 100 a suit, att the least, amount-
 “ ed to £. 10,000. The charges of all the rest of the masque,
 “ which were borne by the societies, were accounted to be above
 “ twenty thousand pounds.

“ I was so conversant with the musitians, and so willing to gaine
 “ their favour, especially at this time, that I composed an Aier my-
 “ selfe, with the assistance of Mr. Ives, and called it *Whitelocke’s*
 “ *Coranto* ; which being cried up, was first played publicly, by
 “ the Blackefryar’s Musicke, who were then esteemed the best
 “ of common musitians in London. Whenever I came to that
 “ house (as I did sometimes in those dayes), though not often, to
 “ see a play, the musitians would presently play *Whitelocke’s Coran-*
 “ *to*, and it was so often called for, that they would have it played
 “ twice or thrice in an afternoon. The Queen hearing it, would
 “ not be perswaded that it was made by an Englishman, bicause she
 “ said it was fuller of life and spirit than the English aiers use to be ;
 “ butt she honoured the *Coranto* and the maker of it with her ma-
 “ jestyes royall commendation. It grew to that request, that all
 “ the common musitians in this towne, and all over the kingdome,
 “ gott the composition of it, and played it publicly in all places,
 “ for above thirtie years after.”

Among other moral reflexions, addressed to his family, on such
 vanities as he had been describing, lord commissioner Whitelocke
 adds : “ yet I am farre from discommending the knowledge of this
 “ art (Music), and exercise of this recreation for a diversion, and so
 “ as you spend not too much of your time in it, that I advise you

“ in this as in other accomplishments, that you endeavour to gett to
“ some perfection, as I did, and it will be the more ornament and
“ delight to you. I have here inserted this Aier, in order to pre-
“ serve it for your use, if any of you shall delight in it (k).

Whitelocke's Coranto.

(k) Whitelocke's labours remembered in his children, MS.
the annales of his life, written for the use of

The same year, besides the *Faithful Shepherdess* of Fletcher, which was represented at court, to which Sir William Davenant furnished a kind of prelude, or prologue, which was set to Music, the masque called *Cælum Britannicum*, written by Thomas Carew, was performed at Whitehall, by the King, Queen, duke of Lenox,

P p 2

earls

earls of Devonshire, Holland, and many other nobles of the court (*l*).

Inigo Jones was the machinist, and Henry Lawes the musician. The vocal Music, however, was only introduced at the latter end, where about a hundred verses were sung.

In 1634, an *Entertainment*, entitled *Love's Welcome*, written by Ben Jonson, was represented before their majesties at *Bolsover*, the seat of the earl of Newcastle. But this year furnishes a memorable æra in the annals of Poetry and Music, by having given birth to the *Mask of Comus*.

This drama, written by Milton, was set by Henry Lawes, who performed in it the part of *Thyrsis*; and, in 1637, being likewise the editor of the poem, when it was first published, dedicated it to John Lord Viscount Brackley, who had represented the part of the Elder Brother, at Ludlow Castle.

This young nobleman was but twelve years old at the time of the exhibition. His brother, Thomas, who played the Second Brother, was still younger; and lady Alice Egerton, who acted the part of the Lady in *Comus*, could not be more than thirteen years old. These personages, and many more of the family, were buried at Gadesden, in Hertfordshire, where their monuments are still to be seen. The family lived at Ashridge, formerly a royal palace, in the parish of Gadesden, and still the residence of their illustrious descendant, the present duke of Bridgewater. Milton, when he wrote this mask, lived at Harefield, in the neighbourhood of Ashridge. The two brothers had appeared at court, 1633, in the mask of *Cælum Britannicum*, even before they performed in *Comus*. Their sister, lady Penelope Egerton, acted at court (or rather danced), with the queen in Ben Jonson's mask of *Chloridia*, 1630 (*m*).

A letter from Sir Henry Wootton to the author, concerning Co-

(*l*) Though the masques of this reign are frequently said, in the title-page, and *dramatis personæ*, to have been performed by the king, queen, and nobles of their court, yet it does not appear, that these great personages often took part in the dialogue or songs of the piece; but generally appeared on the stage in the splendid ballets only, as dancers, representing mythological or allegori-

cal characters. Indeed, the queen, at the time of the first masques of this reign, can hardly be supposed sufficiently exercised in our language to undertake a part in which declamation was necessary.

(*m*) See the notes of Mr. T. Warton's excellent edition of Milton's *Poems upon several Occasions*.

mus, is still extant; in which he says, "I should much commend
 " the tragical (serious) part, if the lyrical did not ravish me with a
 " certain Dorique delicacy in your songs and odes, whereunto I must
 " plainly confess to have seen yet nothing parallel in our language:
 " *Ipsa mollities.*" This letter is dated 1638, and first appeared pre-
 fixed to *Comus*, in the edition of 1645, when the author first set
 his name to the poem.

Comus was published, by Lawes, without the author's name,
 which Sir H. Wootton, in 1638, thanks Milton himself for disclof-
 ing to him by letter. The editor, in his dedication to lord Brack-
 ley, says, that "although not openly acknowledged by the the au-
 " thor, yet it is legitimate offspring, so lovely, and so much to be
 " desired, that the often copying of it hath tired my pen, to give
 " my severall friends satisfaction, and brought me to the necessity
 " of producing it to the publick view."

Milton put a fine eulogium on the musician Lawes, into his
 own mouth, in the character of the Attendant Spirit, who says,

"——but I must put off
 " These my sky robes, spun out of Iris woof,
 " And take the weed and likeness of a swain,
 " That to the service of this house belongs (n),
 " Who with his soft pipe, and smooth-dittied song,
 " Well knows to still the wild winds when they roar,
 " And hush the waving woods, nor of less faith—(o)."

(n) Lawes taught Music in lord Bridge-
 water's family, and the lady Alice, who
 played the Lute in the mask, was his scho-
 lar. To this lady, nineteen years after,
 when she was lady Vaughan and Carbury,
 and to her sister Mary, lady Herbert of
 Cherbury, he dedicated the first book of his
AYRES AND DIALOGUES, for one, two,
 and three Voyces, &c. London. In his
 dedication to these ladies, he says, "no
 " sooner I thought of making these publick,
 " than of inscribing them to your ladyships;
 " most of them being composed when I was
 " employed by your ever-honoured parents
 " to attend your ladyships education in Mu-
 " sicke; who, as in other accomplishments,
 " fit for persons of your quality, excelled
 " most ladies, especially in vocal Musicke,

" wherein you were so absolute, that you gave
 " life and honour to all I set and taught you."

(o) Again, v. 494, an encomium is pro-
 nounced upon him, with more delicacy and
 propriety, by the *Elder Brother*:

"Thyrsis? whose artful strains have oft
 " delay'd
 " The huddling brook to hear his ma-
 " drigal,
 " And sweeten'd every musk-rose of the
 " dale!"

Yet still another is put into his own mouth,
 v. 623:

"He lov'd me well, and oft would beg
 " me sing,
 " Which when I did, he on the tender
 " grafs
 " Would sit, and hearken e'en to extasy."

A very

A very small part of this mask, in its original state, was sung: *Sweet Echo; Sabrina fair; Back shepherds back;* and the passages beginning, *To the ocean now I fly;* and *Now my task is smoothly done,* are said to have been all the portions of this drama that were set to Music by Henry Lawes; and this opinion is founded on a manuscript copy of the Music to these strains, in the composer's own hand-writing; however, besides the Music for the *measure*, or dance of Comus's attendants, between the verses 144 and 145, and the *soft Music*, prescribed before verse 659, we are told in the drama, after verse 889, that "Sabrina rises, attended by water-nymphs, and *sings,*

"By the rushy fringed bank, &c."

And before verse 966, it is said, "This *second song* presents them " (the two brothers and the lady) to their father and mother."

So that though no more of the original Music is to be found than that said to subsist in the composer's own hand writing, yet more seems to have been produced, even by Milton's own direction.

The notes set by Lawes to the song of *Sweet Echo*, neither constitute an *air*, nor *melody*; and, indeed, they are even too frequently prolonged for *recitative*. It is difficult to give a name, from the copious technica with which the art of Music is furnished, to such a series of unmeaning sounds. Nor does the composer, otherwise than comparatively, seem to merit the great praises bestowed upon him by Milton and others for his "exact accommodation of the "accent of the Music and the quantities of the verse," which perhaps, without a very nice examination, has been granted to him by late writers. As no accompaniment, but a dry base, seems to have been given to this song by the composer, it is difficult to imagine how the Lady was able

"——to wake the courteous ECHO

"To give an *answer* from her mossy couch."

Here was a favourable opportunity suggested to the musician for instrumental *ritornels* and *iterations*, of which, however, he made no use.

I shall here present the critical reader with the song, as set by Lawes, and then refer to such places as seem indefensible, even on the side of *accent* and *quantity*.

Air in Comus, as originally set by Henry Lawes.

Sweet eccho sweetest nimphe, that liv'lt unseen - - within thy airy
shell, by flow - Me-an ders margent greene, and in the vi-o-
let embroider'd vale, where the love-lorn Night-in-gale nightly to thee her
fad song mourneth well, canst thou not tell me of a gentle
payre that lik - est thy Narcissus are O' if thou

haue hid them in some flow'ry caue tell me but where sweet

queen of par - ley daugh - ter of the sphere. So mayst thou

be transf - plant - ed to the skies and hold a coun - ter - point to

all heav'ns har - mo - nies.

The long note given to the first syllable of the word *violet*, to *sad* (*sad song*), *haue* (*have hid*), *sweet* (*sweet queen*), *tell* (*tell me*), and the first syllable of the word *daughter*, on the *unaccented* part of the bar, are all inaccuracies of musical accentuation. And in the last bar, line first of this page, the interval from F sharp to E natural, the seventh above, is certainly one of the most disagreeable notes in melody that the scale could furnish.

I should

I should be glad, indeed, to be informed by the most exclusive admirer of old ditties, what is the *musical merit* of this song, except insipid simplicity, and its having been set for a single voice, instead of being mangled by the many-headed monster, Madrigal?

In 1635, was performed at the duke of York's palace, in the Middle Temple, *The Triumphs of the Prince d'Amour*, a masque written by Sir William Davenant, of which the vocal and instrumental Music, with the symphonies, are said to have been composed by William and Henry Lawes. 1636, *The King and Queen's Entertainment, at Richmond*, a masque. Simon Hopper is said to have conducted the dancing, and Charles Hopper to have composed the Music. It was contrived expressly, for the queen to see prince Charles dance in it, who was then but six years old. In 1637, *Britannia Triumphans*, a masque, by Sir William Davenant and Inigo Jones, was performed at Whitehall; as was *Microcosmus*, another drama of the same kind, at the play-house in Salisbury Court; which seems to have been the first English masque represented on a public stage. *Luminalia*, or the *Festival of Light*, a masque, was also represented by the queen and the ladies of court, with decorations by Inigo Jones. 1638, *The Glories of Spring*, a masque, by Nabbs; and *The Temple of Love*, another, by Sir William Davenant, and represented by the Queen and her ladies at Whitehall, was one of the most magnificent of the times. In this drama about one hundred and fifty verses were sung.

In 1639, *Salmacida Spolia*, a masque, written likewise by Sir William Davenant, and set to Music by Lewis Richard, master of his majesty's Music (*p*), with machines and decorations by Inigo Jones, was the last drama of this kind in which their majesties condescended to perform in person. Other scenes more tragic and difficult to support, were preparing for these unfortunate princes, in which they exhibited, to the wondering world, a spectacle that required no mimic pathos to render it interesting!

During the reign of James I. the national rage for dramatic representations seems to have been excessive, as we are told that no less

(*p*) This musician's name has occurred no where else in my researches.

than seventeen play-houses were then open in London; and in that of his successor, though their number was considerably diminished, yet six were still allowed for the amusement of the public: however, as these were little better than booths, erected in tennis-courts, cock-pits, the large rooms of inns, taverns, ale-houses, or in the gardens or yards of such places, it does not appear that any one of them was sufficiently splendid or commodious for the reception of their majesties and the first personages in the kingdom; so that the royal passion for dramatic amusements vented itself wholly within the walls of the court, for the meridian of which the performance of masques was totally calculated. And the king, over whose countenance and reign his subsequent misfortunes seem to have cast such a gloom, at this time not only partook of all the innocent and decorous gaieties of his court, but sometimes, in particular masques, contributed to them himself, by his own performance (*q*).

This prince, however his judgment, or that of his counsellors, may have missed him in the more momentous concerns of government, appears to have been possessed of an invariable good taste in all the fine arts; a quality which, in less morose and fanatical times, would have endeared him to the most enlightened part of the nation: but now his patronage of poetry, painting, architecture, and Music, was ranked among the deadly sins, and his passion for the works of the best artists in the nation, profane, pagan, popish, idolatrous, dark, and damnable. As to the expences of his government, for the levying which he was driven to illegal and violent expedients, if compared with what has been since peaceably and chearfully granted to his successors, his extravagance in supporting the public splendor and amusements of his court, will be found more moderate, and perhaps more innocent, than that of *secret service* in later times; and however gloomy state-reformers may execrate this prince, it would be ungrateful, in professors of any of the fine arts, to lose all reverence for the patron of Ben Jonson, Vandyke, Inigo Jones, and Dr. Child.

(*q*) The early pictures of this prince exhibit a much more serene and chearful countenance than those that were painted during his troubles; particularly the admirable

whole length at Versailles, by Vandyke, which my worthy friend Sir Robt. Strange has so exquisitely engraved.

Charles

Charles I. very early in his reign manifested a disposition to encourage the liberal arts ; particularly Music, by the charter granted to Nicholas Lanier, already mentioned. In the eleventh year of his reign he granted a more extensive charter to the most eminent musicians living at the time, incorporating them by the style and titles of marshall, wardens, and cominality of the arte and science of Musick in WESTMINSTER, in the county of Middlesex ; investing them with various extraordinary powers and privileges, which charter he confirmed in the fourteenth year of his reign.

The patent roll of this charter, which bears date 15 Jul. xi. Car. is deposited in the Chapel of the Rolles ; of which the following is the purport.

“ Whereas Ed. IV. by his letters patent under the greate seale
“ of his realme of England, bearing date the foure and twentieth
“ day of Aprill, in the nyynth yeare of his reigne, did for him and
“ his heires give and graunte licence unto Walter Haliday Marshall
“ and John Cliff, and others, then minstrells of the said king, that
“ they by themselves should in deed and name be one body and
“ cominality, perpetual and capable in the lawe, and should have
“ perpetual succession: and that as well the minstrells of the said
“ king, which then were, as other minstrells of the said king, and
“ his heires which should be afterward, might at their pleasure name,
“ chuse, ordeine, and successively constitute from amongst them-
“ selves, one marshall able and fitt to remaine in that office during
“ his life, and alsoe twoe wardens every yeare, to governe the said
“ fraternity and guild.”

This charter being manifestly intended to counteract the power and effects of the musician's company in the city, recites that “ cer-
“ taine persons, suggesting themselves to be freemen of a pretended
“ society of minstrells in the cittie of London, in prejudice of the
“ previledges aforesaid——did by unlawful suggestions procure of
“ and from king James of ever blessed memory, letters patent—to
“ incorporate them by the name of master, wardens, and cominali-
“ ty of the arte or science of the musicians of London. And a-
“ mongst divers other priviledges, to graunte unto them the survey,

“scrutiny, correction, and government of all and singular the musicians and minstrells within the said cittie of London, suburbs, liberties, and precincts of the said cittie, or within three miles of the said cittie. By colour whereof they endeavoured to exclude the musicians and minstrells enterteyned into the king’s service, and all others expert and learned in the said arte and science of Musick, from teaching and practising the same within the said cittie, and three miles thereof, that would not subject themselves unto their said pretended fraternity, or purchase their approbation thereunto, although greate part of them were altogether unskilfull in the said art and science of Musick.”

It further recites, that “at the prosecution of Nicholas Lanier, Thomas Ford, Jerome Lanier, Clement Lanier, Andrew Lanier, Thomas Day, John Cogshall, Anthony Roberts, Daniell Farrant, John Lanier, Alfonso Ferabosco, Henry Ferabosco, Edward Wormall, and John Drewe, musicians enterteyned in the king’s service, a *scire facias* had bin brought in the king’s name against the said pretended master, wardens, and cominality of the art and science of the musicians of London, in the high court of Chancery, for the cancelling and making voide of the said letters patent; and that judgement at their said prosecution had been had and given by the said court accordingly, and the said letters patent vacated and cancelled thereupon.”

The king therefore, “for and in consideration of the good and faithful service which his said musicians had done and performed unto him, and in pursuance of the intent and meaning of the said king Edward the Fourth, in his said recited letters patent mentioned, of his speciall grace, certaine knowledge, and mere motion, DOETH for him, his heires and successors, will, ordeine, &c.”

The powers granted to this company extended throughout the whole realm of England, the county palatine of Chester only excepted, in favour of the ancient claim of the Dutton family to sovereignty over the minstrels of that palatinate (*r*); and none were suffered to exercise and practise the art or science of Music without a licence granted to them by this company, after trial of their abilities.

(*r*) See Vol. II. p. 359.

ties. Powers with which, it is to be feared, no men, or set of men, can ever be safely trusted: as envy, selfishness, and mere love of rule and importance, will incline them to shut the door on merit, as a more formidable crime and disqualification than dulness or the want of talents; instances of which unsempic spirit have, however strange, manifested themselves even in our own times.

From 1639, till the violent death of this monarch, every year was marked by some calamity or tragical event: in 1640, open discontents and preparations for rebellion; 1641, Strafford beheaded; 1642, civil war began; 1643, the liturgy and cathedral service abolished; 1644, archbishop Laud beheaded; 1645, the king obliged to quit Oxford, and take the field; 1646, being defeated at Naseby, he surrenders his person to the Scots, who deliver him to the parliament, by whom he is kept in different prisons till his execution, 1649.

The total suppression of cathedral service in 1643, gave a grievous wound to sacred Music; not only checking its cultivation, but annihilating as much as possible the means of restoring it, by destroying all the church-books, as entirely as those of the Romish communion had been at the time of the Reformation. Nothing now but syllabic and unisonous psalmody was authorised in the Church; organs were taken down, organists and choirmen turned adrift, and the art of Music, and indeed all the arts but those of killing, canting, and hypocrisy, were discouraged.

This accounts for much of the barbarism into which Music was thrown during the reigns of James and Charles I. which were wasted in an almost perpetual struggle between privilege and prerogative, democracy and tyranny; the crown fearful and unwilling to grant too much, and the people, almost all Puritans and Levellers, determined to be satisfied with nothing that could be offered, rendered approximation utterly impracticable.

During such contentions, what leisure or disposition could there be for the culture of arts which had no connexion with the reigning interests and passions of men? The fine arts have been very truly and emphatically called the *Arts of Peace*, and the celebrated
periods

periods in which they made the most considerable strides towards perfection, were calm and tranquil.

But no war is so fatal to elegance, refinement, and social comforts and amusements, as a *civil war*: it is not *national* hatred then, but *personal*, which sharpens the sword and actuates vengeance. In a foreign war, though we wish to humble and debilitate a rival *nation*, we pity, and often esteem, suffering individuals; but when the objects of animosity are near us, and in a manner irritate the sight, we never think we can be safe but by extirpation. We not only assail their persons and property, but every sublunary enjoyment. The Loyalists, in Charles's time, were attached to the hierarchy and ancient rites of the Church, which included the use of the organ, and the solemn and artificial use of voices; but if they had any one custom or enjoyment which excited in the Puritans a more acrimonious hatred towards them than another, it was that of celebrating religious rites with good Music. The Cavaliers, in their turn, were equal enemies to the coarse, vociferous and clamorous psalmody of the Puritans; so that a reciprocal and universal intolerance prevailed throughout the kingdom, during more than half a century: for though the mutual hatred of contending parties did not burst into open war till late in Charles's reign, it was secretly fermenting all the time his father sat on the throne; and, indeed, nothing but the vigour and vigilance of Elizabeth's government curbed the mutinous spirit of the times, while she was at the helm.

During the grand rebellion and interregnum, musicians who had employment either in the chapels royal, cathedrals, or public exhibitions in the capital, were forced to sculk about the country, and solicit an asylum in the houses of private patrons, whose mansions, and abilities to protect them, must have been very precarious. And, indeed, if they could have been rendered permanent, they would not so much have contributed to the advancement of the art, as the pride, effort, and emulation of working for a severe and fastidious public would have done. Many a man of creative genius and gigantic abilities, has been manacled by idleness, vanity, and self-applause in a private station, where, safe from rivals, and certain

of the approbation of a small, and perhaps ignorant and partial circle of friends, he has degenerated into listlessness, conceit, and affectation.

As there were few appeals to the public judgment in musical productions or performances during these turbulent times, the private patrons, as well as the professors of the art themselves, were easily satisfied; as appears by the wretched and vapid compositions that were published, and the unlimited praises bestowed on them in encomiastic verses, still worse than the Music.

But though the musicians selected by Charles, for his private concerts, were not men of great genius or abilities, yet his majesty cannot be accused of either ignorance or partiality in his choice of them, for the nation at that time could boast of no better.

William and Henry Lawes were at this time in such general favour, that though the kingdom was divided into factions, and men not only varied more in their principles, but disputed them with more violence, than at any other period of our history, yet there was but one opinion concerning the abilities of these musicians.

WILLIAM LAWES, the elder son of Thomas Lawes, a vicar-choral of the cathedral church of Salisbury, and a native of that city, was placed early in life under Coperario for his musical education, at the expence of the earl of Hertford*. His first preferment was in the choir of Chichester, but he was soon called to London, where, in 1602, he was sworn a gentleman of the Chapel Royal; which place, however, he resigned in 1611, and became one of the private, or chamber musicians, to Charles, then prince, and afterwards king. Fuller says, "he was respected and beloved of all such persons as cast any looks towards virtue and honour;" and he seems well entitled to this praise. He manifested his gratitude and loyalty to his royal master by taking up arms in his cause against the parliament. And though to exempt him from danger, lord Gerrard, the king's general made him a commissary in the royal army, yet the activity of his spirit disdaining this intended security, at the siege of

* This musician was an Englishman; but having been in Italy, at his return he changed his name from Cooper to *Coperario*.

Chester, 1645, he lost his life by an accidental shot. The king is said, by Fuller, to have been so affected at his loss, that though he was already in mourning for his kinsman lord Bernard Stuart, killed at the same siege, his majesty put "on *particular* mourning for his " dear servant William Lawes, whom he commonly called the *Father of Musick* (s)."

His chief compositions were *Fantafias* for viols, and songs and symphonies for *Masques*. Though his brother Henry, in the preface to the *Choice Psalmes* for three voices, which they published jointly, boasts that "he composed more than thirty several sorts of " Music for voices and instruments, and that there was not any instrument in use in his time but he composed for it as aptly as if " he had only studied that." In Dr. Aldrich's Collection, Christchurch, Oxon. there is a work of his called Mr. William Lawes's *Great Consort*, "wherein are six setts of Musicke, 6 books." His *Royal Consort* for two treble viols, two viol da gambas, and a *thorough-basse* (t), which was always mentioned with reverence by his admirers in the last century, is one of the most dry, awkward, and unmeaning compositions I ever remember to have had the trouble of scoring. It must, however, have been produced early in his life, as there are no bars, and the passages are chiefly such as were used in queen Elizabeth's time. In the music-school at Oxford are two large manuscript volumes of his works in score, for various instruments; one of which includes his original compositions for masques, performed before the king, and at the Inns of court.

His anthem for four voices, in Dr. Boyce's second volume, is the best and most solid composition that I have seen of this author; though it is thin and confused in many places, with little melody, and a harmony in the chorus, p. 201, which I am equally unable to understand or reconcile to rule or to my own ears. He must have been considerably older than his brother Henry, though they frequently composed in conjunction. I am, however, unable to clear up this point of primogeniture: Henry's name is placed first in the

(s) Wiltshire.

(t) Here the term *thorough base* occurs, without figures or reference to its being ac-

companied with chords, and only implies a *constant base*, without rests.

Choice Psalmes, published in 1648; in the preface to which he says, "as for that which is my part in this composition—it takes precedence of order only, not of worth." And yet he says of his own tunes just before, "they had their birth at the same time as his." Besides the psalms at the end of Sir William Davenant's masque called the *Triumphs of the Prince d'Amour*, 1635, it is said, that "the Musick of the songs and symphanies were excellently composed by Mr. William and Mr. Henry Lawes, his majesty's servants."

Several of the songs of William Lawes occur in the collections of the times, particularly in John Playford's *Musical Companion*, part the second, consisting of dialogues, glees, ballads, and ayres, the words of which are in general coarse and licentious. The dialogue part, which he furnished to this book is a species of recitative, wholly without accompaniment; and the duet at last, which is called a chorus, is insipid in melody, and ordinary in counterpoint. His boasted canons, published by his brother Henry at the end of their psalms, as proofs of his great abilities in harmony, when scored, appear so far from finished compositions, that there is not one of them totally free from objections, or that bears the stamp of a great master.

HENRY LAWES, the brother of William, was likewise a disciple of Coperario. By the cheque-book of the Chapel Royal it appears that he was sworn in Pisteller, in January 1625 (*u*), and in November following, gentleman of the Chapel; after this he was appointed clerk of the cheque, and one of the public and private musicians to king Charles I. As the reputation of Henry was still higher, and more firmly established than that of his brother, it seems to require more ample discussion.

I have examined with care and candour all the works I can find of this composer, which are still very numerous, and am obliged to own myself unable, by their excellence, to account for the great re-

(*u*) Skinner, Junius, Cotgrave, Howel, Baily, Johnson, and all the Lexicographers are silent concerning this word; and unless it implied a reader of the epistles, I am utter-

ly ignorant of its import. *Pissel*, in Chaucer, implies not only an epistle, but a short lesson. *Tyrwhitt*.

putation he acquired, and the numerous panegyrics bestowed upon him by the greatest poets and musicians of his time. His temper and conversation must certainly have endeared him to his acquaintance, and rendered them partial to his productions; and the praise of such writers as Milton and Waller is durable fame. Tallis, Bird, or Gibbons, who were all infinitely superior to Lawes, never had their abilities blazoned by cotemporary poets or historians of eminence. Fenton, the editor of Waller's works, tells us, that "the best poets of his time were ambitious of having their verses set to Music by this admirable artist;" and, indeed, he not only set some of the works of almost every poet of eminence in Charles I. reign, but of young noblemen and gentlemen who seem only to have tried their strength on the lyre for his use, and of whose talents for poetry no other evidence remains than what is to be found in Lawes's publications (x).

Waller has more than once bestowed his fragrant incense on this musician. Peck says, that "Milton wrote his masque at the request of Lawes;" but whether Milton chose Lawes, or Lawes Milton for a colleague in *Comus*, it equally manifests the high rank in which he stood with the greatest poets of his time. It would be illiberal to cherish such an idea; but it *does* sometimes seem as if the twin-sisters, Poetry and Music, were mutually jealous of each other's glory: "the less interesting my sister's offspring may be," says Poetry, "the more admiration will my own obtain." Upon asking some years ago, why a certain great prince continued to honour with such peculiar marks of favour an old performer on the flute, when he had so many musicians of superior abilities about him? I was answered, "because he plays *worse* than himself." And who knows whether Milton and Waller were not secretly influenced by some such consideration? and were not more pleased with Lawes

(x) In his first book of *Ayres and Dialogues* for one, two, and three voyces, published in 1653, four years after he lost his royal master and patron, besides a preface by himself, and encomiastic verses by Waller, Edward and John Phillips, the nephews of Milton, and others; there are songs,

some of them excellent, by Thomas earl of Winchelsea, William earl of Pembroke, John earl of Bristol, lord Broghill, Thomas Carey, son of the earl of Monmouth, Henry Noel son of lord Camden, Sir Charles Lucas, and Carew Raleigh, son of Sir Walter Raleigh.

for not pretending to embellish or enforce the sentiments of their songs, but setting them to sounds less captivating than the sense.

But *bad* as the Music of Lawes appears to us, it seems to have been *sincerely* admired by his cotemporaries, in general. It is not meant to insinuate that it was pleasing to poets *only*, but that it was *more* praised by them than any other Music of the same time. Though that of Lanier, Hilton, Simon Ives, Dr. Child, and others, seems preferable; and the poets, whose praise is fame, perhaps taught others to admire.

The time was now come for simplifying harmony and purifying melody in England, as well as in Italy; and the beginning of this enterprize was not fortunate here any more than in that country: harmony and contrivance were relinquished without a compensation. Simplicity, indeed, was attained; but devoid of accent, grace, or invention. And this accounts for the superiority of Church Music over secular at this period in every part of Europe, where canon, fugue, rich harmony, and contrivance, were still cultivated; while the first attempts at air and recitative were awkward, and the bases thin and unmeaning. Indeed, the composers of this kind of Music had the single merit to boast of affording the singer an opportunity of letting the words be perfectly well understood; as their melodies, in general, consisted of no more notes than syllables, while the treble accompaniment, if it subsisted, being in unison with the voice-part, could occasion no embarrassment or confusion.

But there seems as little reason for sacrificing Music to poetry, as poetry to Music; and when the sentiments of the poem are neither enforced nor embellished by the melody, it seems as if the words might be still better articulated and understood by being *read* or *declaimed* than when drawled out in such psalmodic *Ayres* as those of Henry Lawes and his cotemporaries. It has, however, been asked "whoever reads the words of a song but the author?" And there are certainly many *favourite songs*, which nothing but good Music and good singing could ever bring into notice. However, there are poems, I will not call them *songs*, on subjects of wit and science, which must ever be enfeebled by Music; while others,

truly lyric and confined to passion and sentiment, travel quicker to the heart, and penetrate deeper into the soul by the vehicle of melody, than by that of declamation (*y*). But the time is not yet come for these discussions: when there is no poetry truly lyric, there can be no graceful or symmetric melody; and, during the last century, there was certainly none which merited that title, in any language of Europe.

Though Henry Lawes severely censures the admirers of Italian Music in his preface, yet his first cantata, *Theseus and Ariadne*, is both in poetry and Music, an imitation of the famous scene in Monteverde's opera of *Arianna*, which was afterwards formed into a single heroic song, entirely like this, in *stilo recitativo*, without any air from beginning to end. After the operas of Rinuccini which had been set by Jacopo Peri, Giulio Caccini, and Monteverde, in that manner, at the beginning of the seventeenth century, had met with such universal applause in Italy, from the lovers of poetry and simplicity, and enemies to madrigals and Music of many parts, this kind of composition had many imitators, not only in Italy, but throughout Europe. All the melodies of Henry Lawes remind us of *recitative* or *psalmody*, and scarce any thing like an air can be found in his whole book of *Ayres*. As to his knowledge and resources in counterpoint, I am certain that they were neither great nor profound.

His works were chiefly published under the title of *Ayres and Dialogues*, of which he printed three several books, the first in 1653; the second, 1655; and the third, 1658. Besides these, many of his songs and dialogues were published by Playford in collections, entitled *Select musical Ayres and Dialogues*, by Dr. Wilson, Dr. Charles Colman, Nicholas Lanier, and others.

(*y*) I want not to set up one art against another, or to give a preference to singing over declamation; but to assign to each its due place and praise. There are passages in our best plays which could never be sung by the finest performer that ever existed, to so much effect as they have been spoken by

a Garrick or a Siddons; while in Metastasio's charming dramas, there are lines and stanzas, by which an audience, has been often more completely enrapt, when well set and well sung by a mellifluous and touching voice, than by the most exquisite declamation of the greatest actors that ever existed.

Though most of the productions of this celebrated musician are languid and insipid, and equally devoid of learning and genius, I shall point out what seem the most meritorious of his Ayres in these collections.

Book I.
p. 11.

Care - less of love and free from fears, &c.

is one of the most pleasing little airs that I have seen of this author.

I shall insert the following song entire, not so much on account of the beauty of the melody or harmony, though it is one of the best in those particulars, as for the singularity of the measure, which is such as seldom occurs. Harry Carey's ballad, *Of all the girls that are so smart, &c.* which is a slower kind of hornpipe, resembles it the most of any air I can recollect.

Song set by Henry Lawes.

A lo - ver once I did es - py with bleeding

heart and weeping eye, he wept and cried, how great's his

pain, that lives in love, and loves in vain.

" Little

"Little love serves my turn," p. 18 of the same collection, is the gayest air I have seen by H. Lawes. His other most pleasing ballads are those beginning, "If when the sun," p. 18, and Ben Johnson's song, "Still to be neat, still to be dress'd," see Playford's Collection. But the best of all his songs seems "Come from the dungeon to the throne," p. 167 of Playford's second part; and "Amidst the myrtles as I walk," is pleasing psalmody.

The tunes which he set to Sandys's excellent version of the psalms, as well as those to the *Choice Psalmes* of the same paraphrase which were composed by Hen. Lawes and his brother, in a kind of anthem or motet style, though ushered into the world, in 1648, by such innumerable panegyrics in rhyme, are so far from being superior to the syllabic psalmody of their predecessors who clothed Sternhold and Hopkins in Narcotic strains, that they seem to possess not only less pleasing melody, but less learned harmony, than may be found in anterior publications of the same kind. And this seems to be the opinion of the public: as they were never adopted by any vociferous fraternity, or admitted into the pale of a single country church, that I have been able to discover, since they were first printed. One of these, first published by Henry, to the seventy-second psalm, has, indeed, long had the honour of being jingled by the chimes of St. Lawrence Jewry, six times in the four and twenty hours, in a kind of *Laus perpetua*, such as was established in Psalmody-Island mentioned in vol. II. p. 9.

During the Civil War, Henry Lawes supported himself by teaching ladies to sing (z); however, he retained his place in the Chapel Royal, and, at the Restoration, composed the coronation anthem. Yet he did not long survive this event, for, in Oct. 1662, he died, and was buried in Westminster Abbey.

(z) It has, however, been roundly asserted, that "*singing* follows so naturally the smallest degree of proficiency on any instrument, that the learning of both is *unnecessary*; and, in fact, those that teach the harpsichord are now the only singing-masters we know of, except a few illiterate professors, who travel about the country, and teach psalmody by the notes, at such

rates as the lower sort of people are able to pay."

And a writer living in London had the courage to publish this opinion so lately as the year 1776! in spite of all the Palmas, Cocchis, Tedeschinis, Ventos, Sacchinis, Piozzis, Mortellaris, Parsonses, who wanted to persuade the world that they were singing-masters.

Dr. JOHN WILSON, a native of Feversham, in Kent, was a gentleman of Charles the First's chapel, and servant in ordinary to his majesty, in the character of chamber-musician. His instrument was the lute, upon which he is said to have excelled all the Englishmen of his time; and, according to Ant. Wood, his royal master was so pleased with his talents, and had even such a personal regard for him, that he not only listened to him with the greatest attention; but frequently condescended to lean or lay his hand on his shoulder, while he was playing.

For the excellence of his performance we must now wholly depend on tradition, as the compositions he has left behind him for the lute are but feeble testimonies of a great hand. Nor will his vocal productions, or Fantafias, either in print or manuscript, generate very exalted ideas of his genius or abilities as a composer. That he was admired by his majesty, and by the lovers of Music at Oxford, where he was honoured with the degree of doctor in Music, 1644, and where he long resided, proves more the low state of the art at this time, before the ears of the public were rendered discriminative, by a variety of great and rival talents, than his own perfections. Little had been heard, and but little was expected. Swift says, "we admire a little wit in a woman, as we do a few words spoke plain by a parrot:" and it might more seriously be said, that the best Music, during times of ignorance and inexperience, is perhaps more admired than the most exquisite productions and performance of a more enlightened period. Nothing can prove this more clearly than the unbounded and hyperbolical praises bestowed in France on the operas of Lulli, of which at present the whole nation is ashamed.

Dr. Wilson, indeed, seems to have set words to Music more clumsily than any composer of equal rank in the profession; but as he was respected by his contemporaries, and held an exalted rank in his art, a list shall here be inserted of his works; not so much for their intrinsic worth, as to enable curious enquirers to judge for themselves of the progress which Music had made in this kingdom, when

when such productions were in high favour, not only with the greatest personages but principal professors of the times (a).

“*Psalterium Carolinum*, the devotions of his sacred majesty in his solitude and sufferings, rendered in verse, set to Music for 3 voices and an organ or theorbo.” Folio, 1657.

“Cheerful Aires or Ballads first composed for one single voice, and since set for 3 voices.” Oxon. 1660.

“Aires to a voice alone, to a theorbo or bass viol;” these are printed in a collection entitled “Select Aires and Dialogues,” folio, 1653.

“Divine Services and Anthems,” the words of which are in Clifford’s Collection, Lond. 1663.

He also composed Music to several of the odes of Horace, and to some select passages in Ausonius, Claudian, Petronius Arbiter, and Statius; these were never published, but are preserved in a manuscript volume curiously bound in blue Turkey leather, with silver clasps, which the doctor presented to the university, with an injunction that no person should be permitted to peruse it till after his decease. It is still among the archives of the Bodleian Library.

The compositions of Dr. Wilson will certainly not bear a severe scrutiny either as to genius or knowledge. It is, however, not easy to account for the ignorance in counterpoint which is discoverable in many lutenists of these times; for having harmony under their fingers, as much as the performers on keyed-instruments, it facilitates their study, and should render them deeper contrapuntists than the generality of flute-players, whose flimsy compositions are proverbial.

On the surrender of the garrison of the city of Oxford, 1646, Dr. Wilson left the university, and was received into the family of Sir William Walter, of Sarsden, in Oxfordshire; but, in 1656, he was constituted Music-professor, and had lodging assigned him in Baliol College, where, being assisted by some of the Royalists, he lived ve-

(a) See the verses prefixed to the *Psalterium Carolinum*, and Ant. Wood’s character of them, *Atten. Oxon.* xi. *Faſti*, col. 42.

very comfortably, exciting in the university, according to A. Wood, such a love of Music, as in a great measure accounts for that flourishing state in which it has long subsisted there, and for those numerous private music-meetings, of which this writer, in his own life, has given such an amusing relation. At the Restoration, Dr. Wilson was appointed chamber-musician to Charles II. and, on the death of Henry Lawes, 1662, was again received into the Chapel Royal; when, quitting the University, he resided constantly in London till the time of his decease, at near seventy-nine years of age, in 1673.

JOHN HILTON, a bachelor in Music of the university of Cambridge, organist of St. Margaret's, Westminster, and also clerk of that parish, deserves a niche in the musical history of this period. He began to flourish in the latter end of Queen Elizabeth's reign; as his name appears among the composers who contributed to the *Triumphs of Oriana*. His genius for composition, however, did not much expand, at least publicly, during the next reign; though early in that of Charles I. he published *Fa Las* for three voices, and in 1652, an excellent collection of Catches, Rounds, and Canons, for three and four voices, under the quaint title of *Catch that Catch can*; among which there are many by himself, that were deservedly admired by his cotemporaries, and which still afford great pleasure to the lovers of this species of humorous and convivial effusions (*b*). He died during the Protectorship, and was buried in the cloister of Westminster Abbey. He is said to have had an anthem sung in that church, before his body was brought out for interment; but as not only the cathedral service was suppressed during this period, but the liturgy itself, and every species of choral Music, the fact seems unlikely, and ill-founded.

During the most tranquil part of Charles's reign, it seems as if musicians must have chiefly subsisted on the household and chapel

(*b*) The first thirty-two Rounds, &c. in this collection, are by Hilton himself, and the best that preceded those of Purcell; yet there are compositions in the subsequent part of the book, by Bird, Cranford, Ellis,

Brewer, Webb, Jenkins, Deering, Henry and William Lawes, Thomas Holmes, Edmond Nelham, John Cobb, Dr. Wilson, Simon Ives, and two or three canons, by Thomas Ford, that are excellent.

establishments, the munificence of their sovereign, and private patronage of the great; as, in summer, no such places as Vauxhall, Ranelagh, or other public gardens, furnished them with employment, or afforded them an opportunity of displaying their talents; and in winter, there were no public concerts, either in the capital, or in provincial towns; and, except the theatres, which employed but small bands, there seem to have been no public means of subsistence for singers out of the church, or, except organists, for instrumental performers any where. Luxury was now less diffused through the kingdom than in subsequent times; for, in proportion as commerce has been extended, individuals have become rich, while the state has been impoverished. Nothing renders men less parsimonious and circumspect in their expences, than a sudden and unexpected influx of ready money. Our ancestors, whose income was circumscribed, had little to spare for new modes and expensive pleasures. The great were munificent, but the rest were necessarily economical.

Though the musical publications, during this contentious and turbulent reign, were but few; and though most of them have already been incidentally mentioned, they shall here be chronologically arranged, for the reader's more easy inspection.

1627. *Fa Las for three Voices*, by John Hilton. Morley, in imitation of Gastoldi, first published songs in English, under this trivial title. He was followed by Weelks, and Weelks by Hilton, who seems to have been the last that adopted it. The syllables *fa la* are used, in these light and gay compositions, as a kind of *refrein* or burden, at the end of each couplet, or stanza.

1629. *French Court-Ayres with their Ditties Englished*, of 4 and 5 parts, collected, translated, and published by Edward Filmer, gent. dedicated to the Queen, folio. These Ayres were chiefly composed by Pierre Guedron, with two by Anthoine Boisset. There is very little musical merit discoverable in these songs; which are, however, highly extolled in several copies of verses prefixed to the book, and, among the rest, in one by Ben Jonson. The editor seems to have taken great pains in translating the words, *totidem syllabis*, in order to accommodate them to the original melodies.

1611. *A briefe Instruction and Art of Canon*, by Elway Bevin.
See above, p. 328.

1624. *The Compleat Gentleman*, by Henry Peacham, quarto.
This book, though written in the reign of King James, seems not to have been published till this year. Among the numerous essays it contains, there is one on *Musick*, which though not profound, yet will supply a lover of musical history with the knowledge and opinions of an enquiring and enlightened Dilettante, during the early part of the last century.

1636. *The Principles of Musick in singing and setting, with the twofold Use thereof, ecclesiastical and civil*, by Charles Butler, Magd. Coll. Oxf. master of arts, 4to. This tract, which is dedicated to Charles I. seems to have been the only theoretical or didactic work, published on the subject of Music, during his reign. The author appears to have been a learned and ingenious man. He had previously published *the Principles of Grammar*, in which he had proposed a new and more simple orthography for our language, of which Dr. Johnson has given an account in the grammar prefixed to his Dictionary. The Saxon and new characters he uses, in order to explode such letters as are redundant, or of uncertain powers, render this musical tract somewhat difficult to peruse. It is, however, better digested, more compressed, and replete with useful information, than any work of the kind that appeared for more than a century after Morley's *Introduction*. The quotations are perhaps too numerous, and the display of musical erudition may be thought to border on pedantry; yet, allowing these to be censurable, the book contains more knowledge, in a small compass, than any other of the kind, in our language.

1637. *Comus* was published by Henry Lawes, but without the Music.

1638. Sandys's Paraphrase of the Psalms was published, with tunes by Henry Lawes.

1639. *Aires and Madrigals for two, three, four, and five voices, with a thorough-bass, for the organ, or theorbolute*, in the Italian

way, by Walter Porter. These seem to have been the last madrigals that were published in England; where, as well as on the Continent, their favour being faded, this composer was not possessed of sufficient genius or renown to revive it. This musician, who was a gentleman of the Chapel Royal to Charles I. published likewise *Hymns and Motets*, for two voices, 1657; and the *Psalms* of Sandys's version, set likewise for two voices, with a thorough base for the organ.

1641. *Barnard's selected Church-Music*, of which an account has been already given. And, soon after, but without a date, *Musica Deo sacra et Ecclesiæ Anglicanæ*, by Thomas Tomkins, a publication which has likewise been already recorded.

1648. The last musical publication during the unfortunate life of Charles I. was "*Choice Psalmes put into Musick for three Voices*," by Henry and William Lawes, Brothers and Servants to his Majesty. With divers Elegies, set to Musick by sev'ral Friends upon the Death of William Lawes. And at the End of the Thorough Base are added nine Canons of three and foure Voices, made by William Lawes."

It is but justice to say, that these psalms are very inaccurately printed; yet, in scoring them, it is not difficult to distinguish the author's faults from those of the printer. There is, indeed, no felicity discoverable throughout the work; no attempt at air, expression, or new modulation; all the movements being in one even tenor of mediocrity.

Of these productions, dedicated to the King but a very short time before his execution, and recommended by four copies of verses, one of which is a sonnet by Milton, an opinion has already been given. However, to remove all suspicion of prejudice against two men, of whose abilities I wished and expected to have had just cause to speak with more reverence, the two following psalms from this work are selected, in defence of my candour and fidelity.

PSALM

Sing to the King of Kings sing in unusual layes that hath wrought wondrous things
Sing to the King of Kings sing in unusual layes that hath &c
Sing to the King of Kings sing in unusual layes that hath &c

his conquests crown with praise whose name alone & sacred hands their impious hands have

pro - tect be thou my Rock with thy strong arme immure.

It does not appear that either of the brothers had studied counterpoint regularly, or acquired that facility and unembarrassed arrangement of the parts; that purity of harmony, and graceful selection of sounds, in melody, which are manifest in the works of the best masters of Italy of the last and present century, and which are perhaps only to be attained early in life, by the diligent study of plain counterpoint upon *canto fermo*, or melodies equally simple.

Indeed, there seems no other way of accounting for the great favour and celebrity of these musicians, than by imagining them to have been possessed of qualities which endeared them to mankind, exclusive of their skill in Music; for, besides the many panegyrics bestowed on them by the first poets of their time, there are in this book of psalms no less than eight elegies on the death of William, set to Music by the first musicians of the age: Dr. Wilson, John Taylor, John Cobb, Capt. Edm. Forster, Simon Ives, John Hilton, John Jenkins, and his brother Henry.

There was but little instrumental Music of any kind printed during this period; and, for keyed-instruments, nothing appeared from the time that *Parthenia* was engraved, till 1657, when a book of lessons for the virginal was published in the names of Dr. Bull, Orlando Gibbons, Rogers, and others. At a time when all other instrumental Music was so easy and simple, as to appear now perfectly artless and insipid, the extreme complication and difficulty of all the Music that was composed for the organ and virginal, is truly marvellous; and, indeed, though frequent complaints are made concerning the difficulty of the harpsichord and piano-forte-music of our times, it may be asserted, with the utmost truth, that it has been simplified and rendered more practicable in every part of Europe, during the present century, while compositions for almost every other instrument are daily rendered more difficult.

INTER-

INTERREGNUM.

From the death of Charles I. till the Restoration, though the gloomy fanaticism of the times had totally prohibited the public use of every species of Music, except unisonous and syllabic psalmody, yet it seems to have been more zealously cultivated, in private, during the usurpation, if we may judge by the number of publications, than in the same number of years, at any former period.

Several musicians began their career during this time, who afterwards arrived at great eminence. Among these was JOHN JENKINS, a voluminous composer of *Fancies* for viols, which were in great esteem during this rude state of instrumental Music. His first publication, however, was vocal, being a collection of songs under the title of "Theophila, or Love's Sacrifice," folio, 1651. None of the infinite number of pieces that he composed for viols, which occur in all the manuscript collections of the times, were printed; yet, in 1660, he published twelve Sonatas for two violins and a base, with a thorough-base for the organ or theorbo, which were reprinted in Holland, 1664. These were professedly in imitation of the Italian style, and the first of the kind which had ever been produced by an Englishman. It was at this time an instance of great condescension for a musician of *character* to write expressly for so ribald and vulgar an instrument, as the *violin* was accounted by the lovers of lutes, guitars, and all the *fretful* tribe.

The Hon. Roger North, whose manuscript *Memoirs of Musick* have already been mentioned, is very diffuse on the subject of Jenkins, the circumstances of whose life have suggested to him many moral reflexions on the instability of musical renown. "It is of small importance," says he, "to the state of the world, or condition of human life, to know the names and styles of those composers of our own country, who have excelled the Italians themselves in every species of Music, but that for the voice; therefore the oblivion of all such things is no great loss. But for curiosity sake, as other no less idle antiquities are courted, it would doubtless

“ less afford satisfaction to professors and lovers of the art, if they
 “ could acquire true information concerning their names, charac-
 “ ters, and works : of the latter, much knowledge might be ob-
 “ tained, if the old collections, not yet rotten, of many patrons of
 “ Music were accessible. In these we might still find the produc-
 “ tions of Alfonso Ferabosco, Coperario, Lupo, Mico, Este, and
 “ divers others, especially of John Jenkins, whose musical works
 “ are more voluminous, and, in their time, were more esteemed
 “ than all the rest, though they now (1728) lie in the utmost con-
 “ tempt.

“ I shall endeavour to give a short account of this master, with
 “ whom it was my good chance to have had an intimate acquaint-
 “ ance and friendship (*c*). He lived in King James's time, and
 “ flourished in that of King Charles I. His talents lay chiefly in
 “ the use of the lute and base, or rather lyra-viol. He was one of
 “ the court musicians, and was once brought to play upon the ly-
 “ ra-viol before King Charles I. as an extraordinary performer.
 “ And when he had done, the King said he did wonders upon an
 “ inconsiderable instrument (*d*). He left London during the Re-
 “ bellion and passed his time at musical gentlemen's houses in the
 “ country, where he was always courted, and at home, wherever he
 “ went; and in most of his friends houses there was a chamber
 “ called by his name. For, besides his musical excellencies, he was
 “ an accomplished and ingenious person, and of such inoffensive
 “ and amiable manners, that he was esteemed and respected for his
 “ virtues and disposition, long after age had deprived him of his
 “ musical powers.

“ It is not possible to give an account of his compositions, they

(*c*) Mr. North, the author of these Me-
 moirs, was born in 1650, and lived till 1733,
 when he had arrived at his eighty-third
 year. He had an organ, built by father
 Smith, for a gallery of sixty feet long,
 which he erected on purpose for its recep-
 tion, at Rougham, his family seat in Nor-
 folk. This instrument, though entirely
 composed of wooden pipes, was spritely, and

infinitely more sweet in its tone, than any
 one of metal that I ever heard. Jenkins
 was born at Maidstone, in Kent, 1592, and
 lived to the great age of eighty-six, eighteen
 years after the Restoration.

(*d*) The lyra viol was a *viol da gamba*,
 with more strings, but differently tuned from
 the common six-string base. Its notation, like
 that of the lute, was written in *entablature*.

“ were so numerous that he himself outlived the knowledge of them.
 “ A Spanish nobleman sent some papers to Sir Peter Lely, contain-
 “ ing fragments of a Consort (Concerto), in 4 parts, of a sprightly
 “ kind, such as were then called *Fancies*, desiring that he would
 “ procure for him the rest, *coûte qui coûte*. Lely gave me these
 “ papers, as the likeliest person to get them perfected. I shewed
 “ them to Jenkins, who said he knew the Consort to be his own;
 “ but when or where composed he knew not, and was unable to
 “ recollect any more about it.

“ His *Fancies* were full of airy points, grave and triple move-
 “ ments, and other variety. And all that he produced till his de-
 “ clining age, was lively, active, decided, and fanciful. And of
 “ this kind he composed so much, that the private (or chamber)
 “ Music, in England, was in a great measure supplied by him; and
 “ they were the more coveted, because his style was new, and, for
 “ the time, difficult: for he could hardly forbear divisions, and
 “ some of his *Consorts* were too full of them. But it must be
 “ owned, that being an accomplished master on the viol, all his
 “ movements laid fair for the hand, and were not so hard as they
 “ seemed.

“ His vein was less happy in vocal Music, though he was fond
 “ of setting words, and, occasionally, of teaching to sing; but he
 “ had neither voice nor manner fit for it. In his spritely moments
 “ he made *Catches* (e), and strains that we called *rants*, with a piece
 “ called *the Cries of Newgate*, which was all humour and very
 “ whimsical. But of all his conceits, none flew about with his
 “ name so universally as the small piece called *his Bells*. In those
 “ days the country fiddlers were not so well supplied with light Mu-
 “ sic from London, as since; and a master that furnished them with
 “ new tunes, that they were able to play, was a benefactor.”

(e) Nothing of this kind now remains of
 Jenkins, but his little round: “ A boat, a
 “ boat, haste to the ferry,” which is a hap-

py selection and combination of pleasing
 sounds.

THE FIVE BELL CONSORTE,

by John Jenkins. 411

Slow

The musical score is written on five systems of three staves each. The first system includes a tempo marking 'Slow'. The notation is in a 3/4 time signature with a key signature of one sharp (F#). The score features a variety of musical symbols including eighth and sixteenth notes, rests, and repeat signs. The paper is aged and shows some staining.

Handwritten musical score for a Canon in G major, featuring six systems of three staves each. The notation is in G major (one sharp) and common time (C). The piece is marked "Canon" in the second system. The score includes various musical notations such as treble and bass clefs, key signatures, time signatures, and musical notes (quarter, eighth, and sixteenth notes, rests, and accidentals). The manuscript shows signs of age, including yellowing and some staining.

Canon

What gave rise to this trio, or *Consort*, as it was called, seems to have been a book called *Tintinnalogia*, or *the Art of Ringing*, published 1668; a work not beneath the notice of musicians who wish to explore all the regions of natural melody: as in this little book they will see every possible change in the arrangement of Diatonic sounds, from 2 to 12; which being reduced to musical notes, would point out innumerable passages, that, in spite of all which has hitherto been written, would be new in melody and musical composition. The reader will be able to form some judgment of the wonderful variety which the changes in bells afford to melody, by the annexed calculations; whence it appears, that even in the plain and simple arrangement of natural sounds according to the species of octave, without the intervention of either flat or sharp, eight notes will furnish 40320 different passages, and twelve notes, 479 millions 1600! so that supposing, according to the usual calculation, that only 720 changes could be rung in an hour, it would require seventy-five years, ten months, and ten days, to ring the whole number of changes upon twelve bells!! Merfennus, in his *Harm. Universelle*, published 1636, has enumerated these changes, and reduced to musical notation those of the hexachord, as an illustration of the amazing variety which may be given to the arrangement of only six sounds in melody. It must not, however, be imagined that *all* the changes, in the above table, would be equally agreeable, or even practicable, if introduced in an air; yet, in the almost infinite number offered to a musician's choice, many would doubtless frequently occur, which would not only be pleasing, but new. Out of the great number of peals, which are given in numbers, on five, six, and eight bells, in the *Tintinnalogia*, it is extraordinary, that melody has not been consulted in the choice of changes: there seems a mechanical order and succession in them all, without the least idea of selecting such as are most melodious and agreeable. Even the *clams*, or the collision of two bells together, in counterpoint, has been settled by ringers without the least knowledge of harmony.

“Jenkins,” continues Mr. North, “was certainly a great master of
 “divisions, and encouraged Sympson, the *division-violist*, by a copy of
 “verses at the beginning, and by some examples at the end of his book.
 “Unluckily all his earliest and most lively works are lost and forgotten,
 “and none remain but those of his latter time, composed while he lived
 “in country families, to the capacity of his performers. As a man,
 “he was certainly allowed a considerable share of terrestrial happi-
 “ness; for he had uninterrupted health, was superior in his con-
 “duct to his profession, enjoyed the esteem of all who knew him,
 “was easy in his temper, and never distressed in his circumstances;
 “and having, with philosophic calmness, seen himself out-run by
 “the world, he died in peace, after living like a good Christian, at
 “the house of Sir Phil. Wodehouse, at Kimberley, in Norfolk, where,
 “and at Hunston, the seat of the family of Sir Roger L’Estrange,
 “in the same county, he spent many of the last years of his life (*f*).”

In spite of Puritanism, fanatic gloom, and psalm-roaring saints, when Hilton ventured, in 1652, forty-three years after *Pammelia*, to publish “*Catch that Catch can*, or a choice Collection of Catches, “Rounds, and Canons, for 3 and 4 Voices,” they helped to so-
 lace the Royalists in private, during the triumphs of their enemies, and suppression of all public amusements. Though many of these Rounds and Catches were afterwards reprinted by Playford, and retailed in later collections; the book, which is of a small ob-
 long form, is not only scarce, but valuable; as it contains several canons and ingenious compositions which are not yet common.

(*f*) The parish register of Kimberley says, that John Jenkins, Esq. was buried Oct. 29th, 1678. In Blomfield’s *History of Norfolk*, Vol. I. p. 759, an epitaph is insert-

ed, which is said to have been copied from his grave-stone in the middle of that church, but it is now gone. Ant. Wood says “he “was a little man with a great soul.”

Hold thy Peace, and I prithee hold thy Peace.
Thou Knave. Hold thy Peace, Thou Knave.
Thou Knave.

In 1653, a translation was published, with a learned commentary and notes by lord Browncker, the first president of the Royal Society after its institution, of Des Cartes's short essay, entitled *Musicæ Compendium*. This little work added nothing but method and geometrical precision to the præcognita of Music, except a few very unphilosophical notions concerning the sympathetic effects of sound. It was, however, the first importation relative to the art, since Douland's translation of Ornithopharchus; and such was the reputation of the author, till Newton confuted his philosophy, that this little tract was purchased with avidity by the lovers of the science, as a valuable acquisition.

Though Henry Lawes was much celebrated as a composer, his works were wholly circulated through the kingdom in manuscript, till this year, 1653, when he published the first book of his *Ayres and Dialogues*, in folio. And the same year, whether before or after the book of Lawes had appeared, I know not, JOHN PLAYFORD first became a publisher of Music, by printing, in the same size as Lawes, "Select musical Ayres and Dialogues, in 3 Divisions: "first, Ayres for a Voyce alone, to the Theorbo, or Base-viol; second, Choice Dialogues for 2 Voyces, for 2 ditto; third, Short "Ayres and Songs of 3 Voyces, which may be sung by one or two "Voices to an Instrument." The composers of these songs are Dr. John Wilson, Dr. Charles Colman, Messrs. William and Henry Lawes, Lanier, Webb, Smegergil, Edward Colman, and Jeremy Savile, the principal English musicians then living: and yet the whole collection does not contain one ayre which now seems worth engraving, either as a specimen of individual genius, or national taste.

In 1655, Playford published the first edition of his "Introduction to the Skill of Music," a compendium compiled from Morley, Butler, and other more bulky and abstruse books, which had so rapid a sale, that, in 1683, ten editions of it had been circulated through the kingdom. The book, indeed, contained no late discoveries, or new doctrines, either in the theory or practice of the art; yet the form, price, and style, were so suited to every kind of musical readers, that it seems to have been more generally purchased

and read, than any elementary musical tract that ever appeared in this or any other country.

JOHN PLAYFORD was born in the year 1613, and seems, by what means is now not known, to have laid in a considerable stock of musical knowledge, previous to becoming the vender of the chief productions of the principal composers of the time. As he was the first, so he seems the most intelligent printer of Music during the last century; and he and his son appear to have acquired the esteem of the first masters of the art; and, without a special licence, or authorised monopoly, to have had almost the whole business of furnishing the nation with musical instruments, music-books, and music-paper, to themselves; as, during more than the first fifty years of the present century, Walsh and his son had afterwards.

In 1655, this diligent editor published, in two separate books, small 8vo, "Court Ayres, by Dr. Charles Colman, William Lawes, John Jenkins, Simpson, Child, Cook, Rogers, &c."

These being published at a time when there was properly no court, were probably tunes which had been used in the masques performed at Whitehall during the life of the late King.

This year, another volume of "Ayres and Dialogues" was published by Henry Lawes. All the public theatres being now shut, Music seems to have been more cultivated, as a domestic amusement, than ever. In the violent invectives published at this time by the Puritans, Music, its patrons, and professors, were not spared. Goffon was the first writer who endeavoured to prove that theatrical exhibitions were immoral, and wholly inconsistent with the purity of the Christian Religion; and in this severe censure players and pipers, by whom he means musicians, were alike involved: as appears by his little book, published in 1579, entitled, "The School of Abuse, containing a pleasant invective against poets, pipers, plaiers, jesters, and such like caterpillers, of a common welth; setting up the flagge of defiance to their mischievous exercise, and ouerthrowing their bulwarkes by prophane writers, natural reason, and common experience."

These opinions were adopted and rendered still more acceptable to

to the fanaticism of the times, by additional invectives and scurrility from the unbridled pen of William Prynne, who, in the book for which he lost his ears, asserts that "stage-plays (the very pompes of the divell, which we rennouce in baptisme, if we believe the fathers) are finfull, heathenish, lewde, ungodly spectacles, and most pernicious corruptions; condemned in all ages as intolerable mischiefes to churches, to republickes, to the manners, mindes, and foules of men. And that the profession of play-poets, of stage-players, together with the penning, acting, and frequenting of stageplayers are unlawfull, infamous, and misbecoming Christians." And though stage-plays are the principal objects of his satire, he is not less severe in his censure of Music, vocal and instrumental; asserting that one unlawful concomitant of plays is "amorous, obscene, lascivious, lust-provoking songs, and poems," which he says were so odious in the time of Queen Elizabeth, that churchwardens were enjoined, in the first year of her reign, to enquire "whether any minstrells or any other persons did use to sing or say any songs or ditties that be evile and uncleane." And cites Clemens Alexandrinus to prove that "cymbals and dulcimers were instruments of fraud; that pipes and flutes are to be abandoned from a sober feast; and that chromaticall harmonies are to be left to impudent malapertnesse in wine, to whorish Musicke crowned with flowers."—But this is a sufficient specimen of the elegance of his style, and candour of his reasoning. Prynne, however, spoke but the language and sentiments of the sectaries of his time; and Stubbs, another writer of the same class, calls those who play to the lord of misrule and his company in country towns, bawdy pipers and thundering drummers and assistants in the devil's daunce (g).

Prynne's *Histrion-mastix*, in spite, and, perhaps, on account of the rigour of his punishment, had a manifest effect in augmenting the horror in which theatrical representations were held by the Puritans, and even in diminishing the passion of the Royalists for these spectacles. Yet, though the public theatres were shut up, many plays seem to have been written and printed during the Usurpation, if we

(g) *Anatomic of Abuses*, p. 107.

may depend on the dates given to them by Langbaine and Giles Jacob. However, in May 1656, Sir William Davenant obtained a permission to open a kind of theatre at Rutland-house, in Charterhouse-square, for the exhibition of what he called "an Entertainment in Declamation and Music, after the Manner of the Ancients." And Anthony Wood, imagining it to have been the first Italian opera performed in England, says that "though Oliver Cromwell had now prohibited all other theatrical representations, he allowed of this, because, being in an unknown language, it could not corrupt the morals of the people."

A farther account of this exhibition will be given hereafter, in tracing the origin and progress of musical dramas or operas, in England; when the validity of Anthony Wood's assertion will be examined.

In 1658, Sir William Davenant had a piece represented daily at the Cockpit, in Drury-lane, called *Sir Francis Drake, or the Cruelty of the Spaniards in Peru*, expressed by vocal and instrumental Music, of which farther notice will likewise be taken elsewhere. We hear of no other dramatic performance till 1659, when Rhodes, the bookseller, obtained a licence for acting plays at the Cockpit, in Drury-lane, where the *opera* of Sir William Davenant, as Ant. Wood calls it, "was translated; which delighting the eye and ear extremely well, was much frequented for many years. (b)"

In 1657, were published the Lessons for the Virginalls, by Bull, Gibbons, Rogers, and others already mentioned. Of Rogers, afterwards admitted to the degree of doctor in Music, at Oxford, farther notice will be taken hereafter; and of Matthew Lock, who this year appears as an author by the publication of his *Little Consort of three Parts for Viols or Violins*, consisting of Pavans, Ayres, Corants, and Sarabands, in two several Varieties, the first twenty of which are for two Trebles and a Bass, it will be necessary to speak frequently, after the Restoration: as he was the first that furnished our stage with Music in which a spark of genius is discoverable; and who

(b) *Athen. Oxon.* Vol. II. Col. 412.

was,

was, indeed, the best secular composer our country could boast, till the time of Purcell.

In 1658, a third book of *Ayres and Dialogues* was published by Henry Lawes, with his head finely engraved, by Faithorne. This year likewise produced "Ayres and Dialogues to be sung to the Theorbo, Lute, or Base Viol, by JOHN GAMBLE," folio; who, according to Ant. Wood, was regularly bred to Music, under Ambrose Beyland, "a noted master of the art," with whom he served an apprenticeship. When he quitted his master, he performed at the playhouse, and afterwards was admitted into the king's chapel, as a player on the cornet. In Charles the Second's time he was appointed one of the violins in his majesty's band, and composer to the theatre royal. A print of this musician, by T. Cross, is placed at the head of his book.

In 1659, we have more *Select Ayres and Dialogues!* by Drs. Wilson and Colman, William and Henry Lawes, Lanieri, Webb, Jenkins, and others. It seems as if the fashion for musical dialogues, which raged in England during the chief part of the last century, had arisen from the narrative songs and cantatas of Italy, to which the invention of recitative gave birth.

During this last year of the Usurpation, was published, "The Division Violist, or an Introduction to the playing upon a Ground, by CHRIST. SIMPSON" a musician extremely celebrated for his skill in the practice of his art, and abilities on his particular instrument. The base-viol, or viol da gamba, was in such general favour during the last century, that almost all the first musicians of this country, whose names are come down to us, were performers upon it, and composed pieces purposely to shew its powers; but particularly Coperario, William Lawes, Jenkins, Dr. Colman, Lupo, Mico, and Loofemore. But this instrument, like the lute, without which no concert could subsist, was soon after so totally banished, that its form and construction were scarcely known, till the arrival of Abel in England, whose taste, knowledge, and expression upon it were so exquisite, that, instead of renovating its use, they seem to have kept lovers of Music at an awful distance from the instrument, and in utter despair of ever approaching such excellence. The instrument

strument itself, however, was so nasal, that this great musician, with all his science and power of hand, could not prevent his most enthusiastic admirers from lamenting that he had not, early in life, applied himself to the violoncello.

But if its general use had continued, or were restored, this book of Simpson, from the universal change of taste and style of every species of Music, would be of but little use to a student on that instrument now; when rapid divisions, of no other merit than the difficulty of executing them, have been totally supplanted by vocal expression, learned modulation, and that rich harmony to which the number of its strings is favourable. Rough, but warm encomiastic verses, are prefixed to Simpson's works by Dr. Colman, John Jenkins, Mathew Lock, and others, which only shew with what perishable materials musical fame is built!

A translation of this book into Latin, for the use of foreigners, with the original text on the opposite page, was published by the author in 1665, under the title of *Chelys Minuritionum; Editio secunda*, thin folio.

Besides these, Simpson published, in 1667, "A Compendium of practical Music in 5 parts, containing 1. The rudiments of song. 2. The Principles of Composition. 3. The Use of Discord. 4. The Form of Figurate Descant. 5. The Contrivance of Canon."

Whoever expects to learn the whole principles of an art by a single book, or, indeed, any number of books, without oral instruction, or great study, practice, and experience, must be disappointed. This compendium, like most others of the kind, more frequently generates new doubts and perplexities, than removes the old. However, something is to be learned from most books; and what a student is unable to find in one, if out of the reach of a master, must be sought in another.

Simpson, in his younger days, served in the royal army, raised for Charles I. by Cavendish, duke of Newcastle; he was a Roman Catholic and patronised by Sir Robert Bolles, of Leicester-place, with whom he resided during the Interregum. He seems to have been in close friendship with Jenkins and Lock, as, on all occasions, they reciprocally praise each other.

State

State of Music at Oxford, during the Protectorate.

Oxford, in the time of the Civil War, seems to have been the only place in the kingdom where musical sounds were allowed to be heard; for that city, during a considerable time, being the royal residence, not only the household musicians, but many performers, who had been driven from the cathedrals of the capital, as well as those of other parts of the kingdom, flocked thither as to a place of safety and subsistence; however, in 1646, after the King was obliged to quit this post, and had been totally defeated at Naseby, they were obliged to disperse, and those that were unable to find an asylum in the house of some secret friend to the royal cause and to their art, were obliged to betake themselves to new employments.

Ten years of gloomy silence seem to have elapsed before a string was suffered to vibrate, or a pipe to breathe aloud, in the kingdom; as we hear of no music-meetings, clubs, or concerts, till the year 1656; when, by the peculiar industry of honest Anthony Wood, whose passion for the art inclined him to regard every thing that belonged to it worthy of a memorial, we have an exact account of the state of practical Music in this university.

The obligations of English historians and biographers to this diligent antiquary are such, that he seems to merit an honourable niche in every literary fabrication to which he has contributed materials; and here it seems as if he should not be passed without some testimony of respect and gratitude, as a salute and ceremonial due to his rank in the corps to which he belonged.

ANTHONY WOOD, or *à Wood*, whose whole life was spent in the service of the dead, and whose labours, since his decease, have so much facilitated the enquiries, and gratified the curiosity of the living, was born at Oxford, 1632. In his life, written by himself, with monastic simplicity, he tells us, that in 1651 "he began to
" exercise his natural and insatiable genie to Musick. He exercised
" his hand on the violin, and having a good eare to take any tune
" at first hearing, he could quickly draw it out from the violin, but

“not with the same tuning of strings that others used. He wanted
“understanding, friends, and money, to pick him out a good master,
“otherwise he might have equalled in that instrument, and in sing-
“ing, any person then in the university. He had some companions
“that were musical, but they wanted instruction as well as he.”

The next year, being obliged to go into the country to try to
get rid of an obstinate ague, by exercise and change of air, he tells,
that “while he continued there he followed the plow on well-
“dayes, and sometimes plowed. He learned there to ring on the
“fix bells, then newly put up: and having had from his most
“tender yeares an extraordinary ravishing delight in Musick, he
“practised there without the help of an instructor, to play on the
“violin. It was then that he tuned his strings in 4ths, and not in
“5ths, according to the manner; and having a good eare, and be-
“ing ready to sing any tune upon hearing it once or twice, he
“could play it also in a short time with the said way of tuning,
“which was never knowne before.”

“After he had spent the summer in a lonish and retired condition,
“he returned to Oxon. And being advised by some persons, he
“entertained a master of Musick to teach him the usual way of play-
“ing on the violin, that is by having every string tuned 5 notes
“lower than the other going before. The master was Charles
“Griffith, one of the musitians belonging to the city of Oxon!
“whom he then thought to be a most excellent artist. But when
“A. W. improved himself in that instrument, he found he was not
“so. He gave him 2s. 6d. entrance, and so quarterly. This per-
“son after he had extreamly wondered how he could play so many
“tunes as he did by 4ths, without a director or guide, tuned his
“violin by 5ths, and gave him instructions how to proceed, leav-
“ing then a lesson with him to practice against his next coming.”

In 1653, he found that “heraldry, Musick, and painting did so
“much crowd upon him, that he could not avoid them; and
“could never give a reason why he should delight in those studies,
“more than in others, so prevalent was nature, mixed with a gene-
“rosity

“rosity of mind, and a hatred of all that was servile, sneaking, or
“advantageous for lucre sake.

“Having by 1654 obtained a proficiency in Musick, he and his
“companions were not without silly frolicks, not now to be main-
“tained.”—What should these frolicks be, but to disguise them-
selves in poor habits, and like country fiddlers scrape for their livings?
After strolling about to Farringdon Fair, and other places, and gain-
ing money, victuals, and drink for their trouble, in returning home
they were overtaken by certain soldiers, who forced them to play in
the open field, and then left them without giving them a penny.
“Most of his companions would afterwards glory in this, but he
“was ashamed, and could never endure to hear of it.”

By 1656, his record informs us, that “he had a genuine skill in
“Musick, and frequented the weekly meetings of musitians in
“the house of Will. Ellis, organist of St. John’s Coll. situated on
“that place whereon the theatre was built.” Here he gives a list
of the usual company, that met and performed their parts on lutes
and viols; among these eight were gentlemen. “The Musick-
“masters were Will. Ellis, bachelor of Musick and owner of the
“house, who always played his part either on the organ or virginal.
“Dr. John Wilson, the public professor, the best at the lute in all Eng-
“land; he sometimes played on the lute, but mostly presided (di-
“rected) the consort. — Curteys, a lutenist, lately ejected from
“some choire or cathedral church. Thomas Jackson a base-vio-
“list. Ed. Low, then organist of Christ-church; he played only
“on the organ, so when he played on that instrument, Mr. Ellis
“would take up the counter-tenor viol, if any person were wanting
“to performe that part. Gervase Littleton, *alias* Westcot, or
“Westcot, *alias* Littleton, a violist. He was afterwards a singing-
“man of St. John’s Coll. Will. Glexney, who had belonged to a
“choire before the war: he played well upon the base-viol, and
“sometimes sung his part. — Proctor, a young man and a new
“comer. John Packer one of the universitie musitians; but Mr.
“Low, a proud man, could not endure any common musitian to
“come to the meeting, much less to play among them. Of this

“ kind I must rank Joh. Haselwood, an apothecary, a starch’d for-
 “ mal clisterpipe, who usually played on the base-viol, and some-
 “ times on the counter-tenor. He was very conceited of his skill
 “ (tho’ he had but little of it) and therefore would be ever and anon
 “ ready to take up a viol before his betters : which being observed
 “ by all, they usually called him *Handlerwood* (i). The rest were
 “ but beginners. Proctor died soon after this time. He had been
 “ bred up by Mr. John Jenkins, the mirrour and wonder of his
 “ age for Musick, was excellent for the lyra-viol and division-viol,
 “ good at the treble-viol and violin, and all comprehended in a man
 “ of 3 or 4 and twenty yeares of age. He was much admired at
 “ the meetings, and exceedingly pitied by all the faculty for his
 “ loss.”

At this time A. W. tells us, that “ what by Musick and rare
 “ books that he found in the public library, his life was a perfect
 “ *Elysium*.”

“ A. W. was now advised to entertain one William James, a
 “ dancing-master, to instruct him on the violin, who by some was
 “ accounted excellent on that instrument, and the rather, because it
 “ was said, that he had obtained his knowledg in dancing and Mu-
 “ sick in France. He spent in all half a yeare with him, and gained
 “ some improvement ; yet at length he found him not a compleat
 “ master of his facultie, as Griffith and Parker were not : and to say
 “ the truth, there was no compleat master in Oxon. for that instru-
 “ ment, because it had not been hitherto used in consort among
 “ gentlemen, only by common musitians, who played but two parts.
 “ The gentlemen in private meetings, which A. W. frequented,
 “ played three, four, and five parts with viols, as treble-viol, tenor,
 “ counter-tenor, and bass, with an organ, virginal, or harpsicon
 “ joyned with them ; and they esteemed a violin to be an instru-
 “ ment only belonging to a common fidler, and could not endure
 “ that it should come among them, for feare of making their meet-
 “ ings to be vaine and fidling. But before the restoration of King
 “ Charles II. and especially after, viols began to be out of fashion,

(i) The reader will “excuse his being jocular.”

“ and only violins used, as treble violin, tenor, and base violin; and
 “ the King, according to the French mode, would have 24
 “ violins playing before him, while he was at meales, as being more
 “ airie and brisk than viols.

“ In the latter end of the yeare 1657, Davis Mell, the most emi-
 “ nent violinist of London, and clock-maker, being in Oxon. Pe-
 “ ter Pitt, Will. Bull, Ken. Digby, and others of Allsoules, as also
 “ Ant. W. did give a very handsome entertainment in the taverne
 “ cal'd the *Salutation*. The company did look on Mr. Mell to have
 “ a prodigious hand on the violin, and they thought that no person,
 “ as all in London did, could goe beyond him.”

By connecting the scattered fragments of this zealous Diletante's
 life, which concern Musick, we shall be able to form an idea of the state
 of the art, not only at Oxford, but in every other part of the king-
 dom where it was more secretly practised, during the latter part of
 the Usurpation.

Under the year 1658, A. W. tells us, that “ he entertained two
 “ eminent musitians of London, named John Gamble and Thomas
 “ Pratt, after they had entertained him with most excellent Musick
 “ at the meeting-house of Will. Ellis. Gamble had obtained a
 “ great name among the people of Oxon. for his book of *Ayres and*
 “ *Dialoges to be sung to the Theorbo or Base-viol*. The other for
 “ severall compositions, which they played in their consorts.

“ Tho. Baltzar, a Lubecker borne, and the most famous artist
 “ for the violin that the world had yet produced, was now in Oxon.
 “ and this day, July 24, A. W. was with him and Mr. Ed. Low,
 “ lately organist of Ch. Ch. at the house of Will. Ellis. A. W. did
 “ then and there, to his very great astonishment, heare him play
 “ on the violin. He then saw him run up his fingers to the end
 “ of the finger-board of the violin, and run them back insensibly,
 “ and all with alacrity and in very good tune, which he nor any in
 “ England saw the like before. A. W. entertained him and Mr.
 “ Low with what the house could then afford, and afterwards he
 “ invited them to the taverne; but they being engaged to goe to
 “ other company, he could no more heare him play or see him play

“ at

“ at that time. Afterwards he came to one of the weekly meetings
 “ at Mr. Ellis’s house, and he played to the wonder of all the au-
 “ ditory ; and exercising his finger and instrument several wayes to
 “ the utmost of his power ; Wilfon thereupon, the public profes-
 “ sor, the greatest judge of Musick that ever was, did, after his hu-
 “ mourfome way, stoop downe to Baltzar’s feet, to see whether he
 “ had a huff on, that is to say, to see whether he was a devil or not,
 “ because he acted beyond the parts of man.

“ About this time it was, that Dr. John Wilkins (*k*), warden of
 “ Wadham, the greatest curiofo of his time, invited him and some
 “ of the musitians to his lodgings in that coll. purposely to have a con-
 “ sort, and to see and heare him play. The instruments and books were
 “ carried thither, but none could be perswaded there to play against
 “ him in consort on the violin. At length the company perceiving
 “ A. W. standing behind in a corner neare the dore, they haled him
 “ in among them, and play, forsooth, he must against him. Where-
 “ upon he being not able to avoid it, he took up a violin, as poor
 “ Troylus did against Achilles. He abashed at it, yet honour he
 “ got by playing with and against such a grand master as Baltzar
 “ was. Mr. Davis Mell was accounted hitherto the best for the
 “ violin in England ; but after Baltzar came into England, and
 “ shewed his most wonderful parts on that instrument, Mell was not
 “ so admired, yet he played sweeter, was a well-bred gentleman, and
 “ not given to excessive drinking as Baltzar was (*l*).

“ All the time that A. W. could spare from his beloved studies
 of English history, antiquities, heraldry, and genealogies, he spent
 “ in the most delightful facultie of Musick, either instrumental or

(*k*) Afterwards bishop of Chester, and called the *flying bishop*.

(*l*) At the restoration of King Charles II. Baltzar was placed at the head of his majesty’s new band of violins. His compositions have more force and variety in them, and consequently required more hand to execute them, than any Music then known for his instrument ; as appears by a MS. collection of his pieces, with which I was presented by the late Rev. Dr. Montagu North.

Ant. Wood tells us, that this celebrated violinist died in July 1663, and was buried in the cloister belonging to St. Peter’s church, at Westminster. And adds, that “ this person being much beloved by all “ lovers of Musick, his company was there- “ fore desired : and company, especially mu- “ sical company, delighting in drinking, “ made him drink more than ordinary, “ which brought him to his grave.” *A. Wood’s Life*, p. 190.

“ vocal ;

"vocal ; and if he had missed the weekly meetings in the house of
 "W. Ellis, he could not well enjoy himself all the week after.
 "Of all or most of the company, when he frequented that meeting,
 "the names are set downe under the year 1656. As for those that
 "came in after, and were now performers, and with whom A. W.
 "frequently played, were these : Charles Perot, M. A. fellow of
 "Oriel Coll. a well-bred gentleman, and a person of a sweet nature;
 "Christ. Harrison, M. A. fellow of Queen's Coll. a magget-headed
 "person and humourous ; Kenelm Digby, fellow of Alls. Coll. he
 "was afterwards Dr. of L. he was a violinist, and the two former
 "violinists ; Will. Bull, M. A. for the viol and violin ; John Vin-
 "cent, M. A. a violist ; Sylvanus Taylor, fellow of Allsoules Coll.
 "violist and songster, his elder brother, Capt. Silas Taylor, was a
 "composer of Musick, played and sung his parts ; Henry Langley,
 "M. A. a violist and songster ; Sam. Woodford, M. A. a violist ;
 "Franc. Parry, M. A. a violist and songster ; Christ. Coward, and
 "Henry Bridgman, both masters of arts ; Nathan Crew, M. A.
 "a violinist and violist, but alwaies played out of tune, as having
 "no good eare, he was afterwards bishop of Durham ; Matthew
 "Hutton, M. A. an excellent violist ; Thom. Ken, of New Coll.
 "afterwards bishop of Bath and Wells, he would be sometimes a-
 "mong them and sing his part ; Christ. Jefferyes, a junior student
 "of Ch. Ch. excellent at the organ and virginals, or harpsicon,
 "having been trained up to those instruments by his father Georg
 "Jeffryes, organist to King Charles I. at Oxon. Richard Rhodes,
 "another junior student of Ch. Ch. a confident Westmonasterian,
 "a violinist to hold between his knees.

"These did frequent the weekly meetings, and by the help of
 "publick masters of Musick, who were mixed with them, they were
 "much improved. Narcissus Marsh would come sometimes a-
 "mong them, but seldom played, because he had a weekly meeting
 "in his chamber, where masters of Musick would come, and some
 "of the company before-mentioned. When he became principal
 "of St. Alban's hall, he translated the meeting thither, and there it
 "continued, when that meeting at Mr. Ellis's house was given
 "over,

“over, and so it continued till he went over to Ireland, where he
“became afterwards archbishop of Tuam.

“After his majesty’s restoration, when the masters of Musick
“were restored to their several places that they before had lost, or
“gotten other preferment, the weekly meetings at Mr. Ellis’s house
“began to decay, because they were only held up by scholars who
“wanted directors and instructors. So that these meetings were
“not continued above 2 or 3 yeares, and I think they did not go
“beyond 1662.”

Our Oxford annalist terminates his account of the musical trans-
actions of that university, during the Interregnum, by the following
anecdote.

“In Oct. 1659, James Quin, M. A. and one of the senior stu-
“dents of Ch. Ch. a Middlesex man borne, but son of Walter
“Quin, of Dublin, died in a crazed condition. A. W. had some
“acquaintance with him, and hath several times heard him sing
“with great admiration. His voice was a bass, and he had a great
“command of it. ’Twas very strong and exceeding trouling, but
“he wanted skill, and could scarce sing in consort. He had been
“turned out of his student’s place by the visitors; but being well
“acquainted with some great men of those times, that loved Mu-
“sick, they introduced him into the company of Oliver Cromwell,
“the protector, who loved a good voice and instrumental Musick
“well. He heard him sing with very great delight (*m*), liquored
“him with sack, and in conclusion said: *Mr. Quin, you have done*
“*very well, what shall I do for you?* To which Quin made an-
“swer with great compliments, of which he had command with a
“great grace, that *your highness would be pleased to restore him to*
“*his student’s place;* which he did accordingly, and so kept it to his
“dying day.”

If this minute and indiscriminate antiquary and biographer is some-
times thought to want taste and selection sufficient to give his re-
cords due weight, it must be ascribed to the constant habit he was
in of journalizing, collecting anecdotes, and making memorandums
of every person, transaction and circumstance that arrived at his

(*m*) Here’s a man who though he seems to have had *Musick in his soul*, yet it did not render him *unfit for treasons, stratagems, and spoils.*

knowledge,

knowledge, in the uncouth and antiquated language of his early youth. For this dialect being inelegant and vulgar, even when he learned it, renders his writings frequently ridiculous, though they contain such information as can be no where else obtained. But the few opportunities he had of knowing the gradual changes in our colloquial dialect, by conversing with men of the world, or even the language of elegant books by his favourite course of reading, degrade him to a level with writers infinitely his inferiors both in use and entertainment. An excellent apology has been made for his imperfections by the editor of his life, written by himself, and published, 1772; which is so interesting, that he must be an incurious enquirer, indeed, who, having dipped into it, is not sufficiently fascinated by the original simplicity of the style and importance of many of the anecdotes, to give it an entire perusal before he lays it down. Ant. Wood was credulous, and perhaps too much an enthusiast in Music to speak of its effects with critical and philosophical precision; however, without his assistance, the state of the art at Oxford, and the academical honours bestowed on its professors, as well as memoirs of their lives and works, would have been difficult to find. Upon his decisions in matters of taste, we are not always perhaps implicitly to rely. The high character he has given Dr. Wilson's productions and abilities may have proceeded from want of experience, knowledge, and penetration into the finer parts of the art; and as to Dr. Rogers, his judgment of him seems to have been manifestly warped by friendship. Yet, upon the whole, it must be allowed that it is only from such minute records as those of A. W. that any true and satisfactory knowledge can be acquired of the characters, manners, and domestic occurrences of our ancestors. The great features of history, and the events which occasion the ruin or prosperity of a state, must be nearly the same in every age and country; but comforts, conveniences, and the distresses of private life, furnish the mind with reflexions far more varied and interesting to the generality of mankind, than the rise of states or downfall of kings and heroes.

C H A R L E S II.

The nation tired of the gloomy and tyrannical government of Cromwell, manifested how much they languished for the restoration of Royalty, by the degree of enthusiasm and intoxication with which they received the son of their murdered sovereign. After the fatal disputes concerning regal prerogative, and the noble struggle made at the beginning of the troubles, by men of principle, with motives truly honest and patriotic; it seems as if this had been one of those favourite moments for amicably settling the limits of power and extent of civil liberty, which nothing but a similar concussion and total dissolution of ancient compacts, could again produce. Charles, at a distance from the throne, would cheerfully have submitted to terms, which, when he had ascended it, he opposed with all the power with which he was hastily invested. This was a time for a new, clear, comprehensive, and indisputable *Magna Charta*, which would have preserved our future kings from violent encroachments on their just and constitutional rights, and the people from invasions of their liberties, and all the turbulence, tumults, and disaffection, which have since appeared in so many different shapes.

The republican and fanatical spirit, though by no means annihilated, was, however, obliged to give way to the riotous and unbounded joy of the adherents to royalty, and friends to ancient establishments, in church and state. It is not difficult to imagine how their exultation would operate in such circumstances: indeed, that delight must be excessive, which can make so great a part of a nation unanimous in forgetting, or at least neglecting, their own interests. Charles's ancestors had been accustomed to *free-gifts*, some of which had more the appearance of extorted surrenders of property, than emanations of love and liberality; but now it seems as if the nation would not only have willingly parted with all their ancient charters, but titles to estates and most valuable possessions, to please and gratify the immediate descendant of that prince who had so lately lost his head on a scaffold! Thus are men governed! not by reason or establish-
ed

ed forms, but by the passions that are afloat, and accidental circumstances of the times ; which, like volcanic eruptions, are equally unforeseen and irresistible.

The restoration of monarchy, and religious establishments, drew from their retreats all the surviving musicians who had been degraded and involved in the calamities occasioned by the Civil War, and subversion of the national government and established church. Many had died in, and during, the conflict. No more than nine of the six and twenty bishops were living ; and death had probably made the like havoc among other orders of men, in proportion to age and numbers. Of those that fell by the sword, I know not the exact calculation ; but, except archbishop Laud, the prelates may be supposed to have died in their beds. Of the gentlemen of Charles the First's chapel, none seem to have claimed their former station, but Dr. Wilson, Christopher Gibbons, and Henry Lawes. The last, indeed, did not long survive the Restoration.

When the liturgy had been declared by an ordinance passed in the House of Lords, Jan. 4th, 1644, a *superstitious ritual*, the Directory, published by the assembly of divines at Westminster, to whom the parliament referred all matters concerning religion, established a new form of divine worship, in which no Music was allowed but psalm-singing, for which the following rules were enjoined.

“ It is the duty of Christians to praise God publickly by singing of psalms together, in the congregation, and also privately in the family. In singing of psalms the voice is to be audibly and gravely ordered ; but the chief care must be to sing with understanding and with grace in the heart, making melody unto the Lord. That the whole congregation may join herein, every one that can read is to have a psalm-book, and all others, not disabled by age or otherwise, are to be exhorted to learn to read. But for the present, where many in the congregation cannot read, it is convenient that the minister, or some fit person appointed by him and the other ruling officers, do read the psalm, line by line, before the singing thereof (n).”

(n) The Methodists, and some of our parish-clerks, still adhere to this custom.

In the opinion of those that were then in power, it was thought necessary for the promotion of true religion, that no organs should be suffered to remain in the churches; that choral-books should be torn and destroyed; painted glass windows broken; the cathedral service totally abolished; and that those retainers to the church, whose function had been to assist in such profane vanities, should betake themselves to some employment less offensive to the Lord. In consequence of these tenets, collegiate and parochial churches had been stripped of their organs and ornaments; monuments defaced; sepulchral inscriptions engraven on brass torn up; libraries and repositories ransacked for musical service-books of every kind, which being all deemed alike superstitious and ungodly, were committed to the flames, or otherwise destroyed, and the utmost efforts used at total extirpation. And, indeed, their endeavours had been so effectual, that when the heads of the church set about re-establishing the cathedral service, it was equally difficult to find instruments, performers, books, and singers able to do the requisite duty. For organ builders, organ players, and choirmen, having been obliged to seek new means of subsistence, the former became common carpenters and joiners; and the latter, who did not enter into the king's army, privately taught the lute, virginal, or such miserable psalmody as was publickly allowed.

Child, Christopher Gibbons, Rogers, and Wilfon, were created doctors, and these, with Low of Oxford, though advanced in years, were promoted; Child, Gibbons, and Low, were appointed organists of the Chapel Royal, and Capt. Henry Cook master of the children (*o*). Gibbons was likewise organist of Westminster Abbey; Rogers, who had formerly been organist of Magdalen College, Oxford, was preferred to Eton; Wilfon had a place both in the Chapel and Westminster Abbey; and Albertus Bryne, a scholar of John Tomkins, was appointed organist of St. Paul's, where he had been brought up.

(*o*) Cook had been bred up in the King's Chapel, but quitted it at the beginning of the Rebellion; and, in 1642, obtaining a

captain's commission, he retained the title of *captain* ever after.

In this manner the several choirs throughout the kingdom were gradually supplied with able masters. At first, however, for want of boys capable of performing the duty, the treble parts were either played upon cornets, or sung by men in falset. And, indeed, the cathedral service had so long been laid aside, that scarcely any two organists in country cathedrals performed it alike; till the appearance of a little book of instructions, which had been drawn up by Edward Low, and printed at Oxford in 1661, entitled, "Some short Directions for the Performance of Cathedral Service." Low, who had been brought up in Salisbury cathedral, and appointed organist of Christ-church, Oxford, in 1630, was, for some time, according to Ant. Wood, deputy Music-professor to Dr. Wilson, and upon Wilson's quitting the University, he was appointed to succeed him in the professorship. Wood says, though he was never honoured with a degree, he was esteemed a very judicious man in his faculty. His book was reprinted in 1664, under the title of "A Review of some short Directions for the Performance of Cathedral Service." Nothing of this kind had appeared since Marbeck's book, in 1550, described in Vol. II. p. 578; and as it is now more than 120 years since the second edition of Low's little tract was published, it seems high time for another to be drawn up by some able and regular bred organist, or choral performer, in one of the choirs of the metropolis.

The services and anthems at first chiefly used were those contained in Barnard's printed collection, with such others as could be recovered in manuscript, till new compositions were added by the reinstated and new-appointed masters.

As to organs, the difficulty of procuring them, upon short notice seems to have been greater than of finding either performers or Music to perform: for, except Dallans, Loosemore of Exeter, Thamar of Peterborough, and Preston of York, scarce a tolerable organ-builder could be found in the whole kingdom. After the suppression of cathedral service and prohibition of the liturgy, some of the ecclesiastical instruments had been sold to private persons, and others but partially destroyed; these being produced, were hastily repaired

and erected for present use by the workmen just mentioned. Dal-
lans, indeed, is said to have been employed to build a new organ for
St. George's chapel, at Windsor; which perhaps, from the haste
with which it was constructed, though its appearance was beautiful
and magnificent, did not prove so excellent as was expected.

A sufficient number of workmen for the immediate supply of ca-
thedrals and parish churches, with organs, not being found in our
own country, it was thought expedient to invite foreign builders of
known abilities to settle among us; and the premiums offered on
this occasion brought over the two celebrated workmen, Smith, and
Harris.

BERNARD SCHMIDT, as the Germans write the name, brought
over with him from Germany, of which country he was a native,
two nephews, Gerard and Bernard, his assistants; and to distinguish
him from these, as well as to express the reverence due to his abilities,
which placed him at the head of his profession, he was called FA-
THER SMITH. The first organ he engaged to build for this country,
was for the Royal Chapel at Whitehall, which being hastily put
together, did not quite fulfil the expectations of those who were
able to judge of its excellence. An organ is so operose, complicated,
and comprehensive a piece of mechanism, that to render it complete
in tone, touch, variety, and power, exclusive of the external beau-
ty and majesty of its form and appearance, is perhaps one of the
greatest efforts of human ingenuity and contrivance. It was pro-
bably from some such early failure, that this admirable workman
determined never to engage to build an organ upon short notice, nor
for such a price as would oblige him to deliver it in a state of less
perfection than he wished. And I have been assured by Snetzler,
and by the immediate descendants of those who have conversed with
father Smith, and seen him work, that he was so particularly careful in
the choice of his wood, as never to use any that had the least knot or
flaw in it; and so tender of his reputation, as never to waste his time
in trying to mend a bad pipe, either of wood or metal; so that
when he came to voice a pipe, if it had any radical defect, he in-
stantly threw it away, and made another. This, in a great mea-
sure,

ture, accounts for the equality and sweetness of his stops, as well as the soundness of his pipes, to this day.

Smith had not been many months here, before HARRIS arrived from France, with his son *René Renatus*, an ingenious and active young man, to whom he had confided all the secrets of his art. However, they met with but little encouragement at first, as Dallans and Smith had the chief business of the kingdom; but upon the decease of Dallans, who died while he was building an organ for the old church at Greenwich, 1672, and of the elder Harris, who did not long survive him, the younger became a very formidable rival to Smith.

The contention between these eminent artists at the time of erecting the admirable organ which still stands in the Temple-church, was carried on with such spirit, not to say violence, as perhaps never happened before, or since, on a similar occasion.

About the latter end of King Charles the Second's reign, the master of the Temple and the benchers being determined to have as complete an organ erected in their church as possible, received proposals from both these eminent artists, backed by the recommendation of such an equal number of powerful friends and celebrated organists, that they were unable to determine among themselves which to employ. They therefore told the candidates, if each of them would erect an organ, in different parts of the church, they would retain that which, in the greatest number of excellences, should be allowed to deserve the preference. Smith and Harris agreeing to this proposal, in about eight or nine months, each had, with the utmost exertion of his abilities, an instrument ready for trial. Dr. Tudway living at the time, the intimate acquaintance of both, says that Dr. Blow and Purcell, then in their prime, performed on father Smith's organ, on appointed days, and displayed its excellence; and, till the other was heard, every one believed that this must be chosen.

Harris employed M. Lully, organist to Queen Catharine, a very eminent master, to touch his organ, which brought it into favour; and

and thus they continued vying with each other, for near a twelve-month.

At length, Harris challenged father Smith to make additional reed-stops in a given time; these were the vox-humana, *Cromorne* (*p*), the double Courtel, or double bassoon, and some others.

The stops which were newly invented, or at least new to English ears, gave great delight to the crouds who attended the trials; and the imitations were so exact and pleasing on both sides that it was difficult to determine who had best succeeded. At length, the decision was left to lord chief justice Jefferies, afterwards King James the Second's pliant chancellor, who was of that society, and he terminated the controversy in favour of father Smith; so that Harris's organ was taken away without loss of reputation, having so long pleased and puzzled better judges than Jefferies (*q*).

The Hon. Roger North, who was in London at the time of the contention at the Temple-church, says, in his *Memoirs of Music*, that the competition between father Smith and Harris, the two best artists in Europe, was carried on with such violence by the friends of both sides, that they "were just not ruined." Indeed, old Roseingrave assured me, that the partizans for each candidate, in the fury

(*p*) Not *Cremona*, or violin stop, as Dr. Tudway calls it, nor does the *double Courtel* mean the base flute. See *Walther's Dict.*

Cremorne means *soft horn*, and *double Courtel*, or *Curtel*, the *double bassoon*.

(*q*) Harris's organ, after its rejection at the Temple, was part of it erected at St. Andrew's, Holborn, and part in the cathedral of Christ-church, Dublin; but about thirty years ago, Byfield having been sent for to repair the latter, he prevailed on the chapter to have a new instrument, taking the old organ in exchange, as part of payment. Soon after, having had an application from the corporation of Lynn Regis, in Norfolk, to build them a new organ for St. Margaret's church, he wished very much to persuade them to purchase the instrument made by Harris, which had been a second time excommunicated; but being already in possession of an *old* organ, they determined to have a new one; and, by the advice of

the author of this book, employed Snetzler to construct one, which he did very much to his own credit and their satisfaction, consisting of thirty stops, three ranks of keys, and full compass. One of the metal stops of this instrument, called the *borduun*, is an octave below the open diapason, and has the effect of a double base in the chorus. It was in the Lynn organ that this builder first introduced that sweet stop called the *dulcian*, which he and Green have since so happily introduced as a solo stop, in their chamber organs. Part of the old organ at Lynn had been made by Dallans, the rest by some more ancient workman; as the wooden pipes were so worm-eaten as to fall to pieces when taken out to be cleaned. Upon the church-wardens asking Snetzler what this old instrument would be worth if repaired, he said, "if they would lay out a hundred pounds upon it, perhaps it would then be worth fifty."

of their zeal, proceeded to the most mischievous and unwarrantable acts of hostilities; and that in the night, preceding the last trial of the reed-stops, the friends of Harris cut the bellows of Smith's organ in such a manner, that when the time came for playing upon it, no wind could be conveyed into the wind-chest.

As the benchers of the Inner and Middle Temple are at all the expence of the organ in their church, and consequently appoint the maker, tuner, and players upon it themselves, in order to have this part of divine service as perfect as possible, they have the instrument tuned every Saturday, for which a salary of £. 20 a year is allowed; and that this excellent instrument may be the more seldom consigned to the hands of clumsy assistants, each of the societies elects an organist, at a salary of £. 50 (r).

Besides the sweetness of the several stops, and power of the chorus, in order to render the tuning more perfect, two of the five short keys are divided in the middle, and communicate to two different sets of pipes: so that G $\sharp$ and Ab, D $\sharp$ and Eb, are not synonymous sounds.

It being the fashion, during the latter end of the last century, to erect organs in the principal parish churches of the city of London, Harris seems to have built a greater number than Smith; among these some are thought very excellent, such as the organ at St. Mary Ax, St. Bride's, St. Lawrence, near Guildhall, and others (s).

In (r) The first organist of this church was Francis Piggot, who dying in 1704, was succeeded by his son. Upon the death of the younger Piggot, in 1726, Mr. Stanley was elected; and when I first arrived in London, 1744, Mr. James Vincent, son to Mr. Vincent of the guards, and brother to the performer on the hautbois, was his colleague. Mr. Jones, one of the present organists, was elected by the benchers, at the decease of Mr. Vincent, about the year 1750.

(s) It is not easy to discover what is meant by a late writer, when he says, that "the organs made by Smith, though, in respect of the workmanship, they are far short of those of Harris, and even of Dal-

lans, are justly admired." If the utmost care in the choice of the wood, and composition of the metal; the neatest and most happy manner possible of forming and voicing them; together with the most grateful sweetness, and durability of his pipes, may be called good workmanship, surely father Smith cannot, without injustice, be denied that praise in its full extent.—That part of the organ which was originally built for the Temple-church by Harris, and sent to Dublin, was sold after the death of the elder Byfield, by his widow, Harris's daughter, to Wolverhampton, for £. 500. It still stands in the church of that town, and is thought a very good instrument. The number of organs built and enriched with new stops

In consequence of the reputation which father Smith had acquired by every piece of work he had put out of his hands, since the organ at Windsor, he was employed to build an instrument for the cathedral of St. Paul; which is generally allowed to have the sweetest tone (except that at the Temple), the most noble chorus, and a swell which produces the finest effects of any in the kingdom. In short, it is an instrument in every respect worthy of that beautiful and stupendous structure (*t*). It seems as if Harris had been a candidate for building St. Paul's organ, as well as that at the Temple; for in the Spectator, No 552, for Dec. 3. 1712, a proposal of Mr. Renatus Harris is recommended in the following words: "The ambition of this artificer is to erect an organ in St. Paul's cathedral, over the west door, at the entrance into the body of the church, which in art and magnificence shall transcend any work of that kind ever before invented. The proposal in perspicuous language sets forth the honour and advantage such a performance would be to the British name, as well as that it would apply the power of sounds in a manner more amazingly forcible, than perhaps has yet been known, and I am sure to an end much more worthy. Had the vast sums which have been laid out upon operas without skill or conduct, and to no other purpose but to suspend or vitiate our understandings, been disposed this way, we should now perhaps have an engine so formed, as to strike the minds of half a people

by father Smith is prodigious, and their fame equal to that of the pictures or single figures of Raphael. A single stop known to be of his workmanship is still invaluable. The touch and general mechanism of modern instruments are certainly superior to those of Smith; but, for sweetness of tone, I have never met with any pipes that have equalled his in any part of Europe. At Oxford he built the organ at Christ church and St. Mary's; at Cambridge that of Trinity College; and in London those of St. Margaret, Westminster; St. Mary at Hill; St. Clement Danes; and others, all excellent.

(*t*) It is said, that notwithstanding the power of the chorus of this admirable instrument, several more excellent stops were made for it, which lay many years useless in the vestry, but for which Sir Christopher

Wren, tender of his architectural proportions, would never consent to let the case be sufficiently capacious to receive. And there is little doubt but that he had reason and science on his side. Indeed, I cannot help wishing, much as I admire the instrument, that it had been *entirely* kept out of its present situation, and placed on one side of the choir, that the whole extent of the structure from west to east might be seen, like St. Peter's at Rome, its prototype, at one glance. This was formerly the general place allotted to the organ in our cathedrals. At Canterbury its situation is still on the north side of the choir. At Chester the small primitive organ of that cathedral is still standing on the left side of the choir, though that which is now used is at the west end.

" at

“ at once, in a place of worship, with a forgetfulness of present care
 “ and calamity, and a hope of endless rapture, joy, and hallelujah
 “ hereafter (*u*).”

The establishment of Charles the Second's Chapel, at the time of the coronation, appears by the following entry in the cheque-book.

April the 23d, being St. George's day, 1661.

Dr. Walter Jones, subdean.		William Howes

(*u*) As this is one of Steel's papers it is probable that Harris had acquired his patronage and friendship by lending or building an instrument for his concert-room, in York-Buildings. If he had not been biased by some means or other, and had been a real judge of what he recommended, he would certainly have inserted the name of Bernard Smith in his paper, instead of Renatus Harris. When the professional merit of two artificers is not very unequal, small and often latent considerations turn the scale: acquaintance, figure, countenance, address, the misrepresentation and prejudice of others, all, or any one of them operating, will tear the bandage from the eyes of Justice.

The organ builders who succeeded father Smith and Harris were Schreider, who

built the organ in St. Martin's in the Fields, which King George I. presented to the church upon being chosen church-warden of the parish soon after his majesty's arrival in England; Schwarbrook, another German, who built several organs, but repaired more; with Byfield, Bridge, and Jordan, who after severally distinguishing themselves, entered into partnership and had nearly the whole business of the kingdom to themselves; till Snetzler, by the instrument he made for Lynn Regis, gave such a specimen of his abilities that he was soon called to almost every quarter of the kingdom. At present Green, an Englishman and an excellent mechanic, is deservedly in possession of the public favour.

Thomas Haynes, Serjeant of the Vestry.

William Williams, Yeoman.

George Whitaker, Yeoman.

Augustine Cleveland, Groom.

“ At which time every gentleman of the chapel in orders had
“ allowed to him for a gown five yards of fine scarlet; and the rest
“ of the gentlemen being laymen, had allowed unto each of them
“ foure yards of the like scarlet.”

The salaries of the gentlemen of the chapel had been augmented both by James I. and Charles I. and in the year 1663 Charles II. by the privy-seal, farther augmented them to seventy pounds a year; and granted to Capt. Cook and his successors in office, thirty pounds a year, for the diet, lodging, washing, and teaching each of the children of the Chapel Royal. A copy of this grant is entered in the cheque-book, and said to have been obtained by the solicitation of Mr. Cook.

The small stock of choral Music with which the chapel began, becoming in a few years somewhat less delightful by frequent repetition, the King perceiving a genius for composition in some of the young people of the chapel, encouraged them to cultivate and exercise it; and many of the first set of choristers, even while they were children of the chapel, composed anthems and services that are still used in our cathedrals. These, by the King's special command, were accompanied by violins, cornets, and sacbuts, to which instruments introductory symphonies and ritornels were given, and the performers of them placed in the organ-loft.

Dr. Tudway, in the dedication to the second volume of his manuscript Collection of English Church-music to lord Harley, assigns the following reasons for the change of style in the Music of the Chapel Royal, by a mixture of what he terms theatrical and secular.

“ The standard of Church Music begun by Mr. Tallis, Mr. Bird,
“ and others, was continued for some years after the Restauration,
“ and all composers conformed themselves to the pattern which
“ was set them.

“ His

“ His majesty, who was a brisk and airy prince, coming to the
 “ crown in the flower and vigour of his age, was soon, if I may so
 “ say, tired with the grave and solemn way which had been esta-
 “ blished by Tallis, Bird, and others, ordered the composers of his
 “ chapel to add symphonies, &c. with instruments to their anthems;
 “ and thereupon established a select number of his private Music to
 “ play the symphony and ritornellos which he had appointed.—
 “ The old masters of Music, Dr. Child, Dr. Gibbons, Mr. Low,
 “ &c. organists to his majesty, hardly knew how to comport them-
 “ selves with these new-fangled ways, but proceeded in their com-
 “ positions, according to the old style, and therefore there are only
 “ some services and full anthems of theirs to be found.

“ In about 4 or 5 years time, some of the forwardest and bright-
 “ est children of the chapel, as Pelham Humphrey, John Blow, &c.
 “ began to be masters of a faculty in composing; this his majesty
 “ greatly encouraged, by indulging their youthful fancies, so that
 “ every month, at least, they produced something new of this kind.
 “ In a few years more, several others, educated in the chapel, pro-
 “ duced their compositions in this style; for otherwise it was in vain
 “ to hope to please his majesty.”

CAPTAIN HENRY COOK, appointed master of the children of the
 Chapel Royal at the Restoration, according to Ant. Wood's MS.
 Memoirs in the Ashmol. Library, “ was esteemed the best musician
 “ of his time to sing to the lute, till Pelham Humphrey, his scholar,
 “ came up, after which he died of grief.”

We are told in the continuation of Sir Richard Baker's Chronicle,
 that Matthew Lock set the Music for Charles the Second's public
 entry, and Capt. Henry Cook for his coronation. A hymn of his
 composition, in four parts, is likewise said to have been performed
 instead of the litany in the chapel of St. George, at Windsor, by
 order of the sovereign and knights of the Garter, on the 17th of
 April, 1661. None of his Church Music was printed (x), and, in-

(x) In Christ-church College Library
 there is a MS. folio volume of Services and
 Anthems by Blow, Gibbons, Lock, Good-
 son sen. and *Capt. Henry Cook*. Dr. Tud-

way has inserted none of Cook's composi-
 tions in his Harleian Collection of English
 Church Music.

deed, if we may judge of that by his few secular compositions dispersed in the collections of the times, he was little fitted for the high office to which he was appointed at the Restoration.

In the second part of Playford's *Musical Companion*, 1667, there are two or three of his songs, which are dry, ill-accented, and equally destitute of melody and masterly harmony. However, he had the merit, or at least good fortune, to be the master of three boys among the children of the chapel, who gave very early testimonies of their genius and progress in composition. These were Pelham Humphrey, John Blow, and Michael Wise, who, even while they were choristers in the chapel, produced verse-anthems far superior in melody and design to any that our church could boast anterior to Purcell.

PELHAM HUMPHREY after continuing in the Chapel Royal, as a singing-boy, from the Restoration till he lost his treble voice, was admitted a gentleman of his majesty's chapel, Jan. 3d, 1666; and on the death of Cook, in 1672, was appointed master of the children. He did not, however, long fill this honourable station, as he died, very much regretted, at the early age of twenty-seven, in 1674.

His choral compositions are numerous, for so short a life; as, besides his seven full and verse anthems, printed by Dr. Boyce, there are five preserved in score by Dr. Aldrich, in Christ-church, Oxford; and six in Dr. Tudway's Collection, British Museum, that have never been printed.

As French Music was much better known in England during the reign of King Charles II. than Italian, there are in the melody of this composer and in that of Purcell, passages which frequently remind us of Lulli, whom King Charles pointed out to his musicians as a model. Indeed, it is said that Humphrey was sent to Paris by the King, in order to study under Lulli; and that, besides his merit in composition, he was an excellent performer on the lute. Indeed, he seems to have been the first of our ecclesiastical composers who had the least idea of musical pathos in the expression of words, implying supplication or complaint.

His

His anthem for three voices, *Have mercy upon me O God*, has great merit on the side of expression, for the time in which it was composed, as well as harmony, in which there are several combinations that seem new and boldly hazarded for the first time, at least in choral Music (y).

In his verse anthems, many new effects are produced by modulation and notes of taste and expression (z).

The favourite interval in the melody of this composer is the false 5th, and, if it be true, as related by Dr. Boyce, that Humphrey studied under Lulli at Paris, he probably acquired his partiality for this interval there, as it has long been in great favour in the serious French opera.

It is somewhat remarkable, that all the seven-verse anthems which Dr. Boyce has inserted in his collection, by this plaintive composer, should be in flat keys; most of them in C and F minor, which are much out of tune on the organ by the usual temperament of that instrument; however, if well sung, these crude chords may add to the melancholy cast of the compositions.

JOHN BLOW, born at North Collingham, in Nottinghamshire, was likewise one of the first set of children of the Chapel Royal after the Restoration, that was brought up under Capt. Cook. He likewise received instructions from Hingeston, domestic organist to Oliver Cromwel, and Dr. Christ. Gibbons. In 1673, he was sworn one of the gentlemen of the chapel; and in 1674, upon the decease of Humphrey, appointed master of the children. In 1685, he was nominated one of the private Music to King James II. and in 1687,

(y) Such as, in the first movement, a sharp 5th to Bb (Boyce, Vol. II. p. 235), used as an appoggiatura or note of taste; and the $\sharp^4$ to Ab used repeatedly in an unusual manner, with very good effect. P. 238, l. i. bar 4. the extreme sharp 6th to Ab, though now so common, had not made its way into our church, to my knowledge, before.

L. iii. bar 3. the E natural against B flat *à pedale* in the base, is a note of taste and feeling that required considerable courage

to venture, in those days of rigid rule and simplicity.

(z) See Boyce, Vol. III. p. 175. where the flat 3d and sharp 4th was then a new combination, in the church at least. But the natural 3d and flat 6th to Eb, in the same page, was not new, for it appears in the works of all the composers of the last century; and yet I never can let it pass uncensured. The three 5ths at the end of the movement, I can much more readily pardon, as two of them are false.

he

he was likewise appointed almoner and master of the choristers in the cathedral church of St. Paul; but, in 1693, he resigned this last place in favour of his scholar Jeremiah Clark.

Blow had his degree of doctor in Music conferred on him by the special grace of archbishop Sancroft, without performing an exercise for it in either of the Universities. On the decease of Purcell, in 1695, he was elected organist of St. Margaret's, Westminster. And, in 1699, appointed composer to the chapel of their majesties, King William and Queen Mary, at a salary of £. 40 a year, which afterwards was augmented to £. 73. A second composer, with the like appointment, was added in 1715, when John Weldon was sworn into that office; at which time it was required that each should produce a new anthem on the first Sunday of his month of waiting.

That Blow was a composer of anthems, while a singing-boy in the Chapel Royal, appears from Clifford's Collection of the Words of the Services and Anthems used in our collegiate and cathedral Churches, 1664(a); for among the ecclesiastical composers mentioned in this book, amounting to upwards of sixty, are included the names of Pelham Humphrey, John Blow, and Robert Smith, children of his majesty's chapel. Humphrey was born in 1647, and Blow in 1648; so that at the Restoration, the first being only thirteen, and the second but twelve, their composing anthems fit for the Chapel Royal, before they had attained the age of sixteen or seventeen, would now be regarded as more wonderful proofs of precocity, if Purcell, soon after, at a more early period of his life, had not produced compositions that were still superior to these.

Dr. Blow died in 1708, at sixty years of age; and though he did not arrive at great longevity, yet, by beginning his course, and mounting to the summit of his profession so early, he enjoyed a prosperous and eventful life. His compositions for the church, and

(a) The Rev. James Clifford, the compiler of this useful little book, according to Ant. Wood, was a minor canon of St. Paul's

cathedral, and chaplain to the honourable society of Serjeant's Inn, Fleet-street. He died about the year 1700.

his scholars who arrived at eminence, have rendered his name venerable among the musicians of our country (*b*).

Though his Church Music was never collected in a body, yet, besides the three services and ten full and verse anthems printed by Boyce, in Dr. Tudway's MS. Collection nineteen of his choral productions have been preserved; and in Dr. Aldrich's Collection in Christ-church there are five more. The aggregate of which, amounting to upwards of forty different compositions of this elaborate kind, is but a small part of what might be found in the chapel and choir-books of our cathedrals.

Some of his choral productions are doubtless in a very bold and grand style; however, he is unequal, and frequently unhappy, in his attempts at new harmony and modulation; but, as a composer who ranked so high among our most classical masters should not be praised or censured indiscriminately, I shall point out a few instances of his great, and, to my conceptions, unwarrantable licentiousness, as a contrapuntist.

I am as sorry to see, as to say, how confused and inaccurate a harmonist he was; but as it is necessary to speak of an artist so celebrated and honoured by his contemporaries, to dissemble his faults would surpass candour, and incur the censure of ignorance and partiality; for it is as much the duty of an historian to blame as to praise, when justice and integrity require it. Indeed, upon whatever subject a man writes, he should aspire at nothing so much as speaking truth, if he wishes for the approbation of his conscience, which is not only the most comfortable of all praise, but luckily the most within his own power. The abilities of the dead, I can have no interest in depreciating; and if my opinion should be unjust, the mischief will recoil on myself; for the dead have more friends than the living, who are ever ready to vindicate such wrongs.

Though there are strokes of pathetic and subjects of fugue in Blow's works that are admirable; yet I have examined no one of them that appears to be wholly unexceptionable, and free from con-

(*b*) On his tomb in Westminster Abbey is preserved a *canon* of a more pacific and harmless kind than any of those that adorn

the monuments of neighbouring heroes, his present associates.

fusion and crudities in the counterpoint. Of the two-part anthem with choruses, "Lord how are they increased," the first movement is very plaintive and expressive; but there are licences in the harmony which look and sound quite barbarous. Indeed, these crudities are so numerous as to throw a doubt on his learning, as well as genius. Whether they are notes of passion, effusions of an unruly spirit, or of ignorance and affectation, I will not venture to determine; but, to my ears, they have the full effect of jargon and want of principles.

It does not appear that Purcell, whom he did himself the honour to call his scholar, or Crofts, or Clark, his pupils, ever threw notes about at random, in his manner, or insulted the ear with lawless discords, which no concords can render tolerable.

In an anthem, "Turn thee unto me, O Lord," printed by Henry Playford in the second collection of *Divine Harmony*, there are so many wanton violations of rule, particularly in the last chorus, that it would be endless to point them out; but they seem such as no rule, authority, or effect, can justify: 7ths resolved on the 8th, ascending and descending; 2ds treated with as little ceremony as 3ds. Indeed, I never saw so slovenly a score in print; and it may, in general, be said of his *faults* in counterpoint, that there are *unaccounted millions* of them to be found in his works.

He has been celebrated by Dr. Boyce, for "his success in cultivating an uncommon talent for modulation;" but how so excellent a judge of correct and pure harmony could tolerate his licences, or reconcile them to his monumental character, and the additional praise he has himself bestowed upon him, is as unaccountable as any thing in Blow's compositions, considering the knowledge and known probity of the late worthy editor of our Church Music (c).

(c) In justification of so much seemingly severe censure of Dr. Blow's counterpoint, instead of *verbal criticism*, the reader shall be served with a *plate* full of his *deformities*, collected chiefly from his Church Music, the best of his productions. Many of his ballads, though only in two parts, are full of crude discords unprepared and unresolved; the cause of which, in some measure, may be ascribed to the *ground-bases*, on which it was now the fashion to write: for melody

being scarce, both that and the harmony were frequently injured by this Gothic restraint. But the passing-notes, and notes of embellishment of the composers, in general, of this period, were uncouth in melody and licentious in harmony. Perhaps those of the present times, in less than a century, will be equally unpleasing to the ears of posterity; and yet we fancy that both melody and harmony have received their last polish.

Pastoral Ballad, by D^r BLOW.

From the 4th Book of the Theatre of Musick.

Since the Spring comes on, and the teaming earth, gives plants and flow'rs a

kind-ly birth; since all things in one great design, of gai-ety and mirth com-

Fragment of a Ballad, in the Scots Style, from the *Amphion Anglicus*, Page 44.

The ballads of Dr. Blow are in general more smooth and natural than his other productions, and, indeed, than any other ballads of his time; there is more melody than in those of Henry Lawes, or any composers of the preceding reign; yet it is not of that graceful kind in which the Italians were now advancing towards perfection, with great rapidity. It is either of a Scots cast, or of a languid kind, that excites no other sensation than fatigue and drowsiness.

His pastoral, on the preceding plates, "Since the Spring comes on," is, however, as *chantant* as any mongrel mixture of Scots, Irish, French, and English, that has been since compiled. The first movement, particularly, seems to have been the model of most of the Vauxhall songs of the last forty years.

"Fill me a bowl," p. 52, has the same kind of merit (*d*).

The collecting his secular compositions into a folio volume in 1700, under the title of *AMPHION ANGLICUS*, was doubtless occasioned by the great success of the *ORPHEUS BRITANNICUS*, a similar collection of Purcell's Dramatic and Miscellaneous Songs, published by his widow, in 1698. But whether Dr. Blow was stimulated to this publication by emulation, envy, or the solicitation of his scholars and friends, by whom there are no less than fifteen encomiastic copies of verses prefixed to the work, the ungrateful public seems to have remained always insensible to these strains of the modern *Amphion*, which were not only incapable of building cities, but even of supporting his own tottering fame.

Some of his innumerable deformities from the *Amphion Anglicus* are added to those of his Church Music. "Go perjured man," is the best of all his secular productions; but that, which was an imitation of a duet by Carissimi, *Dite, O cieli*, is overloaded, in his *Amphion Anglicus*, with a laboured and unmeaning accompaniment. P. 44 and 46 of this collection, contain two of his best ballads, "Sabina has a thousand charms," and "Philander do not think of arms." In these ballads the union of Scots melody with the English, is first conspicuous. The subject of a song, p. 168, "Orinda's bright eyes," is likewise broad Scots*.

(*d*) The same song was set by the late Mr. Corfe, about forty years since, and re-

mained long in Bacchanalian favour.

* See the preceding plates.

MICHAEL WISE, another of the three eminent composers for the Church, that were fostered in the Chapel Royal immediately after the Restoration, was likewise a scholar of Capt. Henry Cook at the same time as Humphrey and Blow; and they all three not only surpassed their master in genius and abilities, but all our Church composers of the last century, except Purcell. However, they prepared the way for his bold and original genius to expand; as several new melodies, modulations, and happy licences, which I used to think entirely of his invention, upon an attentive examination of their works, appear to have been first suggested by these three fellow-students. Yet, what they had slightly and timidly touched, Purcell treated with the force and courage of a Michael Angelo, whose abilities rendered the difficult easy, and gave to what, in less powerful hands, would have been distortion, facility and grace.

Dr. Boyce has printed six of his verse and full anthems, which are admirable: and in Dr. Tudway's Collection, Brit. Mus. there are seven, and a whole service in D minor.

He was author of the celebrated two-part song, "Old Chiron thus preach'd to his pupil Achilles," which is still too well known to need praise or insertion here. Mich. Wise was killed in a street-fray at Salisbury, by the watchman, in 1687.

The first movement of his verse anthem for two voices, "The ways of Zion do mourn," is so beautiful and expressive, that I shall give it here as a specimen of grave and pathetic composition for the church, which no Music of other countries that I have hitherto discovered, of the same kind, and period of time, surpasses. The use the author has made of chromatic intervals at the word *mourn*, is not only happy and masterly, but *new*, even now, at more than a hundred years distance from the time when the anthem was produced! The whole composition seems to me admirable; and besides the intelligence and merit of the design, the melody is truly plaintive, and capable of the most touching and elegant expression of the greatest singers of modern times; the harmony too and modulation are such as correspond with the sense of the words, and enforce their expression.

ANTHEM,

Anthem by Michael Wise.

There is an elegance of phrase in a passage of the second movement of the preceding anthem, at the word *down*, which has been lately revived, and in great favour, with a very minute difference, among the first fingers of Italy (*e*).

Wise was a native of Salisbury, in which cathedral he was appointed organist and master of the choristers, in 1668; and in 1675, a gentleman of the Chapel Royal. In 1686, he was preferred to the place of almoner and master of the boys at St. Paul's. He is said to have been in great favour with Charles II. and being appointed to attend him in a progress, claimed, as king's organist for the time, the privilege of playing to his majesty on the organ, at whatever church he went.

The reign of Charles II. being more favourable to the progress of our native Church Music than any other, except that of Queen Elizabeth, the subject seems to merit more enquiry and discussion.

The first set of chapel-boys having matured into men so eminent as Humphrey, Wise, and Blow, excites a curiosity concerning the talents of their immediate successors; and this second class not only produced Dr. Tudway and Dr. Turner, men who afterwards arrived at elevated stations, but Henry Purcell! who, during a short life, and in an age almost barbarous for every species of Music but that of the church, manifested more original genius than any musician under similar circumstances, that my enquiries into the history of the art have yet discovered, in any part of Europe.

Though Tudway and Turner advanced far into the present century, they added but little to the progress of the art by their own productions or performance, and therefore we had better allow them

(*e*) The difference consists only in pointing the first note, and making the second and third notes semiquavers.

Though I admire the facility and expression of many compositions by Mich. Wise, I must here make a few remarks on his verse anthem, "Prepare ye the way of the Lord." In bar 4th of the first movement, (see Boyce, Vol. II. p. 258.) the second note seems an error of the press; there can be no doubt

but that instead of E it should be F. And at the 2d bar of the last line (p. 259), if F in the first treble is not made sharp, the effect must be very offensive; though the passage, when echoed by the first treble, necessarily requires an F natural. The sharp 3d and flat 6th so frequently occur in all the composers of this school, that it is endless to stigmatize this hateful combination any more.

a niche in this place, than encroach on room that belongs to their superiors, at a later period.

THOMAS TUDWAY, educated under Dr. Blow at the same time as Turner and Purcell, was one of the second set of children of the Chapel Royal after the Restoration (*f*). Soon after quitting the Chapel Royal, he was received into the choir at Windsor as a tenor singer. Tudway, like his fellow-disciples, endeavoured to distinguish himself early as a composer, and has inserted into the Collection of Church Music which he transcribed for lord Harley, an anthem of his own composition, in 1675, when he was only nineteen, with six more of his early productions for the church, of which the counterpoint is but ordinary and clumsy (*g*).

In 1681, at twenty-five years of age, he was admitted to the degree of bachelor of Music at Cambridge (*b*). And in 1705, upon her

(*f*) As he lived till the year 1726, and was seventy at the time of his decease, he must have been born in 1656; a *datum* which will render the chronology of the principal events of his life easy to settle. In all probability he was received into the chapel at eleven or twelve; but in 1664, being but eight years old, he could hardly be admitted into the choir at Windsor, as a *tenor* singer, as has been lately said; nor in 1671, at fifteen, is it likely that he should be invited to accept of the place of organist of King's Coll. Chapel, in the University of Cambridge.

(*g*) The words are likewise often inaccurately accented: he throws the accent of the word *triumph* upon the second syllable, like Handel; which, though but slight, is, indeed, the only resemblance between them.

(*b*) I have examined, in the Brit. Mus. the score of the anthem which he performed as an exercise upon this occasion. In the 1st bar of the tenor-part, there are two 5ths with the second violin; and the tenor being lower than the base, inverts the harmony unwarrantably. Bar 5th of the first verse, there is a 7th in the violin part, unprepared and unresolved. Indeed the whole is an incorrect and fanciful composition; and being transcribed by the doctor himself late in life (1715), this production does not say much for the improvement of his know-

ledge afterwards: indeed, it is so full of errors and confusion, that it will neither bear the test of the eye nor ear. It has been imagined, as a reason for Dr. Tudway's Music never having been much used in our cathedrals, that he was an enemy to *fugue* and *imitation*; but in all his compositions inserted in the Harl. Collect. there are as frequent attempts at fugue, as in the Church Music of any of his contemporaries: indeed, he is not dexterous at these contrivances; however, that does not preclude confusion in the utterance of the words, which are so distributed among the several parts, that no two of them, except at a close, are singing the same. All the old masters whom the doctor recommends as models, were so fond of fuguing that they never saw a series of sounds without trying to form them into a canon or a fugue; as the doctor never heard a sentence without endeavouring to extract from it a pun. It was the light *theatric* style, with symphonies, ritornels, and divisions, in which Humphrey, Blow, and Purcell so well succeeded, and which Crofts afterwards pushed to greater lengths, that Tudway means to depreciate; for not being able to keep pace with them in such airy flights, he tried to check and disgrace them by censure. See his dedication to lord Harley, Brit. Mus. Collect.

majesty

majesty Queen Anne visiting that University, he composed an anthem, "Thou, O God, hast heard my vows," which he performed as an exercise for a doctor's degree; and, after receiving that academical honour, he was appointed public professor of Music in that University (i).

He composed an anthem, "Is it true that God will dwell with men upon the earth?" on occasion of Queen Anne going to St. George's chapel, at Windsor, for the first time; and for this, and other occasional compositions, was permitted to style himself organist and composer extraordinary to that princess.

In the latter part of his life Dr. Tudway resided much in London, and was patronized by the Oxford family. The valuable scores of English Church Music, in six thick volumes quarto, which are now in the British Museum, No 7337, were transcribed by himself at this time.

It is said that he used to meet Prior, Sir James Thornhill, Christian the engraver, Bridgman the gardener, and other eminent artists, at lord Oxford's, once a week; and that Sir James drew all their portraits with a pencil, among which is Tudway playing upon the harpsichord. Prior wrote sportive verses under these drawings, which were in the possession of Mr. West, the late president of the Royal Society.

Dr. Tudway's picture is in the music-school at Oxford; at Cambridge he was longer remembered as an inveterate punster, than a great musician (k).

WILLIAM TURNER, another of the second set of chapel-children, and disciple of Dr. Blow, was sworn in gentleman of the Royal

(i) The Music-professorship at Cambridge is merely honorary; Dr. Staggins was the first that was appointed in 1684, and Dr. Tudway the second.

(k) In the time of the duke of Somerset's chancellorship at Cambridge, during the discontents of several members of that University at the rigour of his government and paucity of his patronage, Tudway, himself a malcontent, and joining in the clamour, said, "the chancellor rides us all, *without a bit in our mouths.*" Nor did the wicked

fin of punning quit him even in sickness; for having been dangerously ill of a quinsy and unable, for some time, to swallow either food or medicines; the physician who attended him, after long debates and difficulties, at length turning to Mrs. Tudway says, "Courage, madam! the doctor will get up May-hill yet, he has been able to swallow some nourishment:" the doctor cries out, "don't mind him, my dear, one *swallow* makes no summer."

Chapel 1669, as a counter-tenor singer, his voice settling to that pitch; a circumstance which so seldom happens, *naturally*, that if it be cultivated, the possessor is sure of employment: and, in consequence of its utility, soon after his reception into the Chapel Royal, he was appointed vicar-choral in the cathedral of St. Paul, and a lay-vicar of the collegiate church of St. Peter, Westminster. In 1696, he was admitted to the degree of doctor in Music at Cambridge.

Dr. Turner arrived at the great age of eighty-eight, and dying in 1740, was buried in the cloister of Westminster Abbey, in the same grave with his wife; who, being nearly of the same age, died but four days before him, after living together with great harmony of disposition, and felicity, near seventy years.

In many of our cathedral books there is an anthem, "I will always give thanks," which is called the *club-anthem*, on account of its having been composed by three masters in conjunction; but not, as has been said, by Dr. Boyce and others, "as a memorial of the strict friendship that subsisted between them:" for, according to Dr. Tudway, who remembered the transaction, and records it with the anthem in the Mus. Collect. Vol. III. "the anthem was composed by order of Charles II. at a very short notice, on account of a victory at sea over the Dutch, the news of which arrived on Saturday, and the King wishing to have the anthem performed the next day, and none of the masters choosing to undertake it, three of the children of the chapel, Humphrey, Blow, and Turner, performed the task (l)." *WILLIAM TURNER, ANOTHER OF THE CLUB*

There are two whole services (m), and several anthems of Dr. Turner's composition in Tudway's collection, with an ode for the solemnity of St. Cecilia's day, 1697, accompanied with violins and trumpets. To this there is a long symphony or overture, consist-

(l) The first victory obtained over the Dutch fleet, in the reign of Charles II. was in 1664, the second 1666; and as we had no other sea-engagement with that republic till 1672, when the composers ceased to be called *children*, it must have been for the se-

cond victory obtained during the first Dutch war, that the *club anthem* was set; Turner being one of the second set of chapel boys.

(m) One in E and one in A, both with sharp 3ds.

ing

ing of two movements, the second of which is in triple time, upon a ground, seemingly in imitation of Purcell, as the first movement is of Lulli. After this production, is inserted his anthem, "The king shall rejoyce," which is more in the style of a secular ode, than a composition for the church. The divisions, light and common in the last century, are now become extremely old-fashioned.

Among the church composers of Charles the Second's reign, who arrived at honours and distinction, besides those already mentioned, was Dr. CHRISTOPHER GIBBONS, son of Orlando Gibbons, and scholar of his uncle Ellis Gibbons, organist of Bristol. He had been honoured with the notice of Charles I. and was of his chapel. At the Restoration, besides being appointed principal organist of the Chapel Royal, private organist to his majesty, and organist of Westminster Abbey, he obtained his doctor's degree in Music at Oxford, in consequence of a letter written by his majesty Charles II. himself, in his behalf, which is inserted by Ant. Wood in the *Fasti Oxon.* Vol. II. Col. 158; who says, that he completed his degree in an act celebrated in St. Mary's church, July 11th, 1664.

The compositions of this master, which were not numerous, seem never to have enjoyed a great degree of favour; and though some of them are preserved in the Museum Collection, they have long ceased to be performed in our cathedrals. His abilities on the organ, however, must have been considerable, to entitle him to the stations he filled, at a time when the style of playing that instrument was so much more complicated and elaborate than at present. Dr. Blow, who, in singing and composition was educated by Capt. Cook, is said to have been a scholar on the organ of Dr. Christopher Gibbons, who died 1676.

The only church-composer of this reign, whose works are still retained in our choral service, of whom a particular account has not already been given, is BENJAMIN ROGERS, for whose fame Ant. Wood has manifested great zeal. This musician was born at Windsor, and brought up in that college under Dr. Nath. Giles; being employed there, first as a singing boy, and afterwards in the capaci-

ty of lay clerk or singing-man. Thence he went to Ireland, and was appointed organist of Christ-church in Dublin, where he continued till the breaking out of the Rebellion, in 1641; at which time being forced to quit his station, he returned to Windsor, where he was again reinstated as choirman; but being soon after silenced in consequence of the civil wars, he procured a subsistence by teaching in the neighbourhood. And during this time, according to his friend Ant. Wood, having addicted himself much to study, he acquired great credit as a composer, and produced several sets of airs, in four parts, for violins and an organ, which being then imagined the best that *could* be composed of that kind, were sent as great rarities to the archduke Leopold, afterwards emperor, and himself a great musician; and, upon their being performed by his band, they were very much admired (*n*).

In 1658, by the favour of his friend Dr. Ingelo he obtained the degree of bachelor in Music at Cambridge, and acquired great reputation in that University by his exercise. Soon after, on Dr. Ingelo going chaplain to Bulstrode lord Whitelock, into Sweden, he carried with him some of Ben Rogers's best compositions, which, upon being repeatedly performed in the presence of Christina, Queen of Sweden, were very much applauded.

At the Restoration he was appointed to compose the Music that was to be performed at Guildhall, on the day his majesty and his brothers the dukes of York and Gloucester dined there with the lord mayor, by which he greatly increased his reputation.

About this time he was chosen organist of Eton college, which he resigned soon after, on being invited to Oxford, where he was appointed to the same office in Magdalen college. And in 1669, upon opening the new theatre in that city, he was created doctor in Music. He continued, says Ant. Wood, in the University, where he was much esteemed, till the year 1685, when he was ejected, in company with the fellows of his college, by King James II. after

(*n*) It does not appear that these pieces, which were composed for two violins, a te-

nor, and a base, were ever printed.

which.

which he long resided in the skirts of the town, wholly disregarded (o).

"His compositions for instruments," says Ant. Wood, "whether in 2, 3, or 4 parts, have been highly valued, and were, 30 years ago, always first called for, taken out and played as well in the public Music schools, as in private chambers: and Dr. Wilson, the professor, *the greatest and most curious judge of Music that ever was*, usually wept when he heard them well performed, as being wrapt up in an ecstasy; or, if you will, melted down: while others smiled, or had their hands and eyes lifted up, at the excellence of them."

It is to be feared that instead of *weeping*, the wicked lovers of modern Music would now *laugh*, if they were to hear the quaint and starchy strains, and see on paper the ruffs and roll-ups of honest Ben Rogers at the opera-house, or professional concert, Hanover-square. But, alas! what is the secular Music that thirty years have not wrinkled, withered, and rendered superannuated!

Rogers and Child were too near each other to differ much in the style of their Church Music; and, indeed, they trod on the heels of our own times too much, for their modulation to have that solemn, and seemingly new, effect, on our ears, which the productions of the sixteenth century now afford. Dr. Aldrich would never have let Rogers's Music be laid by as old and useless lumber, if he had thought it original and good (p).

For

(o) Ant. Wood, in his *Fasti Oxon.* gives the following list of his miscellaneous works, which at present will excite no great curiosity in the lovers of Music, or desire to be possessed of them. "Compositions in two parts, treble and base, in a book entitled, Court Ayres, Pavins, Allemagnes, Courants, and Sarabands, London 1665. Also certain compositions in a book entitled, Cantica sacra, containing Hymns and Anthems, for two Voices, to the organ, both Latin and English, 1674. As also in the Latin Hymns and Psalms of four parts published by Playford."

Wood seems to have obtained this list from Rogers himself, as well as the account

of their favourable reception on the continent.

(p) There is certainly the same kind of merit in the Church Music of Dr. Rogers, as in that of Dr. Child: rich harmony, and natural modulation; and yet it may be asked, in his service in D minor, which begins so like Bevin's in D major, (see Boyce, Vol. I.) why, for two notes only, line ii. bar 5. he quitted the key of B, in order to give the chord of D? He has the same false accents as Tallis and Bird, on the words *höly, höly, höly*; and page 174, *Servānts—we mǎgnify; trüſt is in*; and in the *Nicene creed*, *bēgöſſen; Pīlāte*; and p. 184, l. i. bar 1. *I löök för*; with the major third and minor

3 A 2

sixth

For an account of the revival of psalmody in parts, in the manner allowed soon after the Reformation, I must refer my reader to the reign of Queen Elizabeth, where the subject is amply treated. It was honest John Playford who new strung the harp of David, and published, in 1671, the first edition of his "Psalms and Hymns in solemn Musick, in foure Parts on the common Tunes to Psalms in Metre used in Parish-churches. Also six Hymns for one Voice to the Organ," folio. The several editions of this work published in various forms, at a small price, rendered its sale very general, and psalm-singing in parts, a favourite amusement in almost every village in the kingdom.

The charter granted to the musicians of the city of Westminster by Charles I. had lain dormant from that time till the Restoration; but immediately after that event, the persons named in it, who were still living, determined to rescue Music from the disgrace into which it had fallen, and exert their authority for the improvement of the science, and interest of its professors. Fifty-two musicians, consisting of the King's band, and other professors, natives and foreigners, the most eminent of the time, were enrolled in this charter as the King's musicians; "and all such as are, and shall be the musicians of his majesty, his heirs and successors, shall from henceforth forever, by force and virtue of the said graunt, be a body corporate and politique, in deed, fact, and name, &c."

The other powers granted by this charter, allowed the corporation to meet from time to time, in order to make bye laws and impose fines on such as transgressed them, "which fines they shall have to their own use, &c."

In pursuance of these powers, the corporation hired a room in Durham Yard, in the Strand, within the city and liberty of Westminster. Their first meeting was on the 22d day of October, 1661,

sixth to E, in the usual offensive style of the times. In the *Magnificat*, a-way. Of the whole service, it must be confessed, that the harmony is in general correct and pure; though somewhat dry and monotonous. But the keys during the last century were not sufficiently ascertained, as appears in the best of our ecclesiastical composers. Pur-

cell's Funeral Anthem for Queen Mary, which was likewise his own, begins in Eb, and ends in G with a major third; though it only consists of one short movement. The modulation quits the original key, at the 3d bar, and is more in G minor, than any other key.

Nicholas Laniere then being marshal; from which day they proceeded to make orders, summoning, fining, and prosecuting the first professors who dared "to make any benefit or advantage of Musique in England or Wales," without first taking out a license from their fraternity. Among the instances of the exercise of their power, Jan. 13th, 1663, it was "ordered that Matthew Lock, Christopher Gibbons, Dr. Charles Colman, and William Gregory, do come to the chamber at Durham Yard, on Tuesday next, at two of the clock in the afternoon, and bring each of them ten pounds, or shew cause to the contrary."

This seems to have been one of the most oppressive and unmeaning monopolies with which the Stuarts had long vexed the nation. Such a tyranny as this over the professors of a liberal art, there is reason to fear, would be abused in whatever hands it was lodged. The college of physicians, which superintends the dispensations of life and death, may have its use by preventing or detecting *Charlatanerie*; but that the ministers of our innocent amusements should be subject to any other controul than that which the common law of the realm is empowered to exercise over men of all ranks and degrees in the state, seems at best but a wanton and useless, if not a noxious, delegation of power, which was less likely to benefit the public, or accelerate the progress of the art, than to enable artists to torment and harass each other.

It appears by the transactions of this corporation, the minutes of which are extant in the British Museum among the Harleian MSS. No 1911, that the meetings of its members continued no longer than 1679; when finding themselves involved in law-suits and incapable of enforcing the power they assumed, and penalties they threatened, it was thought most advisable to leave the art and artists to the neglect or patronage of the public.

To this unsuccessful *piece* of tyranny, the following may serve as a *farce*.

Every trade and occupation in France had formerly a superior or Coryphæus, who was dignified with the title of Roi or KING. The mercers, joiners, barbers, shoe-makers, and even sweep-chimneys had

had their particular monarch ; but exactions and tyranny by degrees occasioned the annihilation of this mock royalty.

The minstrels more tenacious and exact observers of ancient usages, have been last to preserve this precious image of antiquity. The King at arms, and the King of the minstrels, are all that remain of this high rank ; but the first has few tributaries, and his function is only occasional and transient ; whereas the power of the other is always in force and his empire exercised to the utmost limits of the kingdom.

The history of the first sovereign of the minstrels is unknown ; but it is recorded that after the death of CONSTANTINE, a famous fidler of the seventeenth century, the crown passed, in 1630, to DUMANOIR I. afterwards to DUMANOIR II. who, by a voluntary abdication, occasioned an interregnum, in 1685. Lewis XIV. saw with indifference this extinction of royalty, and even declared that it should not be revived.

This monarchy had been long agitated and torn by civil and foreign broils. The dancing-masters, assisted by their chief, had been pleading for fifty years against the vile artizans who dishonoured their profession, by lavishing their talents unworthily at ale-houses ; and insisted on having a string of their lyre or fidicula cut off, like that of Terpander and Timotheus, in order to reduce it to its ancient form of a *Rebec*, with three strings.

They, however, prosecuted the city dancing-masters, at Paris, and had them fined by a solemn decision, Jan. 14th, 1667.

No community was ever more disunited by *discords* and tumults : every court of justice rang with the noise of their *divisions*, and their quarrels enriched the law, whilst they empoverished themselves, and fretted to fiddle-strings, those bowels which had neither food nor feeling.

The interregnum lasted from 1685 to 1741, when GUIGNON, remarkable for the velocity of his fingers and bow on the violin, aspiring at royalty, the King graciously condescended to honour him with the minstrel crown, and his claims and titles were acceded to the 15th of June, the same year.

But

But this election stimulating him to the assumption of those prerogatives which formerly appertained to his high station, he had his rights to defend against an army of lawyers employed by musicians, particularly organists, who obtained over him a complete victory, and Guignon, in order to give an incontestible proof of his disinterestedness and moderation, as well as love for the arts, voluntarily and magnanimously resigned the crown and dignity of supreme lord and king of the minstrels. And by an edict of Mar. 1773, registered in parliament the 31st of the same month, his most Christian majesty totally and finally suppressed this office (q).

"King Charles II." says the Hon. Mr. North (r), "though a professed lover of Musick, had an utter aversion to *Fancies*, which was increased and confirmed by a successful entertainment given him by secretary Williams. After which the secretary had no peace, for the King, as was his custom, could not forbear whetting his wit upon *Fancy Musick*, and its patron the secretary; nor would he allow the matter to be disputed upon the point of superiority, but ran it all down, by saying, *have not I ears?* He could bear no Musick to which he could not beat time, which he constantly tried to do to all that was performed in his presence, which he generally heard standing. Of songs he only approved the soft *vein*, in triple time (s); which rendered that kind of movement fashionable among the masters and composers for the stage, as may be seen in the printed songs of the time.

"His majesty had once a wish, in order to compare styles, to hear the fingers of several nations: German, Spanish, Italian, French, and English, perform together on the court stage, at Whitehall. The Italians performed the celebrated trio of Ca-

(q) See *Essai sur la Mus. & Mercure de Fr.* for April, 1773.

(r) *Mem. of Musick*, MS.

(s) The young chapel composers, Humphrey, Blow, and Wise, by the introduction of several of these movements are accused by Dr. Tudway, and others, of indulging the King's French taste so far as to

introduce theatrical *corants* and dancing movements into their anthems. At present they have no such effect on our ears: they seem, indeed, less heavy than the anthems of the sixteenth century, which were almost all in common time; but are more like flow minuets, though more broken into divisions, than dancing minuets, or corants.

“riffimi, *Che dite, che fate*; and the English brought up the rear
 “under great disadvantage, with *I pass all my hours in a shady*
 “*old grove*; for though the King chose that song as the best, others
 “were not of his majesty’s opinion.

“The old way of concerts was laid aside by this prince immedi-
 “ately after his restoration, when he established his band of 24 vio-
 “lins, after the French model, and the style of Musick was changed
 “accordingly. So that French Musick became in general use at
 “court, and in the theatres; indeed, performers on the violin had
 “a lift into credit before this period, when *Baltzar*, a Swede, came
 “over, and did wonders upon it by swiftness and double stops (*t*).
 “But his hand was accounted hard and rough, though he made amends
 “for that by often tuning in the lyra way, and playing lessons con-
 “formable to it, which were very harmonious, as is manifest by
 “many of his pieces still extant.

“During the first years of King Charles’s reign, all the Musick
 “in favour with the beau-monde, was in the French style; which, at
 “this time, was rendered famous throughout Europe, by the works
 “of Baptiste Lulli, a Frenchified Italian, and master of the Court
 “Musick at Paris, who enriched the French Musick by Italian
 “harmony, which greatly improved their melody. His style was
 “theatrical, and the pieces called *branes*, or *ouvertures*, consisting
 “of an *entrée* and a *courante*, will ever be admired as the most
 “stately and complete movements in Musick. All the composers
 “in London strained hard to imitate Lulli’s vein. However, the
 “whole tendency of the ayre, affected the foot more than the ear;
 “and no one could listen to an *entrée*, with its starts and leaps,
 “without expecting a dance to follow.

“The French instrumental Musick, however, did not make its
 “way so fast as to bring about a revolution all at once; for, during
 “a great part of this King’s reign, the old Musick was still used in
 “the country, and in many private meetings in London; but the
 “treble viol was discarded, and the violin took its place.”

(*t*) See above, p. 427.

The taste of Charles II. seems to have been French in all things, but particularly in Music; for he had French operas; a band of twenty-four violins, in imitation of the French band at Paris; French masters of his band, Cambert, and, afterwards, Grabu; he sent Pelham Humphrey to study under Lulli, and young Banister to learn the violin at Paris. Indeed, though we have since had better models for our musical studies of all kinds, from Italy and Germany, Music, as well as every other liberal art, was at this time in a higher state of cultivation in France than in England. But though Lulli carried Italian dramatic Music into France, it was such as had been produced during the infant state of the art in Italy; yet, notwithstanding the subsequent improvements it received in its native country, from innumerable masters, particularly since they were furnished with lyric poetry by Metastasio, near a century elapsed before our neighbours the French perceived it possible to compose better Music than that of Lulli.

Upon the decease of Baltzar, the Lubecker, who was the first leader of King Charles's new band of twenty-four violins, &c. Banister, the first Englishman who seems to have distinguished himself on the violin, which was now growing into favour, succeeded him. This is the same Banister who set Dr. D'Avenant's opera of *Circe*, and several ayres and dialogues of the times, in which no *specific* mark of genius seems discoverable. This musician was one of the first who established lucrative concerts in London.

These concerts were advertised in the London Gazette of the times; and in No 742. for Dec. 30th, 1672, there is the following advertisement: "These are to give notice, that at Mr. John Banister's house, now called the Musick-school, over against the George taverne, in White Fryers, this present Monday, will be Musick performed by excellent masters, beginning precisely at four of the clock in the afternoon, and every afternoon for the future, precisely at the same hour."

There are other advertisements from Banister of the same kind, in 1674, 1676, and 1678. In that for Dec. 11th, 1676, his musical performance is said to be "At the *academy* in little Lincoln's-

“Inn Fields,” where it was to begin “with the parley of instruments, composed by Mr. Banister, and performed by eminent masters.”

In Mr. North’s manuscript *Memoirs of Music*, we have a more minute account of these performances. “Banister having procured a large room in White Fryars, near the Temple back-gate, and erected an elevated box or gallery for the musicians, whose modesty required curtains, the rest of the room was filled with seats and small tables, ale-house fashion. One shilling, which was the price of admission, entitled the audience to call for what they pleased. There was very good Musick, for Banister found means to procure the best hands in London, and some voices to assist him. And there wanted no variety, for Banister, besides playing on the violin, did wonders on the flageolet to a thro’ base, and several her masters likewise played solos.”

Banister, who died in 1679, had his first lessons in Music from his father, who was one of the waits in the parish of St. Giles in the Fields. He left behind him a son, John Banister, who became an eminent performer on the violin; he was one of King William’s band, and played the first violin at Drury Lane when operas were first performed there. Mr. North says, “It would be endless to mention all the elegant graces, vocal and instrumental, which are taught by the Italian masters, and perhaps outdone by the English Banister.”

In 1678, a year before the decease of the elder Banister, the club or private concert established by THOMAS BRITTON, the celebrated small-coal man, in Clerkenwell, had its beginning, and continued till 1714. About the year 1680, the principal masters in London perceiving an eagerness in the public for musical performances, had a room built and purposely fitted up for concerts, in York-Buildings, where the best compositions and performers of the time were heard by the first people in London. This was called *the Music Meeting*. And this room was long the place where the lovers of Music assembled at the benefit concerts of the most eminent professors of the art.

Having commemorated the chief musical events of this long
and

and chearful reign, I shall now present the reader with a list of the publications which it produced relative to the theory and practice of the art.

The first theoretical or didactic book that appeared on the subject of Music, after the Restoration, was a tract, printed in a small size, entitled, "Short Directions for the Performance of Cathedral Service, by Edward Low, Oxon. 1661." This little useful book was reprinted, by the title of "A Review of some short Directions formerly printed, for the Performance of Cathedral Service, with many useful Additions according to the Common Prayer-book, as it is now established. Published for the Information of such as are ignorant in the Performance of that Service, and shall be called to officiate in cathedral or collegiate Churches; or any other that religiously desire to beare a Part in that Service, by E. L. Oxon. 1664."

Besides the order of the cathedral service and notation of the *preces*, *versicles*, and *responses*, it contains chants for the psalms and *Te Deum*, some of them in four parts, with Tallis's Litany in counterpoint; the burial service by Robert Parsons, and the *Veni Creator*, all in four parts.

"Collection of divine Services and Anthems usually sung in his Majesties Chapell, and in all the cathedral and collegiate Choirs, of England and Ireland, 1664, by James Clifford," 12mo (*u*). This work is here classed among instructive books; as, besides two prefaces, one of which contains chants for the *Venite*, *Te Deum*, *Benedicite*, *Jubilate*, *Magnificat*, *Cantate Domino*, *Nunc Dimittis*, *Deus misereatur*, the psalms, and *Quicumque vult*, there are "brief directions for the understanding of that part of the divine service performed with the organ in St. Paul's cathedral on Sundayes, &c." At the end of the book the author informs the musical reader, that the best of our masters of later times had found it expedient to reduce the six syllables of solmisation to four, changing *ut*, *re*, to *sol*, *la*; so that at this time it appears, that the sounds of the scale and mutations were generally expressed in England by *mi*, *fa*, *sol*, *la*, only. This

(*) See above, p. 366.

book contains the words of the services and anthems of near seventy of our church-composers, whose works were in use in cathedrals soon after the Restoration, the most eminent of whom have been already mentioned in the course of this history.

“*Templum Musicum*, or the musical Synopsis of the learned and famous *Johannes Henricus Alstedius*; being a Compendium of the Rudiments both of the mathematical and practical Part of Musick; of which Subject not any Book is extant in the English Tongue. Faithfully translated out of the Latin, by John Birchenha. London, 1664.”

This book consists of little more than dry definitions, which will be found wholly unintelligible to all, but such as are in no want of them. The author of the original, ALSTEDIUS, was a German divine, and a Lutheran; his writings are very voluminous, of which the chief are his *Thesaurus Chronologicus*, and *Encyclopædia*; of which the last had the merit of being written upon a new plan, that has been since often adopted (x).

The translator, JOHN BIRCHENSHA, seems to have been a kind of musical adventurer with sufficient literature and science to have imposed on the fellows of the Royal Society, by a long and splendid advertisement, to which admission was given in the *Philosophical Transactions*, for the year 1672, page 5153. In this advertisement is given the plan of a treatise on Music, which seems never to have been published. It is drawn up with a scientific air, but promises too much; not only what this author never performed, but what never has nor ever will be performed by any other. As an apology for so peremptory an assertion, the musical reader is desired to pause and consider the following proposition, which constitutes the fifth article of his advertisement.

“An easy way is by this author invented for making airy tunes of all sorts by a certain rule, which most men think impossible to be done; and the composing of two, three, four, five, six, and

(x) This author died in 1638. When his book was first published, I know not, but his mention of the syllable *si*, as a name for

the seventh of a key, and to obviate the difficulty of the mutations seems to precede its use in France.

“seven

“ seven parts, which by the learner may be done in a few months,
 “ viz. in two months he may exquisitely, and with all the elegancies
 “ of Musick, compose two parts; in three months, three parts;
 “ and so forward, as he affirms many persons of honour and worth
 “ have often experienced, which otherwise cannot be done in many
 “ years.”

“ A Compendium, or Introduction to practical Musick, by
 “ Christopher Simpson, 1667.” Of this tract an account has al-
 ready been given, above. As far as it goes, this work has consider-
 able merit for its clearness and simplicity. It was long in favour as
 an elementary book; and, from the time of its first publication to
 1722, it went through six editions.

“ An Essay to the Advancement of Musick, by casting away the
 “ Perplexity of different Cliffs; and uniting all Sorts of Musick,
 “ Lute, Viols, Violins, Organ, Harpsichord, Voice, &c. in one
 “ universal Character, by Thomas Salmon, A. M. of Trinity Col-
 “ lege, Oxford.” London, 1672. This book is well written,
 and, though very illiberally treated by Lock, Playford, and some
 other professors, contains nothing that is either absurd or imprac-
 ticable; nor could I discover any other solid objection to its doctrines
 being adopted, than the effect it would have upon old Music, by
 soon rendering it unintelligible. At present the tenor cliff alone is
 thought an unsuperable difficulty in our country, by Dilettanti per-
 formers on the harpsichord; but if Salmon’s simple and easy mu-
 sical alphabet were chiefly in use, the base cliff would likewise be
 soon rendered as obsolete and difficult as the tenor; so that two
 parts or cliffs out of three, in present use, would become unintelli-
 gible. The author’s plan was simply this: instead of the eight or

nine cliffs that were then in use, as,

to express the whole scale of sounds on the five lines and spaces in
 this simple manner:

G in every part of the scale being on the first line, *a* on the first space, *b* on the second line, &c. the letters preceding each septenary implying base, mean, treble, supreme.

This innocent and ingenious proposal was treated by Lock, in a pamphlet entitled, "*Observations on a late Book called an Essay, &c.*" not only with contempt, but obloquy and unbridled abuse. There is a portrait of Lock in the Music-school at Oxford, by the countenance of which, without Lavater's assistance, or adverting to his treatment of Salmon, and the asperity of his other writings, we are impressed with more than a suspicion of his ungentleness and want of urbanity.

Lock is supposed to have been the first who published rules for thorough base, or accompaniment on keyed-instruments, in a book entitled, *Melothesia*, London, long quarto, 1673. It was dedicated to Roger L' Estrange, Esq. afterwards Sir Roger L' Estrange, himself a good judge, and of an ancient Norfolk family that always cultivated and encouraged Music in an eminent degree. This publication, besides the rules for accompaniment, contains lessons for the harpsichord and organ, by himself and other masters.

Philosophy and science, during this century, seem to have interested themselves, and lent their aid in the refinement and melioration of musical sound, more than at any other period. Sir Francis Bacon, Kepler, Galileo, Merfennus, Des Cartes, Kircher, and, after the establishment of the Royal Society in London, lord Keeper North, lord Brouncker, Narcissus bishop of Ferns, Dr. Wallis, Dr. Holder, and Sir Isaac Newton, have all thought harmony and the philosophy

philosophy of sound objects worthy of their most profound meditations and researches. Though this is not the place to specify the particular subjects in harmonics to which these illustrious mathematicians pointed their enquiries, or to describe their success and effects; yet it seems necessary, among the publications expressly on the subject of Music during this reign, to mention an ingenious tract in quarto, 1677, written by the lord Keeper North, entitled, "A Philosophical Essay of Musick, directed to a Friend." Though some of the philosophy of this essay has been since found to be false, and the rest has been more clearly illustrated and explained, yet considering the small progress which had been made in so obscure and subtil a subject as the propagation of sound when this book was written, the experiments and conjectures must be allowed to have considerable merit. The *scheme*, or table of pulses, at the beginning, shewing the coincidence of vibrations in musical concords, is new, and conveys a clear idea to the eye, of what the ratio of sounds, in numbers, only communicates to the intellect. These coincidences, upon which the degrees of perfection in concords depend, being too rapid for the sense of hearing to enable us to count, are here delineated in such a manner, as explains the doctrine of vibrations even to a person that is deaf. This pamphlet, containing only 35 pages, was published without the name of the author; but afterwards acknowledged to have been the work of lord Keeper North, in the life of that nobleman, written by his brother, the Hon. Roger North, to whose musical memoirs we have such frequent occasions to recur.

"Select Ayres and Dialogues to sing to the Theorbo, Lute, or Basse-viol. Composed by Mr. Henry Lawes, late Servant to his Majesty in his public and private Music; and other excellent Masters. The second Book. London, printed for John Playford, 1669." The first part of these ayres and dialogues are chiefly reprinted from Henry Lawes's two first publications. The second part is by Dr. Wilson, Dr. Colman, Nicholas Lanieri, Simon Ives, Alphonso Marsh, William Gregory, Roger Hill, John Moss, John Goodgroome, Edward Colman the son of Dr. Colman,
Thomas

Thomas Blagrave, and the editor John Playford, with several additional songs by Henry Lawes. In the third part we have what are called "*Select Italian Ayres*, for one or two Voyces to the Theorbo-lute." If these airs are genuine they would prove Italy to be as deficient in melody as the English. One of these *ayres*, and not the worst of the collection, has Henry Lawes's name to it. After these, the book presents us with Dialogues by Henry Lawes, John Jenkins, William Lawes, and one by Simon Ives on the death of commissioner Whitlock's first wife, of which he has given an account in his manuscript Family Memoirs, mentioned above. This second book and Lawes's third book of Ayres and Dialogues are recommended by the editor to be bound together, as containing "the choicest songs that have been composed for forty years past."

"Choice Songs and Ayres for one Voice, to sing to the Theorbo-lute, or Basse-viol. Being most of the newest Songs sung at Court, and at the public Theatres, composed by several Gentlemen of his Majesties Musick." The first book, printed for Playford, 1673. The composers of this collection are Pelham Humphrey, Robert Smith, Alphonso Marsh sen. and jun. John Banister, Mr Stafford, Nicholas Staggin, Thomas Farmer, and Charles Forfall. Among these songs, to the number of near fifty, there is not one air that is either ingenious, graceful, chearful, or solemn. An insipid languor, or vulgar pertness, pervades the whole. From Pelham Humphrey, whose Church Music is so excellent, I own I expected to find originality, or merit of some kind or other; but his songs are quite on a level with the rest.

"The English Opera; or the vocal Musick in *Psyche*, with the instrumental therein intermix'd. To which is adjoyned the instrumental Musick in the *Tempest*, by Matthew Lock." Though these English operas, of which a farther account will be given, were performed in 1673, yet they were not printed and published till 1675.

Cantica sacra, ad duas et tres Voces composita, cum Basso continuo ad Organum. Authore Ricardo Deringo Regiæ Majestatis quondam Organistæ. Londini, 1662. These sacred songs are dedicated by

John

John Playford, the editor, to the Queen Dowager, Henrietta, relief of King Charles I.

Honest master Mace, in his *Musick's Monument*, already mentioned, speaking of the pieces that were in the highest favour at the Cambridge concerts before the *scoulding violins* were allowed to perform in them, says, "we had moreover a custom at our meetings " after the instrumental Musick was over, to conclude all with some " vocal piece to the organ, or, for want of that, to the theor- " boe. And the best we did ever esteem, were those things which " were most solemn and divine; some of which, for their eminency, I will name, viz. Mr. Deering's *Gloria Patri*, and other of " his *Latin songs*, now lately collected and printed by Mr. Playford, a very laudable, and thank-worthy work, besides many of " the like nature, wonderfully rare, sublime, and divine, beyond " expression."

It is sometimes fortunate for hyperbolical panegyrist of the Music of ancient times, when the particular pieces they celebrate cannot be found. If the productions and performance of Orpheus, Linus, Amphion, Terpander, or Timotheus, could now be realized and compared with those of Handel, Corelli, Leo, Pergolesi, or of many other musicians now living, would they be able to keep their ground, and fulfil our ideas of their excellence, founded on poetical exaggeration? Having found the *Gloria Patri* of Deering, with which Master Mace was so enrapt, the reader will see it on the next plate, p. 479.

"Catch that Catch can; or the musical Companion." This collection contains chiefly the same *Rounds* and *Catches* as Hilton published, in 1652, under the same title, with the addition of about seventy of these humorous and convivial productions, that appeared now for the first time; but the second part of this book, containing " *Dialogues, Gleees, Ayres, and Ballads*, of two, three, and " four Voyces," is wholly different from Hilton's second part, which consists of about forty *Hymns* and *Canons*. John Playford was the editor of this excellent collection. London, 1667.

In the second book, there are several short three-part songs by Capt. Henry Cook, master of the children of the chapel at the restoration of Charles II. which discover no great powers of learning or invention; we have others, however, of a superior kind; as "Turn Amarillis to thy Swain," a three-part glee, that was long in favour, by Thomas Brewer, a violist and composer of fancies in Charles the First's time; and several compositions by Matthew Lock, that are worth preserving, particularly the three-part glee (x), on the plate, p. 480.

"*Musick's Monument*; or, a Remembrance of the best practical Musick, both divine and civil, that has ever been known in the "World," 1676, folio, by Thomas Mace, one of the clerks of Trinity college, Cambridge, of quaint and singular memory; a work that must not be forgotten among the curiosities of this reign. It is impossible to describe the style of this original book by any choice or arrangement of words, but the author's own. The work is divided into three parts; the first treats of psalm-finging, and cathedral Music; the second, of the *noble lute*, "now made easie; and all its occult, lock'd-up-secrets plainly laid open; shewing a general way of procuring invention and playing voluntarily upon the lute, viol, or any other instrument, with two pretty devices, &c. In the third part the *generous viol*, in its *rightest use*, is treated upon; with some *curious observations*, never before handled, concerning it, and Musick in general."

In psalm-finging the author recommends *short-square-even and uniform ayres*, and is "bold to say that many of our old psalm tunes are so *excellently good* that art cannot mend them or make

(x) This being the first time the word GLEE occurs, as a musical term, it may be necessary to attempt its definition. A Glee implies nothing more in its original sense, in our printed music-books, than "a song of three or more parts, upon a gay or merry subject, in which all the voices begin and end together, finging the same words." When subjects of fugue or imitation occur, and the composition is more

artificial than simple counterpoint, it less resembles a Glee than a madrigal, which it might with more propriety be called, if the words are serious: for a *serious Glee* seems a solecism, and a direct contradiction in terms. The word *Glee*, in Saxon, German, and English Dictionaries, ancient and modern, implying *mirth*, *merriment*, and in old authors, *Musick* itself.

"them

“ them better.” In speaking of the difficulty of singing in tune, even with a good voice, he observes, that “ with an *unskilfull-inharmonious-course-grain’d-barsh-voice*, it is impossible. ’Tis *sad* to hear what *whining, toling, yelling, or screeking* there is in our *country congregations*, where if there be no organ to compel them to harmonical unity, the people seem *affrighted* or distracted.”

The liberal use of compounds by the ingenious Master Mace gives his language a very Grecian appearance. He doubts not but that there are “ many *rational-ingenuous-well-composed-willing-good-Christians*, who would gladly *serve God* aright, if possibly they knew but how ;” and therefore he advises the purchase of an organ of thirty, forty, fifty, or sixty pounds ; and then, “ the clark to learn to *pulse* or *strike* the psalm-tunes, which he offers himself to teach for thirty or forty shillings ; and the clark afterwards may instruct all the boys in the parish for a shilling or two a piece to perform the business as well as himself. And thus by *little and little*, the parish will *swarm* or abound with organists.”

The lute and viol are Master Mace’s favourite instruments, concerning the effects of which, and, indeed, of Music in general, he is a great rapturist. On the lute, though “ he had occasion to *break both his arms*, by reason of which he could not make the *nerve-shake well*, nor strong ; yet, by a certain *motion of his arm* he had gained such a *contentive-shake*, that his scholars asked him frequently how they should do to get the like ?”

I shall not attempt to recreate my readers with more extracts from this matchless, though not scarce, book ; but recommend its perusal to all who have taste for excessive simplicity, and quaintness, and can extract pleasure from the sincere and undissembled happiness of an author, who, with exalted notions of his subject and abilities, discloses to his reader every inward working of self-approbation in as undisguised a manner, as if he were communing with himself in all the plenitude of mental comfort and privacy. I shall, however, present such readers with an advertisement from Master Mace, that was written on his arrival in London, 1690, fourteen years after the publication of his book. I found it in the British Museum,

N^o 5936, in a collection of title-pages, devices, and advertisements.

AN ADVERTISEMENT.

“ To all Lovers of the best *Sort* of *Musick*.

“ Men say the times are strange——’tis true :

“ ’Cause many strange things hap to be.

“ Let it not then seem strange to you

“ That here one strange thing more you see.

“ That is, in Devereux-court, next the Grecian coffee-house, at
“ the Temple back-gate, there is a deaf person teacheth *Musick* to
“ perfection ; who, by reason of his great age, v. 77. is come to
“ town, with his whole stock of rich *musical furniture*, v. instru-
“ ments and books to put off, to whomsoever delights in such
“ choice things ; for he hath nothing light or vain, but all *substan-*
“ *tial*, and solid *MUSIC*. Some particulars do here follow :

“ 1. There is a late invented *ORGAN*, which (for private use)
“ excels all other fashioned organs whatever ; and for which, sub-
“ stantial-artificial *reasons* will be given ; and (for its beauty) it
“ may become a nobleman’s dining-room.

“ 2. There belongs to it a pair of fair, large-siz’d, *confort-viols*,
“ chiefly fitted and suited for *That*, or *confort* use ; and ’tis great
“ pity they should be parted.

“ 3. There is a *Pedal Harpsicon*, (the absolute best sort of *confort*
“ *harpsicons* that has been invented) ; there being in it more than
“ 20 *varieties*, most of them to come in with the foot of the player,
“ without the least hindrance of play (exceedingly pleasant). And

“ 4. Is a single *Harpsicon*.

“ 5. A new invented instrument, called a *Dyphone*, v. a *double*
“ *lute* ; it is both *theorbo* and *French-lute* compleat ; and as easy to
“ play upon, as any other lute.

“ 6. Several other *Theorbos*, *Lutes*, and *Viols*, very good.

“ 7. Great store of choice collections of the works of the *most*
“ *famous composers*, that have lived in these last 100 years, as *Latin*,
“ *English*, *Italian*, and some *French*.

“ 8. There is the *publisher’s* own *Musick’s Monument* ; some few
“ copies thereof he has still by him to put off ; it being a subscrib-
“ ed book, and not exposed to common sale. All these will be

“ fold

“fold at very easy rates, for the reasons aforesaid; and because (indeed) he cannot stay in town longer than 4 months (exactly.)

He farther adds, “if any be desirous to partake of his experimental skill in this *high-noble-art*, during his stay in town, he is ready to assist them; and (haply) they may obtain that from him, which they may not meet withal elsewhere. He teacheth these 5 things, v. the *theorbo*, the *French-lute*, and the *viol*, in all their excellent ways and uses; as also *composition*, together with the *knack* of procuring *invention* to young composers, (the general and greatest difficulty they meet withal) this last thing not being attempted by any author (as he knows of), yet may be done; though some has been so wise (or otherwise) to contradict it:

Sed experientia docuit.

“Any of these 5 things may be learned so understandingly, in this little time he stays (by such general rules as he gives, together with *Musick's Monument*, written principally to *such purposes*) as that any aptly inclined, may (for the future) teach themselves without any other help.”

H E N R Y P U R C E L L.

The fine arts depend so much on the protection and encouragement of the great, that they have never flourished in any country where its most illustrious inhabitants were indifferent to their charms. And the periods of our own history, in which Music has been the most favoured by royalty, are those alone that entitle us to any kind of share in the honour of its cultivation. Queen Elizabeth was herself a performer, and prevented Music from being wholly driven from our cathedrals by her injunctions. Charles I. felt and honoured the little good Music that subsisted during his turbulent and unhappy reign. And Charles II. by the influence of his smiles and attention, stimulated the natives of our island to make a considerable progress in the art, without the help of Italy or Germany. Indeed, the passion of this prince for French Music changed the national taste: happy for the art, when a sovereign's favour is founded on so firm a basis as the works of Handel! Indeed, our country

country would certainly now be less sensible of their worth, were it not for the royal countenance and patronage with which they have been long and steadily honoured.

King James II. was too gloomy and bigoted a prince to have leisure or inclination for cultivating or encouraging the liberal arts; nor, indeed, does he seem to have revolved any other idea in his mind, than the romantic or impracticable plan of converting his three kingdoms to the Catholic faith. And his subjects seem to have been in such a ferment during his short reign, that nothing, which deserves to be recorded, was achieved by any of them, except the wresting from him that power he abused. This remark is not made without recollecting that Newton published his *Principia*, and Locke finished his *Essay on Human Understanding*, while this prince sat on the throne; but it can never be imagined that during so short and turbulent a reign, two works which exalt human nature more perhaps than any which the longest reigns upon record ever produced, could have been brought to maturity. Indeed Purcell, who had so much distinguished himself in the former reign, does not appear by the date or occasion of his exertions, to have produced any particular anthem, ode, or drama, for the church, court, or stage, from the death of Charles II. his first royal master, till after the Revolution, except the anthem "Blessed are they that fear the Lord," which he composed by order of the court, in 1687, as a thanksgiving for the Queen's pregnancy.

During the reign of King William and Queen Mary, the different parties in politics were too much on the *qui vive*? too jealous and apprehensive of the machinations of each other, to bestow much meditation on the arts of peace. And both these sovereigns were personally too indifferent about Music to contribute to its refinement or corruption. Indeed, their reign was embellished by many of the most valuable of Purcell's productions, without his owing either his education or success to their immediate patronage. As the musical transactions, during the two reigns which closed the last century, can furnish the present history with few circumstances relative to the art, or its progress in this country, but what are de-

rived from his talents, it seems necessary, for a while, to quit the wide range of *general history*, and assume the more minute narrative of a biographer.

In tracing the progress of English Music through the reigns of James and Charles I. the Protectorship, and chief part of Charles II. but few secular compositions occurred which could be heartily praised. Indeed, with respect to the objects of my particular enquiries, they seem so much the periods of dulness and insipidity, that the power of charming, by the arrangement and combination of musical sounds, may be said to have slept, and artists to have played and sung with as little meaning and animation, as if the art had been carried on by *Somnambuli*. I therefore feel a particular pleasure in being arrived at that period of my labours which allows me to speak of HENRY PURCELL, who is as much the pride of an Englishman in Music, as Shakspeare in productions for the stage, Milton in epic poetry, Lock in metaphysics, or Sir Isaac Newton in philosophy and mathematics.

Unluckily for Purcell! he built his fame with such perishable materials, that his worth and works are daily diminishing, while the reputation of our poets and philosophers is increasing by the constant study and use of their productions. And so much is our great musician's celebrity already consigned to tradition, that it will soon be as difficult to find his songs, or, at least to *bear* them, as those of his predecessors, Orpheus and Amphion, with which Cerberus was lulled to sleep, or the city of Thebes constructed.

So changeable is taste in Music, and so transient the favour of any particular style, that its history is like that of a ploughed field: such a year it produced wheat, such a year barley, peas, or clover; and such a year lay fallow. But none of its productions remain, except, perhaps, a small part of last year's crop, and the corn or weeds that now cover its surface. Purcell, however, was such an excellent cultivator of his farm in Parnassus, that its crops will be long remembered, even after time has devoured them.

HENRY PURCELL was born in 1658. His father, Henry, and uncle, Thomas Purcell, were both musicians, and gentlemen of the Chapel

Chapel Royal, at the restoration of King Charles II (z). There is a three-part song in Playford's *Musical Companion*, by Henry Purcell, which, being printed in 1667, when our great musician was but nine years old, must have been the production of his father. There is likewise a chant in the first volume of Boyce's Collection, p. 289, N^o II. called the *burial chant*, by Thomas Purcell, his uncle, who continued in the service of the chapel till the time of his death, in 1682. Though these compositions promise no great hereditary genius, they shall be here inserted; as mankind is naturally curious concerning every thing that is connected with eminent persons.

Three-part Song by the Father of Henry Purcell. From Playford's Musical Companion, p. 153.

Mr. Hen. Purcell.

Sweet ty-ran-nels, I now re-sign my heart, for ever more 'tis thine;

Sweet ty-ran-nels, I now re-sign my heart, for ever more 'tis thine;

Sweet ty-ran-nels, I now re-sign my heart, for ever more 'tis thine;

those magick sweets force me, my art, myself to fla-ve-ry. What need I

those magick sweets force me, my art, myself to fla-ve-ry. What need I

those magick sweets force me, my art, myself to fla-ve-ry. What need I

(z) Ant. Wood, in his *Ashmole MS.* and cheque-book of the Chapel Royal.

care?

care? thy beauty flings such flow'-ry, smiling charms would conquer kings.

care? thy beauty flings such flow'-ry, smiling charms would conquer kings.

care? thy beauty flings such flow'-ry, smiling charms would conquer kings.

Chant, by Thomas Purcell.

From whom Henry received his first instructions in Music, cannot be very clearly ascertained. But his father dying in 1664, when he was no more than six years old, it is probable he was qualified for a chorister by Capt. Cook, who was master of the children from the Restoration till the time of his death, in 1672. For, as Purcell was appointed organist of Westminster Abbey at eighteen years of age, he must have learned the elements of his art before his fourteenth year, at which time Pelham Humphrey, brought up in the

Royal Chapel under Capt. Cook, was appointed his successor, as master of the boys. Purcell certainly continued to sing in the King's Chapel, and to receive lessons from Humphrey till his voice broke, an accident which usually happens to youth at sixteen or seventeen years of age: after this, perhaps, he had a few lessons in composition from Dr. Blow, which were sufficient to cancel all the instructions he had received from other masters, and to occasion the boast inscribed on the tomb-stone of Blow, that he had been

"Master to the famous Mr. Henry Purcell."

But there is nothing more common than this petit-larceny among musicians: if the first master has drudged eight or ten years with a pupil of genius, and it is thought necessary, in compliance with fashion or caprice, that he should receive a few lessons from a second, he instantly arrogates to himself the whole honour both of the talents and cultivation of his new scholar, and the first and chief instructor is left to sing, *sic vos non vobis*.

Purcell is said to have profited so much from his first lessons and close application, as to have composed, during the time of his being a singing boy in the chapel, many of his anthems which have been constantly sung in our cathedrals ever since. Eighteen was a very early age for his being appointed organist; that is, *maestro di capella* of Westminster Abbey, one of the first cathedrals in the kingdom, for choral compositions and performance. It was not likely he would stop here: the world is, perhaps, more partial to promising youth, than accomplished age; and at twenty-four, in 1682, he was advanced to one of the three places of organist of the Chapel Royal, on the death of Edward Low, the successor of Dr. Christopher Gibbons, in the same station.

After this, he produced so many admirable compositions for the church and chapel of which he was organist, and where he was sure of having them better performed than elsewhere, that his fame was soon extended to the remotest parts of the kingdom.

From this time, his anthems were eagerly procured, and heard with pious rapture wherever they could be performed; nor was he suffered long to devote himself totally to the service of the church. He

was, very early in his life, solicited to compose for the stage, and chamber, in both which undertakings, he was so superior to all his predecessors, that his compositions seemed to speak a new language; yet, however different from that to which the public had been long accustomed, it was universally understood (*a*). His songs seem to contain whatever the ear could then wish, or heart could feel. My father, who was nineteen years of age when Purcell died, remembered his person very well, and the effect his anthems had on himself and the public at the time that many of them were first heard; and used to say, that “no other vocal Music was listened to with pleasure, for near thirty years after Purcell’s death; when they gave way only to the favourite opera songs of Handel.”

The unlimited powers of this musician’s genius embraced every species of composition that was then known, with equal felicity. In writing for the *church*, whether he adhered to the elaborate and learned style of his great predecessors Tallis, Bird, and Gibbons, in which no instrument is employed but the organ, and the several parts are constantly moving in fugue, imitation, or plain counterpoint; or, giving way to feeling and imagination, adopted the new and more expressive style of which he was himself one of the principal inventors, accompanying the voice-parts with instruments, to enrich the harmony and enforce the melody and meaning of the words, he manifested equal abilities and resources. In compositions for the *theatre*, though the colouring and effects of an orchestra were then but little known, yet as he employed them more than his predecessors, and gave to the voice a melody more interesting and impassioned than, during the last century, had been heard in this country, or perhaps in Italy itself, he soon became the delight and darling of the nation. And in the several species of *chamber Music* which he attempted, whether sonatas for instruments, or odes, cantatas, songs, ballads, and catches, for the voice, he so far surpassed

(*a*) He produced the overture and act-tunes for *Abdelazar*, a tragedy written by Mrs. Behn, and acted at the Duke’s Theatre, in 1677, when he was only nineteen; to *Timon of Athens*, altered from Shakspeare

by Shadwell, in 1678; and to *Theodosius, or the Force of Love*, by Nat. Lee, in 1680; the songs and processional Music of which are still performed.

whatever our country had produced, or imported before, that all other musical productions seem to have been instantly consigned to contempt or oblivion.

As many of his numerous compositions for the church, particularly those printed in the second and third volumes of Dr. Boyce's Collection, are still retained in the King's Chapel and in our cathedrals, I shall here acquaint the musical reader in what manner I have been affected by some of these productions, in a late attentive perusal of them (*b*).

His four-part anthem, "O God, thou art my God (*c*)," must certainly have been one of his juvenile productions, before he had sufficiently refined his ear, or exercised his judgment; as there are many crude harmonies, and false accents in it, which in riper years he would not have tolerated (*d*).

Of his six-part anthem, "O God thou hast cast us out," the first movement, in which there are many bold harmonies, is extremely elaborate, yet spirited and pleasing. The verse, "O be thou our help," is not only full of new and fine effects, but touch-

(*b*) It appears by Dr. Bayley's *Collection of Anthems used in his Majesty's Chapel Royal*, that ten of Purcell's are still performed there; and in the Rev. Mr. Mason's *Copious Collection of the Words of such Anthems as are used in the Cathedral of York*, that near twenty of his choral compositions are still sung in that choir. I cannot help here recommending to the curious, as well as students in Church Music, the perusal of the Critical and Historical Essay on Church Music prefixed to Mr. Mason's useful publication; in which will be found many excellent reflexions on the subject, which that admirable poet has well considered; and though he seems inclined to reform our cathedral Music with less tenderness for many of our venerable old masters than myself, yet our opinions entirely coincide with respect to false accent, long divisions, and other inaccuracies and abuses in our choral Music, which require correction.

(*c*) Boyce's Collection, Vol. II. p. 148.

(*d*) In the first chorus, the word early begins on an unaccented part of the bar. Line iii, bar 3. the E b in the tenor part

with F and G, immediately preceding a close in F, has a very disagreeable effect. C would be better harmony; but then the point of imitation would not be so complete. The 6th with the 7th, in the next bar, is hardly defensible. P. 149, l. 3d, the 7th resolved by ascending, while the base descends a 3d, is a license worthy of imitation; as the effect is not unpleasant to the ear. In the next page he has the 6th with the 7th, and flat 3d, 4th, and 5th, again; which last combination, though he had authority from old masters, no composers, since his time, seem to have admitted into their works. P. 150, the sharp 5th to Eb must have been thought very licentious, during the last century; yet, as a note of taste, it has a good effect, and as such, is now frequently used. The harmony throughout the last movement, in triple time, is piquant, and the modulation agreeable, though the close in A is very extraneous. The *halleluja*, is in all respects, the use of the sharp 3d with the flat 6th excepted, extremely agreeable.

ing

ing (e). By those who object not to the confusion in the words which arises from fugue and imitation, while the several parts are singing different portions of the same sentence, at the same time, the words will appear perfectly well accented and expressed.

The first movement of his full anthem in eight parts, "O Lord God of hosts," is a noble composition, *alla Palestrina*, in which all the laws of fugue upon two, and sometimes more, subjects, are preserved inviolable; the harmony, though bold, is, in general, chaste, and the effect of the whole spirited and majestic. The second movement is extremely pathetic and expressive; but, both in that and the last movement, he seems trying experiments in harmony; and, in hazarding new combinations, he seems now and then to give the ear more pain than pleasure (f).

The two-part anthem, "Thy way, O God, is holy," continues to be excellent Music still, in the slow movements; the quick, however, are somewhat *passés*, and the melody to these words, "the air thundered," &c. seems too light and dramatic for the Church at any period.

The three-part anthem, "Be merciful unto me, O God," is throughout admirable. Indeed, to my conceptions, there seems no better Music existing, of the kind, than the opening of this anthem, in which the verse, "I will praise God," and the last movement, in C natural, are in melody, harmony, and modulation, truly *divine Music*.

(e) The unprepared 7th in the second and sixth bar was here, I believe, happily used for the first time. With the last movement I should be much more pleased if the sharp 3d and flat 6th did not so frequently occur.

(f) Purcell is so classical a composer for the Church, that his harmonical licences become authority, and may lead young students into error. It is right, therefore, to specify the places in these two last movements which are most likely to offend cultivated ears at present. In the last bar but one of p. 167, the Bb in the second soprano; p. 168, l. i. bar 3, the C sharp in the

first counter-tenor; ib. l. iii. bar 2, the 6th with the 7th to D sharp; and bar 6th the same line, the natural 3d, sharp 7th, and 9th, to D natural; and the sharp 3d with the natural 6th in the next bar; p. 170, the same combination occurs three several times, and to my ear seems jargon at all times and in all places: and, indeed, the 6th with the 7th, which we find twice more in the last movement, affect me always with the idea of wrong notes in the performance. These small blemishes excepted, this anthem is one of the finest compositions of the kind which our church, or perhaps any church, can boast.

The

The complete service of Purcell, in B flat, printed by Boyce (g), is a most agreeable and excellent piece of counterpoint, of which the modulation frequently stimulates attention by unexpected transitions, yet of so sober a kind as never to give the ear the least uneasiness, till we come to the bottom of p. 110, and then the same crudities of the sharp 3d with the flat 6th, and flat 3d, 4th, and 5th, as have been elsewhere censured, occur; which, I hope, in spite of my reverence for Purcell, the organists of our cathedrals scruple not to change for better harmony. These two or three combinations, like some words which his likeness Shakspeare tried unsuccessfully to render current, have been rejected by posterity; and it is in vain to attempt at forcing them upon the public by the mere weight of authority. The ear will patiently bear very rough usage from an artist who in general makes it such ample amends; however, there are limits, beyond which it is unsafe to exercise cruelty of all kinds; and the auricular sense will be deadened, disgusted, or rendered indifferent to Music's powers, by too harsh treatment.

The *Benedictus*, as well as *Te Deum*, and all the rest of the service, must be extremely pleasing, in all other respects, to every ear sensible to harmony. The words are, in general, accented with great accuracy (b); and the few points of imitation are fragments of agreeable melody. P. 121, the Ab and Ab $\sharp$, at the word *beseech*, in the *Kyrie*, are peculiarly beautiful, as are the 7th with the 9th at "before all worlds," in the creed, and the close at "by whom all things were made." The point at "throughout all generations," in the *Magnificat*, is what the Italians call *ben tirato*, well-worked. In the last line however, of page 132, so many exceptionable combinations occur, that I cannot pass it over without a stigma. Yet, upon the whole, the abilities of Purcell, as a profound contrapuntist, appear perhaps more in the course of this service than elsewhere; as he has manifested deep study and meditation in a species of writing to which it was not likely that his creative and impetuous

(g) Vol. III. p. 104.

(b) Yet why the word *highest* is contract-

ed into a monosyllable, to which only one note is allowed, is difficult to imagine.

genius

genius would submit, having had the patience, as well as abilities, to enrich it with no less than four different canons of the most difficult construction, as of 2, 3, and 4 in one, by inversion.

The superior genius of Purcell can be fairly estimated only by those who make themselves acquainted with the state of Music previous to the time in which he flourished; compared with which, his productions for the Church, if not more learned, will be found infinitely more varied and expressive; and his secular compositions appear to have descended from another more happy region, with which neither his predecessors nor contemporaries had any communication.

Besides the whole service, with three full, and six verse anthems, in Dr. Boyce's Collection, there are nine verse and full anthems, wholly different, still sung in the cathedral at York (*i*). And in Dr. Tudway's Collection, British Museum, there are, besides a whole service in B flat, different from that in Boyce, eight full and verse anthems, different from all the rest, four of which were composed for the Chapel Royal of Charles II. and are accompanied with instruments. And still, exclusive of these and the hymns printed in the two books of *Harmonia Sacra* (*k*), in a manuscript bequeathed to Christ-church College, Oxon. by Dr. Aldrich, there are two motets and a *Gloria Patri* for four and five voices, in Latin, with seven psalms and hymns for three and four voices, by our fertile and diligent composer, that have all their peculiar merit, but of which some may, without hyperbole, be said to reach the true sublime of sacred Music.

To enter on a minute examination of these would extend this article to too great a length; I shall, therefore, finish my account of his choral productions by a few remarks on his *Te Deum* and *Jubilate*.

Various have been the opinions concerning the occasion of this grand enterprize. Some have thought it was originally composed

(*i*) See Mason's Collection of those Portions of Scripture and the Liturgy that are sung as Anthems in the cathedral Churches of England, and published for the Use of

the Church of York, 1782.

(*k*) In the first book, published 1688, there are twelve; and in the second book, printed 1693, five of his hymns.

for the feast of the sons of the clergy; and Dr. Tudway, his contemporary and fellow-student, in the dedication to the sixth volume of his Collection of Church Music to lord Harley, 1720, tells us positively, that “the *Te Deum* and *Jubilate* of Mr. Henry Purcell, the first of that kind (meaning with instrumental accompaniments) that ever was made in England, was intended for the opening of the new church of St. Paul; and though he did not live to see it finished, it was afterwards performed three several times when Queen Anne went thither herself, in ceremony.” But both these accounts are certainly erroneous, as is evident by the following title to a printed copy, which I have examined, in the library of Christchurch, Oxon. “*Te Deum* and *Jubilate*, for voices and instruments, made for St. Cecilia’s day, 1694, by Henry Purcell.”

The custom, since the death of Purcell, of opening this magnificent hymn with an overture or symphony, which Handel and Graun have done so powerfully, renders the beginning of our countryman’s composition somewhat abrupt, meagre, and inferior in dignity to the subject; there is, however, a stroke of genius, boldness, and effect, in the four last bars of the first line, where the discords are struck by the trumpets, and resolved by the violins, which marks the great musician.

There is likewise a grandeur in the movement, and richness in the harmony of the chorus *All, all the earth doth worship thee*, and the distribution of the parts, in ascending after each other by the harmonic intervals of the perfect chord, has a beautiful effect. But it seems to me as if *all* the composers of this hymn had mistaken the cry of *joy* for that of *sorrow*, in setting *To thee all angels cry aloud*. Here Purcell, as well as Handel, has changed his key from major to minor, and in admirable modulation in itself, has given the movement a pathetic expression, which in reading and considering the idea of that eternal laud and praise which the hierarchies and heavenly hosts offer up to the throne of God, it seems not to require.

The Cherubin and Seraphin singing in duo, and the universal acclaim of *holy*, are certainly most happily designed, and expressed with the energy of inspiration. The transient state of melody has, however,

ever, rendered this verse "The glorious company of the apostles
"praise thee," and, indeed, most of the solo parts, somewhat rude
and inelegant. And it is chiefly in the choruses and disposition of
the whole work, that Purcell is still admirable, and will continue
so among Englishmen, as long as the present language of this hymn
shall remain intelligible.

"Also the Holy Ghost the comforter," is a delightful fragment
of harmony and melody, which time can never injure: and "Thou
"art the King of glory," in double fugue, is grand and masterly.
"When thou tookest upon thee," and "When thou hadst over-
"come the sharpness of death," have permanent beauties of melo-
dy, contrivance, and expression, that are wholly out of the reach of
fashion. This praise, however, does not include the division upon
the word *all*. Through the numberless mistakes of a bad copy (1),
very great beauties are manifest, in looking over the score from
"Thou sittest at the right hand of God," to "ever world without
"end." I shall only instance the division on the word *glory*; in-
deed, the whole movement of "O Lord save thy people," in which
the sound is truly an echo to the sense; and, in the expression of
the words, "Lift them up for ever," is admirable.

The whole verse, "Vouchsafe, O Lord, to keep us this day
"without sin," to "as our trust is in thee," is so incorrectly print-
ed, that it is hardly possible to know the author's design, with re-
spect to harmony; however, much expression is discoverable in the
voice part, and the supplication at the words "have mercy upon
"us," is truly pathetic. The short fugue "let me never be con-

(1) No composition of merit was ever
worse engraved than this *Te Deum*: wrong
notes, wrong clefs, confusion and blunders
of all kinds, disgrace every plate from the
beginning to the end, which, without skill
in composition, a reader would often ascribe
to the author of the work. The errors are so
numerous, that to point them out would take
up too much room here: I think, I have
heard that the late Dr. William Hayes, of
Oxford, has revised and made some additions
to the accompaniments of this composition,
which, for the honour of our country, it

were to be wished might be soon engraved
in the same handsome and correct manner,
in which part of our author's works have al-
ready been published by Mr. Goodison. Whe-
ther it was to display the abilities of Elford,
the celebrated counter-tenor, that Purcell
has composed the chief solo verses for that
species of voice, I know not; but it is a
misfortune to this admirable production,
that good counter-tenor voices are very
scarce, and good fingers, in that part of the
scale, infinitely more so.

"founded," though regular, might have been written by a man of less genius than Purcell.

The beginning of the *Jubilate* is well calculated to display a fine performer, and, therefore, the military cast which is given to the whole air, by the pointed notes, may be proper; but I must own, that I never was partial to that style of movement; yet Purcell and all his cotemporaries in England were so much of a different opinion, that it prevails too much in all their works.

"Be ye sure that the Lord," &c. if sung with taste and feeling, will always be good Music, and so will the next movement, as long as the art of Music shall be had in reverence.

In the verse, "for the Lord is gracious," Purcell has displayed his uncommon powers of expression, particularly at "his mercy is everlasting," which seems to me exquisite composition. The *Gloria Patri, alla Palestrina*, but more animated, perhaps, than any movement that Palestrina was ever allowed to compose, is full of such science and contrivance, as musicians can alone properly estimate; but the general effect of the whole is so glorious and sublime, as must charm into rapture the most ignorant, as well as the most learned hearer (*m*).

This admirable composition was constantly performed at St. Paul's Church on the feast of the sons of the clergy, from the decease of the author, 1695, till the year 1713, when Handel's *Te Deum* for the peace of Utrecht, was produced by order of Queen Anne. From this period till 1743, when his second *Te Deum*, for the battle of Dettingen, was composed, they seem to have been alternately performed. But since that time, Purcell's composition has been but seldom executed, even at the triennial meetings of the three choirs of Hereford, Worcester, and Gloucester. Handel's superior knowledge and use of instruments, and more polished me-

(*m*) The review of this work has not been undertaken with the least spirit of comparison, in order to exalt our great countryman at the expence of our great foreigner. Some years have passed since these remarks were made, and I purposely avoid-

ed looking critically at Handel's *Te Deum*, till the time came, not only for a careful and candid examination of that production, but of such of the other works of that truly great musician, as were performed at his *Commemoration*, in 1784.

body.

lody, and, indeed, the novelty of his productions, which, *cæteris paribus*, will always turn the public scale, took such full possession of the nation's favour, that Purcell's *Te Deum* is only now performed occasionally, as an antique curiosity, even in the country.

Our author's *theatrical compositions*, if we recollect the number and excellence of his productions for the Church, and the shortness of his life, will surprise by their multiplicity. Of those dramas which are called operas, and of which Music was the principal allurements held out to the public, a more detailed account will be given in speaking of the origin and progress of the musical drama in England, previous to the use of the Italian language, Music, and performers, on our lyric stage. And of his detached and incidental songs, dialogues, and scenes, that were performed at our national theatre or playhouse, the principal will be mentioned in speaking of his *Orpheus Britannicus*, or Posthumous Collection of his miscellaneous Compositions. But before we enter on an examination of this work, it seems necessary to acquaint the reader, that the chief part of his instrumental Music for the playhouse is included in a publication that appeared two years after his decease, under the title of "A Collection of Ayres composed for the Theatre and on other Occasions, by the late Mr. Henry Purcell. London, printed for Frances Purcell, Executrix of the Author, 1697 (n)."

Purcell seems to have composed introductory and *entracte* Music to most of the plays that were brought on the stage during his time. This publication contains his Music to the following dramas:

Abelazor, 1677. The Music of this consists of an overture and eight airs or tunes.

The Virtuous Wife, 1680. Overture and seven airs.

(n) These airs are in four parts, for two violins, tenor, and base, and were played as overtures and act-tunes in my own memory, till they were superseded by Handel's hautbois concertos, and those, by his overtures, while Boyce's sonatas, and Arne's compositions, served as act-tunes. In process of time these were supplanted by Martini's concertos and sonatas, which were thrown aside for the symphonies of Van

Maldere, and sonatas of the elder Stamitz. About this time, the trios of Campioni, Zannetti, and Abel, came into play, and then the symphonies of Stamitz, Canabich, Holtzbauer, and other Germans, with those of Bach, Abel, and Giardini; which, having done their duty many years very pleasantly "slept with their fathers;" and at present give way to Vanhall, Boccherini, Haydn and Pleyel. *Sic transit gloria Musicorum!*

Indian Queen. The first movement of this overture is equal to any of Handel's. There are likewise two or three trumpet tunes, well calculated for the instrument, and a rondeau at the end, which would now seem new, if played in a concert by a good band.

Dioclesian, or the Prophetess, 1690. The instrumental Music of this English opera given here, consists of an overture of two movements, the first excellent in the style of Lulli, and afterwards of Handel with better fugues; *preludio*, accompaniment to a song, trumpet-tune, ayre, hornpipe, country-dance, and *canaries* (o).

King Arthur, 1691. Overture and twelve tunes.

Amphitruon, 1691. Overture and eight tunes.

Gordian Knot untied, 1691. Overture and seven tunes.

Distressed Innocence, or the Princess of Persia, 1691. Overture and seven tunes, all proofs of the author's original genius.

The Fairy Queen, 1692. Two overtures and sixteen tunes of different kinds. N^o 12, an air, 4 in 2, is a very curious canon on two subjects: the first treble and base performing one, and the second and tenor the other. There is as much accent and spirit in this composition, as if it were in free counterpoint.

The Old Bachelor, 1693. Overture and eight tunes.

The married Beau, 1694. Overture and eight tunes, among which is a very agreeable air for the trumpet, a march, and a hornpipe, that are characteristic. This last is very much in the style of a Spanish *Fandango*.

The Double Dealer, 1694. Overture and ten tunes. N^o 6 and 9 pretty and curious.

Bonduca, 1695. Overture and eight tunes, including *Britons strike home*; and *To arms*, in four parts.

These are the contents of this posthumous publication; but besides the Music for these dramas, he composed overtures, act-tunes, and songs, for *Timon of Athens*, 1678; for *Theodosius, or the Force of Love*, 1680; for *Dryden's Tempest*, 1690; and for *Don Quixote*, 1694.

(o) A French term for a rapid dance, in jig time.

But few of Purcell's single songs seem to have been printed during his life. He published the Music to a masque sung in the tragedy of *Oedipus*, when it was revived in 1692. And "a musical Entertainment, performed Nov. 22d, 1683, on St. Cecilia's day, printed in score by John Playford, with a dedication to the gentlemen of the musical society, and particularly the stewards, written by Henry Purcell, composer of the Music."

There are several of his songs in Playford's Collection called "the Theatre of Music, 1687, fourth and last Book;" and though these are not in his best manner, they are more original and interesting than the rest. Among these, p. 50, *A new song to a Scotch tune*, by our author, seems to me more pleasing and less stolen, than any spurious *Scotch tune*, or imitation of the national melody of the northern inhabitants of this island, that has been since produced.

Page 62 of the same collection, there is an admirable piece of recitative, in a truly grand style: "Amidst the shades," &c. But the collection of his secular vocal Music, which did him the greatest honour, and long rendered his name dear to the British nation, was published by his widow two years after his decease, by the title of *ORPHEUS BRITANNICUS*. Here were treasured up the songs from which the natives of this island received their first great delight and impression from the vocal Music of a *single voice*. Before that period we had cultivated madrigals and songs in parts, with diligence and success; but in all single songs, till those of Purcell appeared, the chief effects were produced from the words, not the melody. For the airs, till that time, were as unformed and misshapen, as if they had been made of notes scattered about by chance, instead of being cast in an elegant mould. Exclusive admirers of modern symmetry and elegance may call Purcell's taste barbarous; yet in spite of superior cultivation and refinement, in spite of all the vicissitudes of fashion, through all his rudeness and barbarism, original genius, feeling, and passion, are, and ever will be, discoverable in his works, by candid and competent judges of the art.

To this admirable collection are prefixed seven copies of verses to his memory, at the head of which is an ode, written on his death,

by

by Dryden, which was set by Dr. Blow, and performed at the concert in York Buildings. The Music of this ode was printed 1696, the year after our favourite musician's decease. It is composed in fugue and imitation, and is learned and masterly, but appears laboured, and is wholly without invention or pathos. There is, however, so much of both in the poetry, that it borders on bombast.

Ode on the Death of Mr. HENRY PURCELL.

Written by Mr. Dryden.

Mark how the lark and linnet sing,
With rival notes
They strain their warbling throats,
To welcome in the spring.
But in the close of night
When Philomel begins her heav'nly lay,
They cease their mutual spight,
Drink in her Music with delight,
And list'ning and silent, and silent and list'ning,
And list'ning and silent obey.

So ceas'd the rival crew when Purcell came,
They sung no more, or only sung his fame.
Struck dumb they all admir'd the godlike man:

The godlike man
Alas! too soon retir'd
As he too late began.

We beg not hell our Orpheus to restore:

Had he been there,

Their sovereign's fear

Had sent him back before.

The pow'r of harmony too well they knew

Would long ere this have tun'd their jarring sphere,

And left no hell below.

The heav'nly choir, who heard his notes from high,

Let down the scale of Music from the sky:

They handed him along,

And all the way he taught, and all the way they sung.

Ye brethren of the lyre, and tuneful voice,

Lament his lot, but at your own rejoice.

Now live secure and linger out your days,

The gods are pleas'd alone with Purcell's lays,

Nor know to mend their choice.

The great poet had a very particular attachment to our admirable musician, which was not wholly generated by genius and success in setting so many of his poems, but, in part, from having been the master of his lady, the Right Hon. lady Elizabeth Howard, daughter of the earl of Berkshire, to whom Mrs. Purcell dedicated this posthumous publication. In this dedication it is said by his widow, that her ladyship had generously prevented her intended performance of the duty she owed his ashes, by erecting a fair monument over him, and gracing it with an inscription which may perpetuate both the marble and his memory (p).

There are few songs in the *Orpheus Britannicus* but what contain some characteristic mark of the author's great and original genius. The melody, however, will at first seem to many at present uncouth and antiquated; but by a little allowance and examination, any one possessed of a great love for Music, and a knowledge of our language, will feel, at certain places of almost every song, his superior felicity and passion in expressing the poet's sentiments which he had to translate into melody.

The favourite songs with Purcell's admirers, during my youth, were the following; and upon a late attentive perusal of the book, they seem to have merited particular distinction. "Celia has a thousand charms;" the first movement of this, like many of Purcell's songs, seems only *recitative* graced, or embellished with

(p) The following is the inscription, which, from the passage just cited from the dedication, has, not improbably, been supposed the composition of Dryden:

Here lies

HENRY PURCELL, Esq.

Who left this life,

And is gone to that blessed place,

Where only his harmony
can be exceeded.

Obiit 21mo. die Novembris,

Anno ætatis sue 37mo.

Annoq; Domini 1695.

On the stone over his grave was the following epitaph, which is now wholly effaced:

*Plaud' te, felices superi, tanto hospite: nostris
Præfuerat, vestris additur ille choris:*

Invida nec vobis Purcellum terra reposcat,

Quæstâ decus sæcli, deliciasque breves.

Tam cito decussisse, modos cui singula debet

Musa, prophana suos religiosa suos.

Vivit lo et vivat, dum vicina organa spirant,

Dumque colet numeris turba canora Deum.

Anonymous translation.

Applaud so great a guest, celestial pow'rs,
Who now resides with you, but once was
ours;

Yet let invidious earth no more reclaim
Her short-liv'd fav'rite and her chiefest fame;
Complaining that so prematurely died
Good nature's pleasure and devotion's pride.
Died! no he lives while yonder organs
sound,

And sacred echos to the choir rebound.

the

the fashionable *volate*, or *flourishes* of the times, which are now as antiquated as the curls of his own peruke, or the furbelows and flounces of Queen Elizabeth. The second movement, however, of this song, is plaintive and graceful; and at "I should my wretched, wretched, fate deplore," is still new and pathetic.

"You twice ten hundred deities," opens with what seems to me the best piece of recitative in our language. The words are admirably expressed throughout this song, by modulation as well as melody. And there is a propriety in the changes of movement, which does honour to Purcell's judgment, as much as the whole composition to his genius. The change of style and sluggish motion given to the notes at these words: "from thy sleeping mansion rise," is a model of musical imitation and expression. The modulation is still so excellent, that the best modern masters are obliged to adopt it on almost all great occasions (*q*).

Of the Music in King Arthur I shall say but little, as it has been lately revived, well performed, and printed. If ever it could with truth be said of a composer, that he had *devancé son siècle*, Purcell is entitled to that praise; as there are movements in many of his works which a century has not injured, particularly the duet in King Arthur, "Two daughters of this aged stream," and "Fair-est isles all isles excelling (*r*)," which contain not a single passage that the best composers of the present times, if it presented itself to their imagination, would reject. The dialogue in the *Prophetess*, "Tell me why, my charming fair," is the most pleasing and ingenious of all the compositions of the kind which the rage of fashion produced during fifty years. The first part of "O lead me to some peaceful gloom," is truly elegant and pathetic.

"From rosie bow'rs," is said to have been "set in his last sickness," at which time he seems to have realised the poetical fable of the swan, and to have sung more sweetly as he approached nearer

(*q*) There are three capital mistakes in the old printed copy of this excellent composition, which I shall beg leave to correct: 1st. p. 26, line last, bar i. the second note should be C instead of D. 2d. P. 27, l. iii. A in the base should be flat, in the 3d bar.

3d. Line iii. of the same page, bar 3d, the F in the voice part should be sharp.

(*r*) This is one of the few airs that time has not the power to injure. It is of all ages and countries.

his

his dissolution; for it seems to me as if no one of his productions was so elevated, so pleasing, so expressive, and throughout so perfect, as this. The variety of movement, the artful, yet touching modulation, and, above all, the exquisite expression of the words, render it one of the most affecting compositions extant to every Englishman who regards Music not merely as an agreeable arrangement and combination of sounds, but as the vehicle of sentiment, and voice of passion.

There is more elegant melody, more elaborate harmony, more ingenious contrivance, in the motion and contexture of the several parts in the works of many great composers; but to the natives of England, who know the full power of our language, and feel the force, spirit, and shades of meaning, which every word bears according to its place in a sentence, and the situation of the speaker, or singer, I must again repeat it, this composition will have charms and effects, which, perhaps, Purcell's Music only can produce.

"When Mira sings," is a duet that will ever be captivating, as long as the words remain intelligible; of which he has augmented the force, particularly at the end, by notes the most select and expressive that the musical scale can furnish.

"Lost is my quiet," another duet, which still lives. And "Celebrate this festival," a birth-day song for Queen Mary, which is graceful and pleasing through all its old-fashioned thoughts and embellishments. "I'll sail upon the dog-star," has all the fire of Handel's prime.

Mad Bess, is a song so celebrated, that it needs no panegyric, or renewal of public attention, as every captivating English singer, in my memory, has revived its favour (s).

"'Tis nature's voice," is an enigmatical song, seemingly on Music; in which Purcell has crowded all the fashionable passages of

(s) Mrs. Sheridan and Mrs. Bates never give more exquisite delight by their admirable performance, than when they regale their friends with this song. Mr. Beard, thirty years ago, used to gain great applause by singing *Rosy Bow'rs*, and *Frañ*, by her

performance of *Mad Bess*, in the concerts at Hickford's Room, the Castle, and King's Arms; where Mr. Stanley was justly admired for his ingenious and masterly manner of accompanying them.

taste and vocal difficulty of the times. Indeed, he seems to have anticipated many fantastical feats of execution and articulation in which great performers have since rioted; and this is the more wonderful, as the Italian opera was not established, or even attempted here, during the life of Purcell; whose decease preceded the arrival of Valentini and Nicolini, the first great singers imported from Italy, at least ten years.

"Blow, Boreas, blow," was in great favour, during my youth, among the early admirers of Purcell; but this seems now more superannuated than any of his popular songs.

"Let Cæsar and Urania live," was a duet in a birth-day ode, during the reign of King William and Queen Mary, which continued so long in favour, not only while those sovereigns jointly wielded the sceptre, but even when George II. had lost his royal consort, and there ceased to be a Queen, or Urania, for whom to offer up prayers, that Dr. Green, and afterwards Dr. Boyce, used frequently to introduce it into their own and the laureate's new odes. This duet, like many other productions of Purcell, was built on a *ground-base* of only two bars, which are invariably repeated to different passages of the voice-parts that are in harmony with it, throughout the movement. The latter part of this duet is extremely beautiful, and does not seem at all to have suffered from the voluntary restraint under which the composer laboured.

The composing songs on a *ground-base*, was an exercise of ingenuity, in which Purcell seems to have much delighted; but though it was as much a fashion in his time, as the composing masses on the subjects of old tunes in the days of Jusquin, and variations upon those tunes in the days of Bird and Dr. Bull, in which they all manifested superior abilities, yet the practice was Gothic, and an unworthy employment for men possessed of such genius and original resources (†).

Judges of musical design, modulation, and expression, will meet

(†) The Italians started this, as well as most other musical fashions; for it appears by the works of Tranquino Merula, published 1635, that writing upon a *ground-base*

was a favourite occupation with that capricious composer, as well as our ingenious countryman.

with

with many places to admire in songs that have never been popular, yet have local beauties, and mark the superior powers of the composer; particularly in the "Sighs for the death of King Charles II." In the "Dialogue in Tyrannic Love," p. 158, there is a passage upon which the late Mr. Bach has constructed a favourite movement in one of his *Quartetti concertanti*.

"I attempt from love's sickness," is an elegant little ballad, which, though it has been many years dead, would soon be recalled into existence and fashion, by the voice of some favourite singer, who should think it worth animation.

"Let the dreadful engines:" this is the last song in the first volume of the *Orpheus Britannicus*, of which though both the words and Music of the first movement are wild and bombast, yet the second and last discover a genius for the graceful comic, as well as the tender and sublime style of composition; and there are several passages in this cantata sufficiently gay and new, for a modern *Burletta*.

In 1702, a second, and more correct, edition, of the first volume of this work was published, with more than thirty songs that were not in the first impression; but, in order to make room for which, some of the former were omitted (*u*). The same year was likewise

(*u*) The additional songs have been said to be "communicated by the Rev. George Luellyn, who had been a page of the "back stairs, in the reign of Charles II. "and at court became acquainted with Purcell. He afterwards entered into holy orders, and had a living near Shrewsbury." To this information I am able to add, from my own knowledge, that the name of this gentleman's rectory, to which he retired after living much in the great and gay world, was *Condover*, a village within four miles of Shrewsbury, where I was nursed and spent the first twelve or thirteen years of my life; during which time Mr. Luellyn constantly resided there. This gentleman, who was a lively Welshman, and a man of wit and taste in the arts, was so much attached to the Stuart family, so fond of Music, and so active in all his pursuits, that he was often called by the Whigs, "a Jacobitical, musical, mad, Welsh parson." In the year 1715, his parsonage house was

known to have been an asylum to his attainted friends. He was in long and close intimacy with the sometimes Shropshire member, Corbet Kynaston, Esq. then at the head of the Tory faction. His house was fitted up with great taste, and had many good pictures in it. But he seems to have spent more of his time in horticulture than in any other amusement; yet in this, notwithstanding his antipathy to King William, his taste was so peculiarly *Dutch*, that he cherished "the mournful family of *Tewes*" to a risible degree: having at each angle of his parterre, trees of that species cut into the shape of almost every bird and beast that had been preserved in Noah's ark; with Satan, the prince of the devils, in the centre, for which it was said by the country people he had been offered a £. 1000; and in a flower-bed, just under his parlour window, King David playing on the harp, was cut in box-wood.

published a second volume of *Orpheus Britannicus*, by Henry Playford, which he has dedicated to the earl of Halifax.

To this volume among encomiastic verses, addressed to the editor, there is an animated poem of a considerable length, signed R. G. "On the death of the late famous Mr. Henry Purcell," from which we are enabled to gather something of this sweet composer's character, as a man, as well as musician.

On the Death of the late Mr. HENRY PURCELL, Author of the first and second Books of *Orpheus Britannicus*.

Make room ye happy natives of the sky,
Room for a soul, all love and harmony;
A soul that rose to such perfection here,
It scarce will be advanc'd by being there.

Whether, to us by transmigration given,
He once was an inhabitant of heaven,
And form'd for Music with diviner fire
Endu'd, compos'd for the celestial choir;
Not for the vulgar race of light to hear,
But on high-days to glad th' immortal ear.
So in some leisure hour was sent away,
(Their hour is here a life, a thousand years their day.)
Sent what the ethereal Music was to show
And teach the wonders of that art below.——

——Languid and low, as modern rhyme appears,
When Virgil's matchless strain has tun'd our ears;
So seem to him the masters of our isle,
His inspiration, theirs but mortal toil.
They to the ear, he to the soul can dive,
From anger save, and from despair revive.——

——Whene'er his harmony arrests the ear,
We lose all thought of what, or how, or where!
Like love it warms, like beauty can controul,
And while we hear, the body turns to soul!——
——From what blest spring did he derive his art
To soothe our cares, and thus command the heart!
How did the seeds lie quick'ning in his brain,
How were they born without a parent's pain?
He did but think, and Music would arise,
Dilating joy, as light o'er spreads the skies;

From

From an immortal source, like that it came ;

But light we know, — this wonder wants a name !

What art thou ? from what causes dost thou spring,

O Music ! thou divine mysterious thing ?

Art thou the warmth in spring which zephyr breathes,

Painting the meads, and whistling through the leaves ?

The happy season, that each care beguiles,

When God is pleas'd, and all creation smiles ?

Or art thou love, that mind to mind imparts

The endless concord of agreeing hearts ?

Or art thou friendship, yet a nobler flame,

That can a purer way make souls the same ? —

The author, after some more fantastical and lofty verses in praise of Purcell as an artist, has the following spirited and feeling lines on his private virtues.

Ah most unworthy ! should we leave unsung

Such wond'rous goodness in a life so young :

In spite of practice, he this truth has shown,

That harmony and virtue should be one.

So true to nature and so just to wit,

His Music was the sense each poet writ.

— Nor were his beauties to his art confin'd,

His form appear'd the product of his mind.

A conqu'ring sweetness in his visage dwelt,

His eyes would warm, his wit like light'ning melt.

Pride was the sole aversion of his eye,

Himself as humble as his art was high.

Ah ! let him heav'n, in life so much ador'd,

Be now as universally deplor'd. —

Calm rest thy ashes—but thy nobler name

Shall soar aloft, and last as long as fame. —

The sacred art could here arrive no higher,

And heav'n itself no further will inspire.

The song of this second volume, p. 4. beginning, "Ah ! cruel nymph," has great ingenuity in the first movement, and grace in the second. And the next air, "Crown the altar," seems the most pleasing of any that he has composed on a *ground-base*. "May the god of wit inspire," for three voices, is natural and pleasing, and the *echoes* in the second part, are very ingeniously contrived.

"Thus

"Thus the gloomy world," accompanied with a trumpet, and violin alternately, is masterly, and well designed to display the truest and most brilliant tones of the trumpet, though but little is given to the violin, which so much better deserves employment, than an instrument of such false intonation as the trumpet.

Those that can relish good Music of every age and country, and have no exclusive partiality to individuals of either, will find amusement in the performance or perusal of Purcell's *Four Seasons*, in the *Fairy Queen*, which comprehend merit of various kinds.

"To arms, to arms," is an admirable military song, accompanied by a trumpet, which is so confined an instrument, that nearly the same passages must be used in all ages, so that time has robbed this song of but little of its novelty. Indeed, the divisions of this air have been revived of late years, and are now as fashionable, in frivolous and unmeaning melody, as ever.

There are many songs in this volume, which manifest great musical abilities in writing upon a ground-bass, as well as in the happy invention of such basses for this purpose as are not only agreeable to hear often repeated, but fertile in furnishing a variety of pleasing passages; however, these and their peculiar beauties I must pass over, or my commentary will encroach too much on the limits of my work, as well as on the patience of those readers to whom the name and productions of our British Orpheus, or rather our musical Shakspeare, are alike indifferent. I must, however, observe that there is a composition in Purcell's *Bonduca*, in which he has anticipated a species of dramatic Music, which has been thought of late invention; the words are "Hear ye gods of Britain!" which he has set in an *accompanied recitative*, *à tempo*, or *aria parlante*. The beginning, however, with the bass *à pedale*, has the true characteristic of *recitative*. Afterwards, when the bass is put in motion, the whole has the properties of an air, ingeniously and spiritedly accompanied by two violins and a bass. Besides the true dramatic cast of this composition, there are new harmonies hazarded, which I do not recollect having seen in anterior contrapuntists, at least of our own country. Bar the 5th, we have a 2d, 4th, flat 6th, and sharp 7th,

7th, which, prepared by a 4th with a 6th and melted into a common chord, have a very fine effect. Indeed, there are so many beauties of various kinds in this short scene, that I should not resist the desire of exhibiting it here, that it might speak its own worth to my musical readers, had not the public been promised a complete edition of Purcell's works.

Another ingenious, but *comic* idea, that seems to mark Purcell's resources, in whatever he wished to express by picturesque Music, is the military cast he has given to the base of the song, beginning, "The pale and the purple rose," which, though the air itself is no more than a common languid minuet, reminds us perpetually of the drums, skirmishes, and battles of the contending houses of York and Lancaster.

The song on St. Cecilia's day, 1692, has several passages of which Handel frequently made use, many years after, in his Allegro and Penseroso, and elsewhere.

"Genius of England," was long the favourite song of our theatres, though its passages are more common and vulgar now, than those of any other of Purcell's capital songs. It, however, furnishes us with examples of execution and national taste at the time when it was first sung in Dufey's *Don Quixote*, 1694, by Freeman, and the wife of Colley Cibber, accompanied by John Shore, her brother, a famous performer on the trumpet (x).

It is said that Queen Mary having expressed herself warmly in favour of the old Scots tune of "Cold and raw the wind doth

(x) Matthias Shore, the father of John, and of this Mrs. Cibber, was serjeant-trumpet, in which office he was succeeded, first by his brother William Shore, and, afterwards, by his son John. His daughter, Mrs. Cibber, had been a scholar of Purcell in singing and playing on the harpsichord; in the exercise of which talents at home, her conquest over the heart of Colley Cibber first began. Purcell, from his connexion with the family, and his admiration of John's performance on the trumpet, took every opportunity in his power to employ him in

the accompaniment of his songs and other theatric compositions; and this accounts for the frequent use he made of that martial and field instrument, even when the subject of the poetry was pacific. John Shore lived till the year 1753, when he was succeeded, as serjeant-trumpet, by that admirable performer the late Mr. Valentine Snow, whose exquisite tone and fine shake must be still remembered by many persons living, who have heard him at Vauxhall, and in Mr. Handel's oratorios.

"blow,"

“blow,” Purcell made it a perpetual base to an air in the next birthday ode, 1692; beginning “May her blest example chase:” (see p. 151.) a piece of pleasantry which is likewise said to have been occasioned by her majesty’s asking for this tune after Mr. Gostling, one of the gentlemen of the Chapel Royal, and the celebrated Mrs. Arabella Hunt, with Purcell to accompany them on the harpsichord, had exerted all their talents and abilities to amuse so great a personage with compositions which they mistakenly thought of a superior class.

I cannot quit the second volume of the *Orpheus Britannicus*, before I have recommended to the notice of Purcell’s admirers, and, indeed, the admirers of English Music in general, his duet, “I spy Celia,” p. 166; of which the pleasing melody and harmony, the ingenious design, and variety of movement, will afford them considerable entertainment.

Bonduca, of which he set the songs the last year of his life, 1695, and “the Prophets, or the History of Dioclesian,” which he set entirely, after it was formed into an opera by Dryden, were both originally written by Beaumont and Fletcher. Purcell’s Music to this last was performed at the Queen’s theatre, 1690, and published by himself in score, folio, 1691.

Being in possession of a complete copy of this work, which now lies before me, I cannot refrain from adding a few words on the subject, though some of the Music is printed in the *Orpheus Britannicus*, and has been already mentioned in the account of that posthumous publication.

The first song in the second act of this opera, which is for a base voice, and terminated by a chorus, has great merit in the richness of the harmony, and ingenuity of the accompaniment.

Page 66, the ballad air, to “What shall I do to show how much I love her?” after it had done its duty to these words upwards of thirty years, became the favourite tune in the *Beggar’s Opera*, from its first performance, in 1727, to the present time, where it is sung to “Virgins are like the fair flower,” Gay’s imitation of.

"Sound fame thy brazen trumpet," was an excellent air, when composed, for the display of a fine counter-tenor voice, and his friend Shore's trumpet.

The dialogue "Tell me why, my charming fair," already mentioned, was justly admired as pleasing and fashionable Music so late as the year 1740; when it was performed at a public concert, at Chester, by the author of this history, a school-boy not fourteen, and a very indifferent tenor; neither of whom was able to render the audience partial to the composition by their abilities in singing it.

The trio "Triumph victorious love," on a *ground-base*, preceding the last chorus, is free and masterly; yet there is a monotonous effect from the constant repetition of the same notes in the under part, which no variation of the harmony, even with Purcell's resources, can prevent (*y*).

The printed score of Dioclesian is dedicated, by the author, to Charles duke of Somerset; and in the dedication he says, that "poetry and painting have arrived at perfection in our own country (*z*). And adds, with more national modesty, that "Music is sick

(*y*) The same *ground-base* was the foundation of three several compositions: two duets and a solo air, by a whimsical composer of Bergamo, Il Cavalier Tarquinio Merula, the tenth volume of whose works was printed at Venice, 1635. He calls his first composition to this base, Duo, *sopra la CIECONA*. Though Purcell has chosen the same text, it does not appear that he has used a single bar or passage of Merula's melody. Etymologists are doubtful whence the word *Chaconne*, or *Ciacona*, was derived; it has been imagined, in Italy, that it was some *Cieco*, or blind fidler, who invented the first tune so called; and, perhaps, this base was known in Italy by that name. It differs but little from that in Corelli's twelfth sonata, op. 2da.; but not at all from Purcell's, except by his division of minims into crotchets.

MERULA.

VOL. III.

PURCELL.

(*z*) This matter, I fear, will be disputed by the connoisseurs and critics in painting; who will probably say, that the natives of England could boast of no *school*, and were entitled to but little individual honour from their own productions, till the present age; when, by the establishment of the *Royal Academy* and the admirable works of its members, particularly of its excellent president, Sir Joshua Reynolds, a school is at length formed in this country; which, if not equal to the best ancient schools of Italy, is at least superior to any one that the rest of Europe can boast at present. Till our own times, it will be added, the honour of the most valuable works in painting that have been produced upon this island, was wholly due to Holbens, Vandyke, Sir Peter Lely, Sir Godfrey Kneller, and other foreign artists. It is humiliating to confess, that

3 G

“ sick is yet but in its nonage, a forward child, which gives hope
 “ of what it may be hereafter in England, when the masters of it
 “ shall find more encouragement. ’Tis now learning *Italian*,
 “ which is its best master—we must shake off our barbarity by de-
 “ grees.”

In the preface to the first set of his sonatas, 1683, eight years before Dioclesian was published, he tells us, with great personal humility, that “ he has faithfully endeavoured at a just imitation of
 “ the most famed Italian masters—and he thinks (though unskill-
 “ ed in the language of that country) he may warrantably affirm that
 “ he is not mistaken in the power of the Italian notes, or elegance
 “ of their compositions.”

It does not appear that at this time any of the works of Corelli had been published even in Italy (a). And though, a few years before Purcell’s death, they may have been brought hither and circulated in manuscript, yet they were not published at any of our Music-shops, in print, till 1710. So that Purcell had no better Italian Music for violins to imitate than that of Bassani, Torelli, or others inferior to them; and though his sonatas discover no great knowledge of the bow, or genius of the instrument, they are infinitely superior in fancy, modulation, design, and contrivance, to all the Music of that kind, anterior to the works of Corelli.

As to his models for vocal Music, I think I can perceive obligations which he had to Carissimi in the best of his recitatives, and to Lulli in the worst; and it manifestly appears, that he was fond

that this has ever been the case with our secular Music, except, perhaps, in the single instance of Purcell. And, indeed, since his time nothing can secure success to an English composer, but dexterity at imitation. Handel, Geminiani, and the Italians in general, were long imitated; nor, of late years, would the strains of our countrymen have been borne, much less listened to with pleasure, but for the Italian taste and tincture in their composition. Alberti long moved our left hand in harpsichord lessons; Giardini the bow in violin solos; and now both fingers and bows, upon almost every

species of instrument, will be guided by Haydn, Kozeluch and Pleyel; nor will their owners for a long while see any other model.

(a) Paolo Colonna and Corelli had a controversy in 1685, soon after Corelli’s sonatas appeared, which were the first compositions he published. His name, at least, seems to have been well known in England in 1693, as T. Brown, in a copy of verses addressed to Purcell, and prefixed to the second book of *Harmonia Sacra*, has the following couplet:

“ In thy productions we with wonder find
 “ *Bassani’s* genius to *Corelli’s* join’d.

of

of Stradella's *manner* of writing, though he never seems to have pillaged his passages.

We must not quit his vocal Music without an honourable and grateful memorial of his CATCHES, ROUNDS, and GLEES, of which the humour, ingenuity, and melody, were so congenial with the national taste, as to render them almost the sole productions of that facetious kind that were in general use for near fourscore years. And though the countenance and premiums bestowed of late years upon this species of composition, as well as modern refinements in melody and performance, have given birth to many *Glees* of a more elegant, graceful, and exalted kind, than any which Purcell produced; yet he seems hardly ever to have been equalled in the wit, pleasantry, and contrivance of his *Catches*.

Index to a folio volume of Purcell's Compositions, in a collection of original manuscripts, in his own hand writing; now in the possession of his Majesty.

Anthems, with Symphonies and instrumental Parts.

"It is a good thing," &c. in four vocal parts, with a symphony, or prelude, for two violins and base. "O praise God in his holiness," with an overture or symphony, one violin and base accompaniment to the first movement, and two violins and base to the second, which is for eight voices. "Awake, put on thy strength," symphony, ritornels, solo verse, and chorus. "In thee, O Lord," with ditto. "The Lord is my light," &c. "I was glad." "My heart is fixed on God," ritornels. "Praise the Lord, O my soul," symphony, and for six voices, *a due cori*. "Rejoice in the Lord alway," for three voices, with symphonies. "Why do the Heathen so furiously rage," ditto. "Unto thee will I cry," ditto, two violins. "I will give thanks," ditto, five voices. One of the anthems performed at the coronation of King James II. two violins, base, and eight voices: treble, soprano, mezzo soprano, contralto, tenor, baritono, and two bases: an elaborate and fine composition. "O sing unto the Lord," symphony and chorus, for four and five voices, with two violins and base accompaniment: a long and elaborate work. "Praise the Lord, O my soul," symphony for two violins and base; solo verses and duets.

Odes and Miscellaneous Songs.

A welcome song, in the year 1681, for the King; symphony in four parts, solo verses, and chorus: "Swifter Isis, swifter flow." A welcome song for his Royal Highness, at his return from Scotland, in the year 1680; symphony in four parts, solo verses, trios, and chorus, *à 4*: "What, what shall be done in behalf of the man," &c. A welcome song for his Majesty at his return from New-Market, Oct. 21, 1682: "The summer's absence unconcern'd we bear," upon the same model as the preceding compositions. "How pleasant in this flow'ry plain," &c. a pastoral song, with a symphony for two flutes and a base, one and two voices, with a chorus, the last movement of which is left unfinished. "Hark! how the wild musicians sing," another pastoral for three voices, with two violins and base accompaniment, and chorus. "Hark! Damon, what Musick's this?" of the same kind—pastoral. "Above the tumults of a busy state," another pastoral duet. Ninth ode of Horace imitated in a dialogue between the poet and Lydia: "While you for me alone had charms," &c. Dialogue between Charon and Orpheus, a cantata for one and two voices. The Epicure: "Underneath this myrtle shade," *à 2*. The concealment: "No, to what purpose should I speak?" a cantata, with chorus. Job's curse: "Let the night perish," &c. "Amidst the shades and cool refreshing streams," a song. Duet, or two-part song: "See where she sits and in what comely wise," with two violins and base—excellent. A song that was performed to prince George upon his marriage with the lady Ann: "From hardy climes and dangerous toils of war;" a long and capital production. Mr. Cowley's complaint: "In a deep vision's intellectual scene;" recitatives, airs, and chorus. Song out of Mr. Herbert: "With sick and famished eyes;" a lamentation. The welcome song performed to his Majesty in the year 1683; symphonies and five verses: "Fly bold rebellion;" solo verses and finale for seven voices. A Latin song made upon St. Cecilia, whose day is commemorated yearly by all musicians, for three voices: "*Laudate Cecilliam.*" "Oh, oh, what a scene does entertain my sight;" a two-part song. "Though my mistress be fair," ditto. A serenading song: "Syl-
via,

“via, thou brighter eye of night;” a two-part song. “Go tell
“Aminta, gentle swain;” for two voices. The welcome song per-
formed to his Majesty, in the year 1684: “From those serene and
“rapt’rous joys;” a long composition, consisting of many different
airs and choruses. Song, on a ground: “Cease anxious world
“your fruitless pain.” The rich rival, out of Mr. Cowley:
“They say you’re angry;” a kind of cantata for one voice. “When
“Teucer from his father fled;” a two-part song, in Orpheus Bri-
tannicus. Sighs for our late sovereign King Charles II. “If pray’rs
“and tears,” &c. printed. “In some kind dream upon her slum-
“bers steal;” a two-part song. The thirty-fourth chapter of
Isaiah, paraphrased by Mr. Cowley: “Awake, awake, and with
“attention hear;” for one voice. Welcome song, 1685; being
the first song performed to King James II. “Why are all the mu-
“ses mute?” consisting of many airs and choruses. Two-part
song, the words by Mr. Cowley: “Here, here’s to thee Dick.”
Welcome song, 1688, consisting of a symphony, and many airs and
choruses; the longest work in the volume: “Ye tuneful muses
“raise your heads.” “If ever I more riches did desire;” a long
ode, with airs, duets, and choruses. Anacreon’s defeat, (single song):
“This poet sings the Trojan wars.” Welcome song, 1687:
“Sound the trumpet, beat the drum;” a very long composition.
A Latin hymn for two voices: “*Crucia in hac flamma.*” A song
that was performed at Mr. Maidwell’s, a school-master, on the 5th
of Aug. 1689; the words by one of his scholars:

“Celestial Music did the gods inspire,

“When at their feast Apollo touch’d his lyre.”

An overture and several airs and choruses. Birth-day ode for King
William; a long symphony, airs and choruses:

“How does the glorious day appear,

“The mightiest day in all the year.”

Another: “Of old when heroes thought it base.” Another:

“The bashful Thames for beauty so renown’d.” “The pale and

“the purple rose,” &c. And “In each truck,” &c. two-part

song, printed. “Sound trumpet, beat the drum;” another ode to

King

King William, to which he sets his name and date: "Mr. H. Purcell, 1690." The beginning of an ode for Queen Mary in the absence of King William; long symphony. "Arise my muse and to the tuneful lyre;" left unfinished.

List of Purcell's Church Music.

In *Boyce's Collection*. Complete Service in Bb. Full anthems: "O God thou art my God. O God thou hast cast. O Lord God of hosts. Verse anthems: Thy way, O God. Be merciful. Behold I bring you glad. They that go down to. Thy word is a lanthorn. O give thanks."

In *use at York Cathedral*: "Peace be within thy walls. Be merciful. Lord how long. Blessed are they. I was glad when. The way of God. O be joyful. Blessed is he. Blessed is the man."

In *Dr. Tudway's Collection, British Museum*: Whole service in Bb, different from Boyce's, with symphonies and ritornels. "My beloved spake. My song shall be alway. Rejoice in the Lord alway (bell anthem.) Praise the Lord, O my soul." Full anthems: "Save me, O God. Thou knowest Lord," for Queen Mary's funeral. Verse anthems: "We give thanks. Behold I bring you."

In *Dr. Aldrich's MS. Christ-church College, Oxon*: A Latin *Gloria Patri*, in five parts. Two Latin psalms, *Jehovah quam multi sunt beati omnes qui timent Dominum*; and seven hymns and psalms, for three and four voices. Ten different compositions. *Te Deum*. Two whole services. Thirty-six psalms, hymns, and anthems, besides what are in the *Harmonia Sacra*.

And now, having heartily praised Purcell's extensive genius and talents, I shall not dissemble his defects. Melody, during his short existence, was not sufficiently polished by great fingers; and though there are grand designs in his works, and masterly strokes of composition and expression, yet his melody wants symmetry and grace. And by writing on a given base, which forced him to submit to a crude, and sometimes a licentious and unwarrantable use of passing-notes, his harmony is not always so pure as it ought to be. However, in

all his Music that has been printed, except the compositions for the church, of which Dr. Boyce superintended the impression, errors of the press are innumerable, which must not be charged to his account.

An absurd custom prevailed in Purcell's time, which he carried to greater excess, perhaps, than any other composer, of repeating a word of one or two syllables an unlimited number of times, for the sake of the melody, and sometimes before the whole sentence has been heard. Such as no, no, no—all, all, all—pretty, pretty, pretty, &c. *ad infinitum* (b).

He was so little acquainted with the unlimited powers of the violin, that I have scarcely ever seen a becoming passage for that instrument in any one of his works; the symphonies and ritornels to his anthems and songs being equally deficient in force, invention, and effect. And though his sonatas contain many ingenious, and, at the time they were composed, new traits of melody and modulation, if they are compared with the productions of his cotemporary, Corelli, they will be called barbarous. But Corelli wrote for an instrument of which he was a great master: and who ever entirely succeeded in composing for one of which he was ignorant? When a great performer on keyed-instruments condescends to compose for the violin, upon which he has never been a good player, or the voice, without knowing in what good singing consists, the passages all come from the head and none from the hand, except the hand of a harpsichord player, which is ever unfit to suggest ideas either for a voice or for any other instrument than his own. Such a composer for the violin must inevitably embarrass the player with perpetual awkwardnesses and difficulties without effect, which discover an utter ignorance of the finger-board.

If Purcell, by travelling, or by *living longer* at home, had heard the great instrumental performers, as well as great singers, that arrived in this country soon after his decease, and had had such to compose for, his productions would have been more regular, ele-

(b) There is often equal redundance and absurdity in the use the Italians make, at present, of *si, si, si*, and *no, no, no*, in their songs.

gant, and graceful ; and he would certainly have set *English words* better than it was possible for any foreigner to do, for our feelings, however great his genius, or excellent, in other respects, his productions. But Purcell, like his successor, Arne, and others who have composed for the playhouse, had always an inferior band to the Italian opera composers, as well as inferior singers, and an inferior audience, to write for.

The diligent and candid Walther, by not having assigned to Purcell a niche in his Musical Dictionary, seems never to have heard of his existence ; but Purcell was so truly a *national* composer, that his name was not likely to be waisted to the continent ; and the narrow limits of his fame may be fairly ascribed, not only to the paucity and poverty of his compositions for instruments, for which the musical productions are an intelligible language to every country, but to his vocal compositions being solely adapted to English words, which rendered it unlikely for their influence to extend beyond the soil that produced them.

We should, however, have known as little of Lulli, as the French or Italians of Purcell, but for the partiality which Charles II. acquired by his long residence on the continent for the arts and amusements of France. The first attempts at operas here, after the Restoration, were either in French, or on the model of those that were then in high favour at Versailles. And whoever is equally acquainted with the recitative, I had almost said the general melody of Lulli and Purcell, must perceive a strong resemblance. Purcell, however, having infinitely more fancy, and indeed, harmonical resources, than the Frenchified Tuscan, his productions now afford far greater pleasure and amusement to a liberal lover of Music, than can be found, not only in the productions of Cambert and Grabu, whom Charles II. and to flatter his majesty, Dryden, patronised in preference to Purcell, but in all the noisy monotony of the *rhapsodist* of Quinault.

Let those who shall think Purcell has sacrificed the national honour by confessing his reverence for the productions of Italy, compare the secular productions of English musicians, from the death
of

of Queen Elizabeth to the year 1683, with those of Carissimi, Cesti, Stradella, and innumerable others of great abilities, and if they do not equally hate Music and truth, they will admire Purcell's probity, as well as his genius.

Indeed, Music was manifestly on the decline, in England, during the seventeenth century, till it was revived and invigorated by Purcell, whose genius, though less cultivated and polished, was equal to that of the greatest masters on the continent. And though his dramatic style and recitative were formed in a great measure on French models, there is a latent power and force in his expression of English words, whatever be the subject, that will make an unprejudiced native of this island feel, more than all the elegance, grace, and refinement of modern Music less happily applied, can do. And this pleasure is communicated to us, not by the symmetry or rhythm of modern melody, but by his having fortified, lengthened, and tuned, the true accents of our mother-tongue; those notes of passion, which an inhabitant of this island would breathe, in such situations as the words he has to set, describe. And these indigenous expressions of passion Purcell had the power to enforce by the energy of modulation, which, on some occasions, was bold, affecting, and sublime.

These remarks are addressed to none but Englishmen: for the expression of words can be felt only by the natives of any country, who seldom extend their admiration of foreign *vocal* Music, farther than to the general effect of its melody and harmony on the ear; nor has it any other advantage over *instrumental*, than that of being executed by the human voice, like *Solfeggi*. And if the Italians themselves did not come hither to give us the true expression of their songs, we should never discover it by study and practice.

It has been extremely unfortunate for our national taste and our national honour, that Orlando Gibbons, Pelham Humphrey, and Henry Purcell, our three best composers during the last century, were not blessed with sufficient longevity for their genius to expand in all its branches, or to form a school, which would have enabled us to proceed in the cultivation of Music without foreign assistance.

Orlando Gibbons died 1625, at forty-four.

Pelham Humphrey died 1674, at twenty-seven.

And Henry Purcell died 1695, at thirty-seven!

If these admirable composers had been blest with long life, we might have had a Music of our own, at least as good as that of France or Germany; which, without the assistance of the Italians, has long been admired and preferred to all other by the natives at large, though their princes have usually foreigners in their service. As it is, we have no school for composition, no well-digested method of study, nor, indeed, models of our own. Instrumental Music, therefore, has never gained much by our own abilities; for though some natives of England have had hands sufficient to execute the productions of the greatest masters on the continent, they have produced but little of their own that has been much esteemed. Handel's compositions for the organ and harpsichord, with those of Scarlatti and Alberti, were our chief practice and delight, for more than fifty years; while those of Corelli, Geminiani, Albionini, Vivaldi, Tesserini, Veracini, and Tartini, till the arrival of Giardini, supplied all our wants on the violin, during a still longer period. And as for the hautbois, Martini, and Fisher, with their scholars and imitators, are all that we have listened to with pleasure.

If a parallel were to be drawn between Purcell and any popular composer of a different country, reasons might be assigned for supposing him superior to every great and favourite cotemporary musician in Europe.

Carissimi and Stradella, if more polished in their style, were certainly less varied, and knew still less of instruments, than our countryman. They had both, perhaps, more grace and regularity, but infinitely less passion and fire.

The elder Scarlatti was more *recherché* and learned, but never so natural and affecting.

In Germany, if Keiser, during an active and much longer life, surpassed him in the number and excellence of his dramatic compositions, his productions for the church, could they be found, would, I believe, bear no comparison.

Lulli,

Lulli, blest likewise with superior longevity, composed also more operas than Purcell, and was the idol of the nation for which he laboured; but though his overtures long served as models, even to Purcell, as well as to the composers of all the rest of Europe, and his Music was performed by better fingers and a more numerous band, supported by the patronage of a court, and all the splendor of ingenious and costly exhibition; it is easy to see that even his theatrical works are more *manierées*, monotonous, and uninteresting in themselves, than those of Purcell; but in relinquishing the stage, and stepping on holy ground, we should have found, even in France, during all his glory, and the enthusiasm he raised, none of his votaries who would attempt to put his sacred Music in comparison with that of our countryman.

Rameau, the successor of Lulli in court and popular favour, and who had more learning and theoretical knowledge in the art, than perhaps any practical musician of modern times; yet, in pathos and expression of words and the passions, he was Purcell's inferior, even upon the stage; and in the church, he had no claim to celebrity.

Handel, who flourished in a less barbarous age for his art, has been acknowledged his superior in many particulars (c); but in none more than the art and grandeur of his choruses, the harmony and texture of his organ fugues, as well as his great style of playing that instrument; the majesty of his hautbois and grand concertos, the ingenuity of the accompaniments to his songs and choruses, and even in the general melody of the airs themselves; yet in the accent, passion, and expression of *English words*, the vocal Music of Purcell is, sometimes to my feelings, as superior to Handel's as an original poem to a translation.

(c) See account of his Commemoration, p. 39.

Progress of the Violin in England, to the End of the last Century.

The restoration of monarchy and episcopacy seems to have been not only favourable to sacred Music, but secular; for it may be ascribed to the particular pleasure which King Charles II. received from the gay and sprightly sound of the VIOLIN, that this instrument was introduced at court, and the houses of the nobility and gentry for any other purpose than country-dances, and festive mirth. Hitherto there seems to have been no public concerts; and in the Music of the chamber, in the performance of *Fancies* on instruments, which had taken place of vocal madrigals and motets, the violin had no admission, the whole business having been done by viols.

The use of the violin and its kindred instruments, the tenor and violoncello, in court, was doubtless brought from Italy to France (*d*), and from France to England; for Charles II. who, during the Usurpation, had spent a considerable time on the continent, where he heard nothing but French Music, upon his return to England, in imitation of Lewis XIV. established a band of violins, tenors, and basses, instead of the viols, lutes, and cornets, of which the court band used to consist.

The master of Charles the First's band we have already seen, was Nicholas Laniere, an Italian, who survived the Restoration some years; and at his decease, Matthew Lock was appointed to that office, with the same salary of £.200 a year; but about 1673, Cambert, a French musician, who had preceded Lulli in composing for and superintending the opera at Paris, when the patent was transferred to Lulli, came to England, and had, at least, the title of master to King Charles the Second's band.

From this time the violin family began to rise in reputation, and had an honourable place assigned it in the Music of the court, the theatres, and the chamber; and the succession of performers and compositions with which the nation was afterwards supplied from

(*d*) See above, p. 274. A chapter on the progress of the violin in Italy will be given hereafter.

Italy and elsewhere, stimulated the practice and established the character of that class of instruments, which have ever since been universally acknowledged to be the pillars of a well-ordered orchestra, and more capable of perfect intonation, expression, brilliancy, and effects, than any other that has ever been invented.

A general passion for this instrument, and for pieces expressly composed for it, as well as a taste for Italian Music, seem to have been excited in this country about the latter end of Charles the Second's reign, when French Music and French politics became equally odious to a great part of the nation. The Hon. Mr. North, whose manuscript *Memoirs* have so frequently been mentioned, and who listened attentively to every species of performance, says, that
 “ the decay of French Music, and favour of the Italian, came on by
 “ degrees. Its beginning was accidental, and occasioned by the
 “ arrival of NICOLA MATTEIS. He was an excellent musician,
 “ performed wonderfully on the violin. His manner was singular;
 “ but he excelled, in one respect, all that had been heard in Eng-
 “ land before : his *arcata*, or manner of bowing, his shakes, divi-
 “ sions, and, indeed, his whole style of performance, was surpris-
 “ ing, and every stroke of his bow was a mouthful.

“ All that he played was of his own composition, which mani-
 “ fested him to be a very exquisite harmonist, and of a boundless
 “ fancy and invention. And by all that I have been able to observe of
 “ his abilities, or to hear concerning those of other performers on
 “ the violin, none but Corelli seems to have surpassed him.

“ When he first came hither he was very poor, but not so poor
 “ as proud ; which prevented his being heard, or making useful
 “ acquaintance for a long time, except among a few merchants in
 “ the city, who patronised him. And setting a high value on his
 “ condescension, he made them indemnify him for the want of more
 “ general favour.

“ By degrees, however, he was more noticed, and was introduc-
 “ ed to perform at court. But his demeanor did not please, and
 “ he was thought capricious and troublesome ; as he took offence

“ if

“ if any one whifpered while he played, which was a kind of attention that had not been much in fafhion at our court. It was faid that the duke of Richmond would have fettled a penfion upon him, though he wifhed him to change his manner of playing, and would needs have one of his pages fhew him a better. Matteis, for the fake of the jeft, condefcended to take leffons of the page, but learned fo faft, that he foon out-ran him in his own way. But he continued fo outrageous in his demands, particularly for his folos, that few would comply with them, and he remained in narrow circumftances and obfcurity a long while.

“ Nor would his fuperior talents ever have contributed to better his fortune, had it not been for the zeal and friendly offices of two or three Dilettanti, his admirers. Thefe were Dr. Walgrave, a prodigy on the arch-lute; Sir Roger L' Eftange, an expert violift; and Mr. Bridgman, the under-fecretary, who accompanied well on the harpfichord. Thefe becoming acquainted with him, and courting him in his own way, had an opportunity of defcribing to him the temper of the Englifh, who, if humoured, would be liberal; but if uncivilly treated, would be fulky and defpife him and his talents. Affuring him that by a little complaifance he would neither want employment nor money.

“ By advice fo reasonable, they at length brought him into fuch good temper, that he became generally efteemed and fought after; and having many fcholars, though on moderate terms, his purfe filled apace, which confirmed his converfion.

“ After this, he difcovered a way of acquiring money, which was then perfectly new in this country. For obferving how much his fcholars admired the leffons he compofed for them, which were all duos, and that moft mufical gentlemen who heard them, wifhed to have copies of them, he was at the expence of having them neatly engraved on copper-plates, in oblong octavo, which was the beginning of engraving Mufic in England; and thefe he prefented, well bound, to lovers of the art and admirers of his talents, for which he often received three, four, and five guineas. And fo great were his encourage-

“ ment

“ment and profits in this species of traffic, that he printed four several books of *Ayres for the Violin*, in the same form and size.”

He printed lessons likewise for the guitar, of which instrument he was a consummate master, and had so much force upon it, as to be able to contend with the harpsichord, in concert.

Another book of his writing was designed to teach composition, ayre, and thorough base. Of this work, though it was printed, but few copies are subsisting. His full pieces, concertos, and solos, were never published, and are very scarce, if at all to be found.

The two first of the four books mentioned above, of which many copies were dispersed, consist of *preludes, allemands, sarabands, courants, giges, divisions on grounds, and double compositions fitted to all hands and capacities*. The third book has for title, *AYRES FOR THE VIOLIN*, to wit: *Preludes, Fugues, Allemands, Sarabands, Courants, Giges, Fancies, Divisions, and likewise other Passages, Introductions, and Fugues, for single and double Stops; with Divisions somewhat more artificial for the Improvement of the Hand, upon the Base-viol or Harpsichord*. The fourth book is entitled, *OTHER AYRES AND PIECES, for the Violin, Base-viol, and Harpsichord, somewhat more difficult and artificial than the former; composed for the Practice and Service of greater Masters upon those Instruments* (e).

Mr. North observes, that while the lovers of Music were acquainted with his manner of playing from his own books, which often happened in large assemblies, no one pretended to do the like; for none could command that fulness, grace, and truth, of which he was master. So that, in his own time, his compositions were thought impracticable from their difficulty; and since, as they were never thrown into the shops, they have been but little known. So that at present, now the instrument is so much advanced, no one can have the least idea of these pieces having ever been difficult, who was not a witness of his own manner of playing them. Indeed, his books, well studied, are a sufficient rudiment of artful composition.

(e) It is remarkable, that among such a variety of movements, not one *minuet* occurs; indeed, the term never appears in Corelli till he published his concertos in

1712, when this graceful dance began to have admission in almost every species of composition for instruments.

Another observation of this speculative Dilettante is, that in
 “ a numerous assembly, when Matteis alone was to entertain the
 “ company, having his friends Walgrave, L' Estrange, and Bridg-
 “ man about him, and flaming with good humour and enthusiasm,
 “ he has seized on the attention of the whole audience with such
 “ force and variety, as to prevent even a whisper for more than an
 “ hour together, however crowded the room.”

After this, it is easy to imagine that his reputation and abilities
 would enable him to accumulate wealth, or to live in splendor :
 he chose the latter, took a great house, and indulging appetite, lived
 so luxuriously, that he brought on diseases which soon put an end
 to his existence.

He left a son, Nicola Matteis, whom he taught on the violin
 from his cradle. “ I have seen the boy in coats,” says Mr. North,
 “ play to his father's guitar. When he grew up he became a celebrated
 “ master on the violin, in London, for several years. Being invited
 “ into Germany, he went to Vienna, and has continued there ever
 “ since, in full payment for all the masters we have received from
 “ these countries (*f*).”

Though the compositions of the elder Matteis would not now
 appear very original or elaborate, yet they still retain such a degree
 of facility and elegance, and so many traits of the beautiful melody
 that was floating about Italy during the youth of Corelli, as render
 them far from contemptible.

(*f*) The younger Matteis must have re-
 turned to England soon after Mr. North's
Memoirs of Music were written ; as I re-
 membered to have seen him at Shrewsbury,
 where he was settled as a language master
 as well as performer on the violin, in 1737.

I afterwards learned French and the violin
 of this master, who continued at Shrewsbury
 till his decease, about the year 1749. He
 played Corelli's solos with more simplicity
 and elegance than any performer I ever
 heard.

C H A P. VIII.

Of the Music of Italy in the CHURCH and CHAMBER, during the Seventeenth Century.

FROM the year 1600 to the present time, dramatic Music, which, occasionally, includes almost every species of composition, vocal and instrumental, will occupy so large a portion of the sequel of this work, that it will be necessary to treat the other branches of the art in a more summary way than heretofore, while there was little other Music to describe, than masses and madrigals.

Though the learned and elaborate style in which both the Music of the Church and Chamber, of which so ample an account has already been given, continued to be cultivated in Italy with great diligence, till near the middle of the century; yet a revolution in favour of melody and expression was preparing, even in sacred Music, by the success of dramatic composition, consisting of recitation and melodies for a single voice, which now began to be preferred to Music of many parts, in which canons, fugues, and full harmony, were the productions which chiefly employed the master's study and hearer's attention.

One of the most distinguished ecclesiastical composers of this period was LODOVICO VIADANA, who has the reputation of having invented the indication of chords by figures, in what the Italians call the *basso continuo*, and the English *thorough-bass*, or accompaniment on keyed-instruments, lutes, harps, and, in recitatives, even violoncellos; but I have found several instances of the minute beginnings of this expedient before the time of Viadana; though he was doubtless the first who drew up general rules for expressing harmony by figures over the base in 1615. Draudius (g), in an ample list of his ecclesiastical compositions, which were very numerous, tells us of one that authenticates his claim to this in-

(g) *Bibl. Class.*

vention, which was a collection of all his choral pieces, of one, two, three, and four parts; "with a *continued* and *general base*, adapted to the organ according to a *new invention*, and useful for every finger as well as organist; to which are added short rules and explanations for accompanying a general base, according to the new method." Viadana was therefore the first who composed an *organ base* different from the voice-part (*b*), in the execution of which the new invented figures enabled the performer to give the fingers the whole harmony of the several parts of a full composition, without seeing the score.

As the construction of *perpetual fugue*, or CANON, required more meditation and science than any other species of composition, there were several musicians during the seventeenth century, who, from an ambition to excel in such difficult undertakings, seem to have devoted as great a portion of their lives to these labours as holy men ever did to severe acts of piety and devotion, in order to be canonised.

JOHN PAUL CIMA, an eminent organist and composer at Milan, from 1591 to 1610, acquired great reputation among learned musicians, not only for his *motetti, canzoni, conseguenze, contrapunti doppii*, and *concerti ecclesiastici à 1, 2, 3, & 4 voci*, but as a *virtuosissimo compositore di CANONI, ricercate et altre vivezze, attenenti a i professori* (*i*).

But the *master general* of this musical artillery was now FRANCESCO SORIANO, maestro di capello of St. Peter's church at Rome, who, in 1610, published one hundred and ten canons upon the chant to the hymn *Ave Maris Stella*, for three, four, five, six, seven, and eight voices. Resolutions of these canons in score, with remarks, by Zacconi, 1625, in manuscript, were in the possession of the late respectable theorist and historian, P. Martini, who among his other musical curiosities, communicated to me this manuscript, which impressed me with a much higher opinion of the patience than the genius of Soriano. Few masters, except himself, could perhaps have composed these canons, but many must

(*b*) See Paolucci's *Arte Pratt. di Contrap.* Tom. I. p. 86.

(*i*) Picinelli Ateneo, p. 315.

have thought that the loss to Music would not have been very great, if they had never been composed. Baptist Doni, an enemy to learned Music, and a great advocate for the recitative and melodies for a single voice, which were now advancing into favour, says that though Soriano was generally allowed by musicians to be a learned contrapuntist, he never had genius sufficient to invent a single air that was beautiful or pleasing; on which account, he applied himself to the composition of elaborate fugues and canons: as in poetry, those who have no original ideas or invention can write acrostics and anagrams, by which they become only rhymers, not poets; so canonists should be called contrapuntists, not musicians (k).

MICHELI ROMANO, a scholar of Soriano, published in folio, 1615, at Venice, a curious canonical work, entitled *Musica Vaga et Artificiosa* (l), containing *motetti con obblighi, e canoni diversi*, as well for those who receive delight from the performance of curious Music, as for others who make it their study. There is a long preface to this book, addressed to masters and curious readers, in which the author gives a kind of history of his musical life, and the occasion of this work. It appears that he had been acquainted, and conversed on the subject of Music, with the most eminent professors, particularly canonists, of his time; at Venice with Gio. Gabrielli, Gio. Croce Chizzotto, and other celebrated musicians. In Naples, where he was with the prince of Venosa, with Scipione Stella, Gio. Batt. Paulo, Muzio Effrem, and Pomponio Nenna, at the time that Bartolomeo Roi was maestro di capella, and Gio. Macque organist to the vice-roy, and in the time of Rocco Rodio, Scipione Cerreto, Giustiniano Corcella, and Domenico Montella, learned musicians. In Ferrara with Luzzasco Luzzaschi, Fiorone Fioroni, Gio. Mazzoni maestro di capella of the Duomo at Lodi, Pietro Marfola, and other most learned musicians. In Milan, where he resided a year, he found D. Fulgentio Valesi Parmegiano, in the composition of canons *molto osservante*, with Guglielmo Arnone and Cesare Borgo, organists in that metropolis. At Rome, he was acquainted

(k) *Tratt. della Mus. Scenica, Op. omn.*
Tom. II. p. 129.

(l) For the full title of this book, in Italian, see above, page 327.

with that most intelligent Spanish musician, Sebastian Raval, who, on his arrival in that city, thinking himself the first professor in the world, not having yet found his equal in any other part of Italy, he challenged to a trial of skill Francesco Soriano, and Gio. Maria Nanino, *resto chiarito* (vanquished) at the first trial, *nondimeno volsero sentire tutto il suo sapere*; so that Raval ever after called Soriano and Nanino by no other title than *Signori Maestri*. Micheli was likewise acquainted with Annibale Stabile and Palestrina (*m*).

Those who still regard these contrivances with veneration, will find much entertainment in this book; but others, who seek for melody, grace, and modulation, will find in it nothing but toil and pedantry. And it must be owned, with due reverence for this species of musical science, that imagination is so manacled during the composition of these perpetual fugues, that elegant melody is always precluded, and, in general, harmony is rendered so meagre and imperfect, that in a canon of three or four parts, it is often reduced to a unison, octave, or insipid fourth.

(*m*) Micheli's work is so curious and scarce, that I shall give the studious reader a table of its contents:

Canon by D. Romano Micheli, on a subject given by Gio. Rosa of Florence.

Canon a due del Metallo.

— di Micheli.

Resolution of the same canon.

The same in score.

Another canon a due, by the same.

Two additional parts to ditto.

Resolution of the same.

Canon in imitation of the above.

Four canons by Metallo, in unis.

Canon à 3, with a fourth part.

Canon à 6, in score.

Canon two in one, by Metallo.

Resolution by Micheli.

Canon in imitation of the above.

Resolution of the same.

Two canons in one.

Resolution.

Canon by Metallo, with a third part.

Resolution by Micheli.

Ruota e cantilena del Metallo.

Aggionta fatta alla detta cantilena.

Score of the same for ten voices.

Eight canons in enigma, by Bianchieri.

Canon à 4, descending a tone.

Canon à 4.

Canon à 4, ascending a tone.

Canon with the words.

The same in score.

Canon à 4, by Metallo.

— by Micheli in imitation of the above.

Motetto à due in canon, with the resolution, and a continued base for an instrument.

Canon à due, with a third part.

Resolution of the same, with a fourth part.

Canon by Metallo: *Querite et invenientis*, à 1, 2, 3, & 4.

Two canons à 4, ditto.

Motetto à 4.

— à 5.

— *O quam pulchra es!*

Canon à 4, composed extempore.

Two other canons, à 4.

Canon à 4, upon a subject by Luca Marenzio.

Two canons à 4.

Two others ditto.

Eight more, on different subjects given by masters of the author's acquaintance.

Canon à 6.

Canon à 8.

Canon à 10.

Canon à 12.

Canon in twelve parts, to the words of the Antiphon: *Regina celi*.

The next eminent harmonist, who acquired reputation by the composition of canons, was FRANCESCO TURINI, organist of the Duomo at Brescia 1656, who published many learned compositions for the church and chamber, but particularly a mass for four voices, in 1643, in *canon*.

In this work there is a canon, upon the subject of which Handel has composed one of his finest instrumental fugues; but, according to his usual practice, whenever he adopted another's thought, he has enlivened and embellished this theme, like a man of true genius, with a counter subject, and shewn that he saw farther into its latent fertility than the original inventor (n).

C A N O N.

Among the most eminent and learned musicians and canonists of this period, must be ranked AGOSTINI PAOLO, the scholar of Bernardo Nanini, and successor in the Pontifical Chapel to Soriano. Antimo Liberati speaks of him as one of the most scientific and ingenious composers of his time, in every species of Music then cultivated. And tells us, that while he was maestro di capella of St. Peter's Church at Rome, he astonished the musical world with his productions for four, six, and eight choirs or choruses; some of which might be sung in four or six parts only, without dimi-

(n) The tenor leads off the subject, and is answered at the second bar by the soprano in the octave; at the third bar the base

begins a fifth below the tenor, and is answered at the fourth bar by the counter-tenor an octave above the base.

nishing

nishing or enervating the harmony. Padre Martini, who bears testimony to the truth of this eulogium, has inserted an *Agnus Dei*, in eight parts, of this composer, which is truly a curious production: three different canons being carried on at the same time, in so clear and natural a manner, both as to melody and harmony, that this learned father, who had been long exercised in such arduous enterprizes, speaks of it as one of the greatest efforts of genius and learning in this most difficult kind of composition.

Every species of Music that has been well received by the public, or admired by connoisseurs, has been so frequently and awkwardly imitated by men without genius, or pushed to excess by men without judgment, that it is soon thrown aside as vulgar and old-fashioned. Good canons and fugues can be produced but by few, yet as many have disgraced the invention by ignorance and dulness, the study of them is now almost wholly laid aside as a Gothic invention. P. Martini says, though the study of these elaborate contrivances is regarded by modern composers as useless toil, and more likely to corrupt good taste than contribute to the pleasure of the ear; yet, with moderation, such exercise is as useful to young students in counterpoint, as drawing difficult attitudes is to young painters (o). The greatest masters, during almost three centuries, have cultivated this ingenious harmonical contrivance, in order to sharpen intellect, and have been always respected in proportion to their success (p).

PIETRO FRANCESCO VALENTINI, of Rome, who flourished about the year 1645, seems to have made every subsequent canonist despair of emulating his subtilties and dexterity in the art. Indeed, he seems to have surpassed all that the most determined canonists had ever done, by the several works he published on the subject, in the following order: "Canon to the words *Illos tuos misericordes oculos ad nos converte*, with the Resolution in more than two thousand ways, for two, three, four, and five voices, Rome, 1629." "Canon, called the Knot of Solomon, for ninety-six voices, Rome, 1631." "Canon on four subjects for twenty voices, Rome, 1645."

(o) *Sagg. de Contrap.* Par. I. p. 46.

(p) *Ibid.* p. 190.

The first and most curious of these works seems to have been reprinted in 1655, as M. Marpurg of Berlin, and several other musical writers, in speaking of it, refer to an edition of that date. But P. Martini, who is in general very accurate in dates and citations, mentions Valentini's first canonical work under the year 1629. Kircher gives the subject, and an account of this canon in his *Musurgia*. M. Marpurg, in a periodical work called *Kritische Briefe*, or "Critical Letters on the Art of Music," Vol. II. 1763, quarto, has bestowed upwards of fifty pages on this canon, and not only given it a hundred different ways in notes, but explained more than two hundred of the several contrivances used by Valentini in the construction of canons on the subject given, which only consists of the following few simple notes contained in five bars of *alla breve* time, and a semibreve rest:

These notes are inverted, sung in *moto contrario*, in greater and less prolation, in major and minor keys, and in every possible way, without changing the intervals, yet still the canon is preserved inviolable.

No entire book has been written on the subject since. M. Marpurg, indeed, published in 1762, *L' Art de la Fugue*, in which *Canon*, the most rigid and exact of all fugues, is included; and P. Martini has given curious canons, perhaps the most unexceptionable and the best that have ever been composed, as head and tail-pieces to every chapter of his *History of Music*, besides publishing vocal duets in canon, and treating largely of the art of composing canons of every kind, in his *Saggio di Contrappunto*; but I know of no work that has been published since Valentini's, in which nothing but canons, and rules for constructing them, are contained.

Having discharged my duty, as an historian, to these profound canonists, I shall proceed to point out the names and merit of other eminent composers, who, in the learned style of the sixteenth century, continued to write fugues in their masses and motets, that
have

have been justly admired for their correctness of harmony and design.

The two Mazzochi, Domenico and Virgilio, brothers and Romans, were musicians of great eminence in the early part of the last century, who composed much Music for the church, and were much praised by the musical writers of those times. Of Domenico, I shall soon have further occasion to speak, as one of the last successful madrigalists, when that species of composition began to decline in favour. Virgilio was principal maestro di capella to the pope, and the master of Bontempi, the musical historian.

Michele and Valentini, though they wrote much for the church, acquired their chief reputation by canons, and learned treatises on the art of constructing them.

Frescobaldi, likewise, the celebrated organist and composer of fugues for his instrument, in a more clear and pleasing style than any of his predecessors, and who flourished from 1608 to 1635, produced many motets and masses for the church.

FRANCESCO FOGGIA, of Rome, a disciple of Paolo Agostini, flourished from 1645 to 1681. In his youth he was several years in the service of the Court of Bavaria, and the Arch-duke Leopold, afterwards emperor; but returning to Rome, he was appointed maestro di capella to the church of St. John Lateran, to Santa Maria Maggiore, to San Lorenzo in Damaso, and other great churches in that city. Antimo Liberati calls him the prop and father of Music and true ecclesiastical harmony; and says, that in his printed and manuscript productions he had manifested such a variety in his manner of writing as was seldom found in the works of one man: being equally excellent in the grand, the learned, the noble, the refined, the simple, and the pleasing style. And in examining his works, this panegyric does not seem overcharged, as far as Music then went, which was not arrived at melody, grace, or expression. He lived to upwards of eighty, is celebrated by Kircher in his *Musurgia*; and P. Martini has illustrated his doctrine in the *Saggio di Contrappunto* (q), with two admirable motets

(q) Tom. II. p. 47, and 54.

from his eighth opera, in which there is much ingenuity, and a greater variety of measure, than usual in church Music of the last century, where a movement in triple time had seldom admission.

But the two most learned and ecclesiastical composers of this period, were GREGORIO ALLEGRI, and ORAZIO BENEVOLI. Of these excellent harmonists some account has been given elsewhere, particularly of Allegri, the author of the celebrated *Miserere*, which is still sung in the Papal Chapel during Passion-week (r). Benevoli's skill and dexterity in polyphonic harmony, have likewise been mentioned in the course of this work (s). Allegri, who was a disciple of Maria Nanini, and admitted in the Pope's Chapel 1629, died in 1652; and Benevoli, who was appointed maestro di capella of St. Peter's church at Rome 1650, survived him about ten years. Antimo Liberati, the scholar of Benevoli, has celebrated his uncommon abilities in the highest strain of panegyric; telling us that he not only surpassed his master Bernard Nanino, but all the contrapuntists that had ever existed, in harmonizing four and even six choirs of four parts each, with as much facility of fugue and imitation, as if he had been only writing for one. Violent praise, as well as abuse, is always suspicious; but being in possession of several curious productions of this kind, by Benevoli, I can venture to affirm, that his powers of managing an unwieldy score are truly wonderful; particularly in a mass *a sei cori*, or for twenty-four voices, in which the learning and ingenuity surpass any thing of the kind that has come to my knowledge.

I have another mass of his composition, for twelve *soprani*, or treble voices, in constructing which, the nearness of the parts must have augmented the difficulty of avoiding confusion. His compositions of this kind have been recommended to musical students as models of perfection, by P. Martini, and P. Poalucci (t).

STEFFANO BERNARDI was a learned theorist, as well as composer of masses and madrigals of a most elaborate and correct kind.

(r) See *Italian Tour*, and preface to the Music performed at Rome *nella settimana santa*, printed by Bremner.

(s) See Vol. II. p. 11, and 474.

(t) *Sagg. di Contrap.* and *Arte Pratica di Contrap.* works which contain admirable precepts and examples for ecclesiastical compositions of every kind.

He flourished from 1611 to about 1634, and in 1623 was maestro di capella of the Duomo, at Verona. He published a didactic work, called *Porta Musicale*, the first part of which appeared at Verona 1615, in quarto; and, as an elementary tract, it has the merit of clearness and brevity.

ERCOLE BERNABEI, the scholar and successor of Benevoli at St. Peter's, and instructor of the Abate Steffani, may be ranked among the greatest masters of harmony, in the ancient ecclesiastical style of the last century. This composer being invited by the Elector of Bavaria to Munich, about the year 1650, entered into the service of that court, where he continued the rest of his life. His son, GIUSEPPE ANT. BERNABEI, after following his father's steps in the study of ecclesiastical harmony, surpassed him considerably in melody and modulation, as he lived long enough to see a great relaxation in the rigour of ancient rules. There is a canon by this composer in the first volume of Paolucci, page 158, and an excellent *Agnus Dei*, in P. Martini's *Sagg. di Contrap.* II. 129. extracted from his mass, for four voices, entitled *Laudate cum lætitia, qui fuistis in tristitia*. After succeeding his father as maestro di capella to the Elector of Bavaria, by whom he was honoured with the title of *Conseiller Aulique*, and publishing several compositions for the church, replete with musical science of the first class, he lived till the year 1732, extending his existence to the great age of eighty-nine.

These masters, with many other good harmonists, in the style of the preceding century, supplied the churches of Italy with innumerable compositions, in which the chief merit consisted in pure harmony, and the contrivance of canon, fugue, and imitation on simple and often insipid subjects; but to these excellencies the best moderns have added melody, a more varied modulation, and not only an attention to long and short syllables, but to the expression of words. In the fifteenth century almost every mass was composed upon the subject of some well known song or ballad; but these airs being psalmodic, and little more lively or varied than canto fermo, admitted of no greater variety of modulation than the ancient chants of the church, upon fragments of which, during the sixteenth and

part of the seventeenth centuries, it was thought necessary to construct the chief part of choral Music (*u*).

The church style of composition was, however, much altered during the last century, not only by the imitation of dramatic Music, and the introduction of instruments, but by writing in transposed keys, and supplying the deficiencies in the scales, which too strict an adherence to the species of octave, and modes of the church, had occasioned. Indeed, before this time, there was no decision of keys, either in sacred or secular Music, according to our present rules of beginning and ending upon the chord, major or minor, of some determinate note of the scale. The prohibitions were so numerous in the writings of the old theorists, that if the most regular modern compositions were tried by such rules as subsisted at the beginning of the last century, they would appear extremely licentious. No part was to be extended above or below the staff, or five regular lines, on which it was written; the combination of chords was never to be broken by moving to an unrelative harmony; and the intervals of the sharp seventh, the tritonus or sharp fourth, false fifth, sharp second, and even the major sixth, were prohibited. Indeed, an excellent composition might now be produced, merely from ancient disallowances.

Though much Music was produced during these times, which might flatter the ear with the sweetness of the harmony, yet I have met with none that was likely to touch the heart, before the productions of *Carissimi* and *Stradella* appeared, in which graceful, pathetic, and pleasing melody was united with pure harmony and ingenious contrivance. Of the works of these excellent musicians, who had the undefinable power of rendering every musical phrase interesting, either by melody, harmony, or modulation, a particular account will be given, in the chapters which treat of *Oratorios* and *Cantatas*, sacred and secular.

(*u*) Though the present students in counterpoint at Naples, and in other parts of Italy, still exercise themselves in putting parts to *canto fermo*, the writing masses or motets on the subjects of these chants is seldom done but in pure pedantry, and to give an air of antiquity to dry and fanci-

less compositions. Among Italian professors, the various styles of Music are very intelligibly expressed by the terms *à capella*, *stilo ecclesiastico spirituale*, *pieno*, *fugato*, *concertato*, for the church; and *secolare*, *profano*, *dramatico*, *serio*, *basso*, *da camera*, for the stage and chamber.

Cesti, Luigi, Graziani, Bassani, and Colonna, all composed for the church; yet as they were more advantageously known by their secular productions, a further account of them will be given elsewhere.

Motetti Passeggiati, à Voce sola, were published by KAPSBERGER at Rome, in 1612, which seem the first solo anthems in which divisions had place. But divisions, in motets for a single voice, began at this time to be long and numerous; for, in a work published at Venice 1615, called *Serena Celeste*, or "the Celestial Siren," consisting of *motetti a una, due, e tre voci*, by Bonini, a monk of Valembrorsa, there are divisions to the alleluja, and to single syllables of the hymns of the church, as long as in the opera bravura airs of modern times: and in the *Seste Musiche* of Claudio Seracini of Siena, published 1624, I find the following division to one syllable and one base:

It is a very curious circumstance, that at the closes, where a shake upon the second of the key is now expected, it is here written at full length in semiquavers, upon one note. This I should have supposed to have been the caprice of an individual, if I had not found it elsewhere; but the same monotonous trill occurs not only in songs of this period, but in another set of *Motetti à Voce sola, et à doi*, by Ortensio Polidoro, maestro di capella of the Duomo at Pesaro, 1636, twenty-one years after (x). In the burlesque cantata of Tarquinio Merula, for a base voice, published 1638, the

(x) Indeed, this monotonous trill is described in notes, and recommended to the practice of students in singing, by the cele-

brated Caccini, in his *Nuove Musiche*, Ven. 1615.

poet,

poet, after advising Curtius against so rash a step, tells him, that though he may easily find his way to the bottom of the gulph into which he was about to plunge, yet, he adds, *quanto al ritornare, sarà un difficile* PASSO; to which last word a division of six bars, of sixteen semiquavers in each, is given, in the course of which, the finger is carried from D on the sixth space in the base, down to the abyss of double C. There is another division of seven bars at the last close, in which the passages are echoed, piano, and the trill of the times in iterations of the same note, in semiquavers, is written twice at full length. Afterwards, Graziani, Cesti, Luigi, Bassani, and innumerable others, multiplied notes without end, in their *motetti*, and *cantate sacri*, in what seem now vulgar and insipid passages. Besides these, the *salmi*, *stabat maters*, *misereres*, and *salve reginas*, with solo airs, were introduced into the church in the dramatic style, sometimes with little judgment, taste, or propriety.

Madrigals, though their favour diminished in proportion as the musical drama, which was more generally intelligible to uncultivated ears, advanced towards perfection, yet there were many candidates for fame in that species of composition, during the early part of the last century. The chief of these were TOMASO PECCI, ALES. GRANDI, SIGISMONDO D'INDIA, POMPONIO NENNA, IL CAVALIER TARQUINIO MERULA, PALLAVICINI, and DOMENICO MAZZOCCHI. I have scored many of the madrigals of these masters, but found no new ideas, or new harmonies, in any of them, except those of Mazzocchi; and as he seems to have penetrated further into latent effects and refinements than the rest, I shall give some account of a set of madrigals which he published at Rome in 1638, in score, and dedicated to Cardinal Barberini. In his dedication, he pronounces madrigals to be the most ingenious species of composition that Music could boast. And yet, he says, few were composed, and still fewer sung, at the time he published this work, when they were nearly banished from all concerts (y).

(y) *Dall' Accademie*. The word is still used in Italy for musical performances and assemblies, out of the theatre.

As secular melody was improved by the cultivation of dramatic Music, so choral harmony was meliorated by the new combinations that were hazarded in madrigals. And the two Mazzocchi, during this period, contributed greatly, by their numerous works for the church, to improve the more solemn and grave manner of writing for sacred purposes, by extending the bounds of harmony, without which ecclesiastical Music could not sustain its dignity, or be suitable to the purposes of its destination. A clear, picturesque, and graceful melody seems infinitely more necessary for the stage than the church; as it is there the voice of passion, and medium through which lyric and narrative poetry can alone be rendered intelligible. In the church, where new poetry, prayers, or sentiments of piety seldom have admission, and where nothing is sung that has not often been previously read and heard by every member of the congregation, the clothing such portions of scripture, or of the liturgy, as are appointed to be sung, in rich and complicated harmony, adds greatly to their solemnity, by precluding all such frivolous and fantastical strains as remind the hearer of secular amusements.

Domenico Mazzocchi, besides several new combinations, and a more bold and masterly use of discords in ligature than can be found in the works of his predecessors, if we except Monteverde (z), first proposed several refinements in the execution of his madrigals, and invented characters of *crescendo*, *diminuendo*, *piano*, *forte*, and the enharmonic sharp. In his eighth madrigal he has made the most frequent use of these new indications. Page 73, there are, indeed, misapplications of the enharmonic diesis to E and B sharp, which is at present rightly appropriated by the most accurate contrapuntists, to notes that have been already sharp, as a sign of their being still raised a semitone minor. Enharmonic, similar to that of the ancients, we have none, nor is it practicable in modern counterpoint, where, having no fundamental base for quarter tones, their use in harmony would produce no other

(z) See above, p. 233.

effect to the hearer than that of singing or playing out of tune (a).

The only madrigalists after Mazzocchi, who much distinguished themselves, were Stradella, Alessandro Scarlatti (b), Bononcini, Lotti, Pertì, and Caldara, of whom we shall have occasion to speak among the most eminent composers of operas and cantatas.

The Cavalier Tarquinio Merula, who flourished from 1628 to 1640, has been mentioned among grave composers for the church, and madrigalists; but his secular compositions are almost all so tainted with caprice and buffoonery, as to render them more singular and original, than those of any of his contemporaries. He was fond of writing upon a ground base, and in his *Libro secondo delle Musiche Concertate*, published 1635, he has composed a three-part song, with ritornels for two violins and a base, *sopra la ciecona*. In 1638, he published a burlesque cantata called *Curtio Precipitato*; and among other whimsical things in this book, there is a *Canzonetta Spirituale sopra la Nanna*, or lullaby, consisting of only these two

notes in the base:  He has composed a learned fugue in four parts, on the declension of *Hic, hæc, hoc*; and another upon *Quis vel qui: nominativo qui, quæ, quod, &c.* This last consists of several movements which are supported with vivacity, and imitations of the cant and stammering of school-boys in repeating their grammatical lesson. The single vocal airs of this period by Merula, and innumerable others, that I have examined, in order to trace the progress of Italian melody, *ab ovo*, are dull, monotonous, and inelegant. Imagination, as yet, was too much,

(a) Mr. Keeble (*Theory of Harmonics*) pretends to have discovered the fundamental base to all the ancient scales, and, among the rest, to the enharmonic! but produces no classical authority in support of his opinion; nor has he had the courage to exhibit any Music of his own composition, in which he has ventured at enharmonic combinations. Indeed, if the Greek preposition *ἐν* were ever used as a privative, and *ἁρμονία* with the ancients had the same meaning as *harmony* with the moderns, I should imagine that *enharmonic* originally implied

inharmonious, incapable of harmony?

(b) It seems an indispensable duty to inform the curious reader, that there is a madrigal (*Cor mio*) by this composer, for four sopranos and a contralto voice, inserted in the second part of P. Martini's *Saggi di Contrap.* which surpasses in art and ingenuity all the compositions of that kind which I have seen. The expression of the words, and passages of imitation, are still elegant and new. The learned editor has pointed out all its beauties in an excellent commentary.

fettered by canon, fugue, and ecclesiastical modes, to attempt the use of her wings. In the perusal of the Music of the times, I collected fragments of the infant lisp in the vocal language, which has been since so highly polished; but neither found in the subjects of fugue, or vocal divisions, any thing like invention or grace, till after the time of Carissimi and Stradella, who seem to have been the first gifted musicians of Italy.

Little Music, purely *instrumental*, seems to have been composed till the latter end of the seventeenth century. Lutes and guitars, of different sizes, were more used in accompanying the voice, than in lessons, solos, sonatas, or concertos. Viols and violins had a similar employment in the churches, on great festivals, in augmenting the force of choral compositions, by doubling the voice-parts, and playing short ritornels. The Italians have not cultivated wind-instruments so much as the Germans; and yet, during the present century, Martinelli Bitti, Giuseppe San Martini, and the two Bezozzis, brought the oboe and bassoon to very great perfection. The most important improvements of instrumental Music will be included in the progress of the violin, except those of the *organ*, to which noble instrument Frescobaldi added new dignity and attractions by his pleasing and masterly fugues, which were soon imitated all over Europe, wherever there was an organ~~ist~~, and an organ^{ist} possessed of hand and head capable of emulating a style so suitable to the genius of that most comprehensive of all instruments.

GIROLAMO FRESCOBALDI was a native of Ferrara, but went, early in his life, to Rome, with his master Milleville, where he was elected organist of St. Peter's church. All the musical writers of Italy have celebrated his talents; and his works, which still remain, are indisputable vouchers of the truth of their encomiums. Quadrio says, that early in his youth, as a singer, he delighted every ear, and was praised by every tongue in the principal cities of Italy. But his chief excellence consisted in composing and playing on the organ and harpsichord, for which he became so renowned, that his works, both printed and manuscript, were in the hands of all professors and collectors of musical compositions. The emperor

Ferdinand III. sent Froberger, a young German of promising genius, to Rome, on purpose to receive instructions from Frescobaldi; by which he profited so well, that he was appointed imperial organist on his return. According to Della Valle, Frescobaldi was living in 1641. His first work, entitled *Recercari et Canzoni Franceſe, fatta ſopra diverſi oblihi in Partitura*, are the first compositions that I have ſeen printed in ſcore, and with bars. They are likewise the first *regular fugues* that I have found upon *one* ſubject, or of two ſubjects carried on at the ſame time, from the beginning of a movement to the end. *Recercari* and *fantasie* preceded ſonatas and concertos, and were the first compositions expreſsly made for instruments, after the invention of counterpoint. The fugues of Frescobaldi have great merit, if we conſider the ſtate of instrumental Muſic at the time they were produced; the ſubjects are marked and pleaſing, the harmony pure, and the ſtyle chaſte and clear. It is not ſaid in the title-page for what instruments the ſeveral parts were deſigned; but as the author was a great organ-player, I make no doubt but that they were first produced by and for that instrument, as all the four parts are ſo compact and cloſely connected, that they are ſtill within the graſp of the two hands. Notwithſtanding many of theſe fugues are upon two, three, and even four ſubjects, and every learned artifice of inverſion, augmentation, diminution, and moto contrario, is uſed, he has had the dexterity to avoid confuſion. The *Toccate per Cembalo*, by this author, published at Rome in 1637, upon ſix lines for the right hand, and eight for the left, are very full and of difficult execution. Theſe pieces being embellished with the fashionable diviſions and graces of the times, have ſuffered more by age than the *ricercari*, which have all the ſimplicity of vocal fugues in the church ſtyle. But even in his *toccate* and variations on old airs, we find more taſte and paſſages which have ſtood their ground, than in any other harpſichord Muſic of the ſame period. The following is the order of ſucceſſion of famous organiſts, in Italy, during the laſt century: Milleville, of Ferrara, the maſter of Frescobaldi, flouriſhed about 1600. Frescobaldi published his first

2^d book of Toc. &c.
the 1st republished in
1626, for the title ſa
riſtampato l'anno
1628.

work at Rome 1615. Ereole Pasquino, of the same city, began to flourish about 1620, and his son Bernard Pasquino, the master of Gasparini, about 1672; he was cotemporary with Corelli, and frequently played in the same orchestra with him at the opera at Rome (c). Zipoli of Rome, Domenico Scarlatti of Naples, Alberti of Venice, and Paradies, have distinguished themselves by their performance and compositions for keyed-instruments, during the present century, more than any of their countrymen.

Near the latter end of the last century a species of learned and elaborate *Chamber Duets* for voices began to be in favour. The first that I have found, of this kind, were composed by JOHN BONONCINI, and published at Bologna in 1691. Soon after, those of the admirable ABATE STEFFANI were dispersed in manuscript throughout Europe. These were followed by the duets of CLARI, HANDEL, MARCELLO, GASPARINI, LOTTI, HASSE, and DURANTE.

Notwithstanding the purity of harmony, ingenuity of design and imitation, and masterly style of these compositions, there seems a radical imperfection in the plan, with respect to the expression of the words, and propriety of two persons repeating and joining in the same complaint or sentiment, whatever it may be, instead of preserving two distinct characters, as in modern dramatic duets. But these chamber duets were perhaps meant originally as *studij* for fingers, in which the passages being echoed in fugue excited emulation in the performance, and furnished an opportunity of comparing the rapidity and neatness of the execution, as the comparative speed of two coursers is best known by their *running a trial*.

AGOSTINO STEFFANI, a scholar of the elder Bernabei, was born in 1655. Though Walther and most of the Germans, who wish to rank him among their countrymen, say that Lepsing was the place of his birth, yet Handel and the Italians make him a native of Castello Franco, in the Venetian state. He was a chorister at St. Mark's during his youth, where his voice was so much ad-

(c) See *Parah. des Fran. et des Ital.* p. 110.

mired by a German nobleman, that, obtaining his dismissal, he took him to Munich in Bavaria, and had him educated, not only in Music under the celebrated Ercole Bernabei, but in literature and theology sufficient for priest's orders; in consequence of which, after ordination, he was distinguished by the title of Abate, or Abbot, which he retained till late in life, when he was elected bishop of Spiga.

In 1674, at the age of nineteen, he published his *Psalms*, in eight parts. He likewise published *Sonate à 4 Stromenti*; but his chamber duets are the most celebrated of his works, and, indeed, of that species of writing. In his little tract, *Della certezza Dei principij della Musica*, he has treated the subject of musical imitation and expression, according to P. Martini, like a philosopher, and agreeable to mathematical principles. This work, which I have never seen, was so admired in Germany that it was translated into the language of that country, and reprinted eight several times. Walther and Marpurg have given the following list of Italian musical dramas or operas, which the admirable Steffani set between the year 1695 and 1699 for the court of Hanover, where he resided many years as maestro di capella: *Alessandro, Orlando, Enrico, Alcide, Alcibiade, Atalanta*, and *Il Trionfo del Fato*; which were afterwards translated into German, and performed to his Music at Hamburg. About the year 1724, after he had quitted the court of Hanover, where he is said to have resigned his office as maestro di capella, in favour of Handel, he was elected president of the Academy of Ancient Music in London. In 1729, he went into Italy to see his native country and relations, but returned the next year to Hanover. However, soon after, having some business to transact at Franckfort, he was there seized with an indisposition, of which in a few days he died, at near fourscore. There are perhaps no compositions more correct, or fugues in which the subjects are more pleasing, or answers and imitations more artful, than are to be found in the duets of Steffani, which, in a collection made for Queen Caroline, and now in the possession of his Majesty, amount to near one hundred. The greatest singers of Italy dur-

ing the last age used to exercise themselves in these duets, as Solfeggi. Mrs. Arne, the widow of the late Dr. Arne, has frequently assured me, that she had heard Senesino and Strada often sing them during their morning studies.

CARLO MARIA CLARI, of Pisa, a scholar of Colonna, and maestro di capella of the cathedral of Pistoja, did not publish his excellent chamber duets and trios till 1720. They had, however, been dispersed in manuscript long before this period; and though the duets of Steffani were more early known, it does not appear that they had been his model; for he was a composer of great eminence so early as the year 1695, when he set an opera for the theatre of Bologna, entitled *Il Savio Delirante*, which was extremely admired. His style of duetti and terzetti certainly resembles that of Steffani, but we find no similarity of passage, and sometimes he is superior to the Abate in grandeur of subject, and elegance of phrase in his melodies. Handel is supposed to have availed himself of Clari's subjects, and sometimes more, in the choruses of Theodora.

FRANCESCO DURANTE, whose duets have superseded all others in the favour of great singers and professors, was long master of the conservatorio of Sant' Onofrio, at Naples, and regarded as the greatest harmonist, as well as the best instructor, of his time. Among his disciples he had the honour to number Pergolesi, Terradellas, Piccini, Sacchini, Traetta, Guglielmi, and Paesello. His masses and motets are still in use, and models of correct writing, with the students of the several conservatorios of Naples. His duets were formed from the airs of his own master Alessandro Scarlatti's cantatas. They are more in dialogue than fugue, or duo; but composed of the most select, beautiful, and impassioned traits of melody that the creative genius of the elder Scarlatti had ever invented, and are put together with such science, that it seems as if art and refinement in this species of composition could go no further (*d*).

(*d*) Sacchini, who used to teach these duets to his favourite scholars, seldom finished his lesson without kissing the book. And, indeed, to hear them in a select company, which has often fortunately happened to myself, when Pacchierotti, Rubinelli, Mar-

chesi, Rauzzini, or Mortellari have performed a part, affords to lovers of such refined and artificial composition, a pleasure the most exquisite which vocal Music can bestow.

Most of the books published in Italy on the theory and practice of Music, during the last century, have, occasionally, been mentioned and characterised, in the course of this work: however, to save inquisitive readers the trouble of turning over different volumes in search of them, I shall here give a chronological list of the principal treatises that appeared from the year 1600 to the beginning of the present century.

The first, and indeed the most ample musical treatise that was published during this period, was *El Melopeo y Maestro*, written in Spanish by DOMENICO PEDRO CERONE, Naples, 1613. This is a scarce and curious book consisting of near twelve hundred folio pages, among which though many are bestowed upon obsolete science, yet there is a complete body of all the speculative and practical musical knowledge of the times (e).

In 1615 was published at Venice in folio, a book entitled *Il Transilvano*, a dialogue between the author and his scholar, a prince of Transilvania, by GIROLAMO DIRUTA, organist of the cathedral at Chioggia. It contains instructions for playing the organ and other keyed-instrument, with preludes by most of the celebrated organists of Italy at the time; but in these no keys are used but those of the church, and all the passages consist of running up and down the scale with both hands, alternately, without other intention than to exercise the fingers in the most obvious and vulgar divisions then in use.

In 1618, FABIO COLONNA, a Roman nobleman and celebrated mathematician, published a tract, entitled *Della Sambuca Lincea, ovvero dell' Instrumento Musico perfetto*; a speculative work, now become very scarce, on the division of the diapason, which at no time could be of much use to practical musicians, but at present, when so many better treatises on harmonics are extant, it would not be read, if it could be found.

The obligations which astronomy, mathematics, and the general knowledge of nature, have had to GALILEO GALILEI, are well known; but his enquiries into the propagation, properties, and

(e) See Vol. II. p. 96.

ratios of sound; discovering the harmonic proportions into which a single string divides itself when sounding; the sympathy of perfect consonance, in one string causing another to sound that is tuned in unison, octave, or fifth, have been so much the means of extending the knowledge of harmonics, by subsequent writers, that this great philosopher as well merits an honourable niche among benefactors to the *science*, as his father Vincenzo Galilei, among those who have advanced the *art* of Music by their labours. Galileo, who died 1642, at seventy-eight years of age, in his *Discorsi e Demonstrationi Matematiche*, treats of the vibrations of strings; harmonies of kindred sounds; propagation of sound, and of musical proportions. The dedication of these discourses to the Conte de Noailles, is dated 1638, four years before the author's death (*f*).

Of the writings of BATISTA DONI such frequent mention has been made in the course of this work, and their merits so amply discussed in the first volume, page 116, that further notice of them here seems unnecessary.

In 1644 was published, by GALEAZZO SABBATINI, *Regola facile e breve per Sonar sopra il basso continuo nell' Organo*. This seems to have been the second tract, after Viadana's, that appeared on the subject of thorough-bass. The author is much praised for his science by Kircher in his *Musurgia*, and by Walther in his Musical Dictionary. But the book is very inadequate to the present wants of musical students, treating of nothing but common chords, which are invariably given to every note of the scale.

A small elementary tract by HORATIO SCALETTA, maestro di capella at Bergamo, was published in 1647, called *Scali di Musica per Principianti*. Few of the thorns and brambles which musical incipients meet with in the course of their studies, have been removed by this writer.

(*f*) *Opere del Galileo*. In Bologna 1655. Vol. II. Dial. 1mo. p. 74, et seq. It has long been a received opinion, that Galileo was the natural son of Vincenzo Galilei, a Florentine nobleman, (see above page 171 and 244); but this opinion has lately been confuted by several Italian writers, particularly Signor Carlo Giuliani, who sent the late M. Diderot, one of the editors of

the Encyclopedie, where the illegitimacy of Galileo is asserted, the necessary documents to prove, that this great philosopher, born at Pisa February 19th 1564, was the legitimate offspring of Vincenzo Galilei and Giulia di Corimo Ammanati di Pescia, his true and lawful wife. See *Elogj Italiani*, Tomo V.

Regole di Musica, in five treatises, in which are promised "true and easy instructions for canto fermo, canto figurato, counterpoint, singing, and many other new and curious things," by GIOVANNI D'AVELLA, a friar, Roma, 1657. The splendid promises on the title-page are, however, as usual, very incompletely fulfilled. The book is full of prejudices in favour of old rules, with many that are peculiar to the author; which render what was before dark and difficult, still more unintelligible. From his ignorance of history, and the Music of the ancients, he advances innumerable absurdities, giving the Guidonian hand, not only to Boethius, but to Plato and Aristotle.

Sistema Musico, or "Speculative Music, explaining the most celebrated Systems in all the Genera," by LEMME ROSSI, of Perugia, quarto, 1666. This is one of the clearest and best digested treatises of harmonics that was produced in Italy, during the last century.

Another theoretical, but more desultory and fanciful work, was published at Bologna, 1670, called *Speculationi di Musica*, by PIETRO MENGOLI, a celebrated mathematician. An account of this treatise was given in the *Phil. Trans.* Vol. VIII. N° c. page 6194, seemingly by Birchenha, who, at the close of the article, has not forgotten himself, or his own interest (g). The speculations contained in Mengoli's work are some of them specious and ingenious; but the philosophy of sound has been so much more scientifically and clearly treated since its publication, that the difficulty of finding the book is no great impediment to the advancement of Music.

Li Primi Albori Musicali, per li Principianti della Musica figurata, by LORENZO PENNA, of Bologna, is one of the best treatises on practical Music that was published in Italy during the last century. The first sketch of the work was published in 1656. A second edition, enlarged, of the first book, appeared at Bologna, 1674. The second book at Venice, 1678; and the whole completed, in three books, 1684. In 1696, the work had gone through five editions. The author's rules for counterpoint, and extemporary

(g) For an account of this musical empiric, see above, p. 472.

playing on keyed-instruments, are concise and clear, as far as they go; which is, however, very short of what is now wanted, since the bounds of modulation and use of discords have been so much extended.

GIO. MARIA BONONCINI, *Modanese, Accademico Filarmonico di Bologna*, and father of the celebrated John and Antonio Bononcini, published in 1673, a work entitled *Il Musico Prattico*, or the Practical Musician, dedicated to the Emperor Leopold, in thin quarto. This treatise contains many useful precepts, and examples of composition; but is neither so accurate as to be implicitly followed, nor so ample as to supply all the wants of a musical student of the present times. Page 18, he speaks of a canon, in his opera terza, for fifteen hundred and ninety-two voices, or six hundred and forty-eight choirs; which, on account of the difficulty of finding such a number of singers assembled together, he has reduced to twenty-two. In the historical part of this tract, his knowledge is not very profound, or reading extensive; and the authors he cites, in support of his information, give it no additional weight. The examples he has given of the use of the *second*, page 64, are, in many instances, erroneous, and such as can be found in the works of no good contrapuntist of the present century. The second is not only confounded with the ninth by this author, page 64, but improperly prepared and resolved.

This discord seems to require one of the parts to remain stationary, till the suspended harmony is completed; but Bononcini often puts both parts in motion. In his example of counterpoint upon a plain song, page 76, there are other disallowances:

Much

Much explanation and instruction are given for the ecclesiastical modes, but none of the keys used in secular Music, are defined or ascertained.

Del Suono de' Tremori Armonici e dell' Udito, by DANIEL BARTOLI, in Bologna, 1680. In this truly scientific and ingenious work are to be found several discoveries in harmonics, that were pursued by posterior writers on the subject. It contains four dissertations: the first treats of the similarity between the circular undulations occasioned in still-water when a stone is thrown into it, and the propagation and motion of sound. The second, of the motion of sound compared with that of light; of echoes, or reflexion of sound, and of its augmentation in a whispering room or gallery. Third, of harmonic vibrations, and ratios of sound; of sympathetic sounds; of the breaking a glass with the voice. Fourth, of the mixture of sounds; of consonance; harmonics; and the immense increase of sounds in a vessel, or inclosed place, by repercussion. With many other curious enquiries; and ends with the anatomy of the ear.

Lettera scritta, &c. or a Letter written by ANTIMO LIBERATI, in answer to one by Ovidio Persapegii, printed at Rome, 1685. The author of this letter was a scholar of Orazio Benevoli, a *soprano* in the Pope's chapel, maestro di capella of several churches in Rome, and, consequently, himself a composer. His letter contains characters of the great Roman masters, and descriptions of styles, more resembling sound criticism than any musical work of the last century; but it is, unluckily, written in such a vein of general panegyric, as is more likely to generate scepticism in the minds of modern readers, than conviction.

The poet Redi, in the notes to his *Bacco in Toscano*, a dithyrambic poem, published 1685, has given many curious etymologies and explanations of the musical terms used in Italy in early times.

ANGELO BERARDI published at Bologna a considerable number of musical tracts, between the year 1681 and 1693, which, with a large portion of pedantry and common-place information, contain much curious and useful knowledge. Their titles are: *Ragionamenti Musicali*, Musical Dissertations; *Documenti Armonici*,

Harmonical Documents ; *Miscellanea Musicale*, the Musical Miscellany. *Arcani Musicali*, *Dialogo*, Musical Arcana, a Dialogue ; and the *Perche Musicale*, Musical Definitions. If the whole had been compressed, methodised, and digested into a single treatise, and all the musical information dispersed through these several tracts arranged in a regular and gradual order, a more useful and practical didactic work might have been produced, than Italy seems to have furnished during the last century.

Historia Musica di GIO. ANDR. ANGELINI BONTEMPI. Of this work, an account sufficiently ample has been given in the first volume, page 131, except stigmatising the pedantry with which the author has pompously endeavoured to give a scientific air to the fabulous stories of the Music of the ancients, and to the scanty information he has furnished concerning the Music of the moderns. Indeed, by the frequent use he makes of scientific terms, his book, when casually opened, has more the appearance of a dry mathematical treatise, than the history of an elegant art.

Of the general state of MELODY in Italy, during the early part of the last century, before it was purified and polished in the theatre, or enriched and embellished by the genius of Carissimi and Stradella, the musical reader will perhaps be best enabled to form an opinion by the following fragments, or musical phrases, taken from the works of the best secular composers of the time. As every age has its favourite jokes, proverbs, and cant in language ; so in Music, every period has its favourite passages and closes, which being perhaps originally produced by some great and popular master, are immediately adopted by all cotemporary musicians. Thus a beautiful new passage soon becomes common property, and is incorporated in the general language of Music.

In many of the dialogues of these times, composed in recitative and short fragments of air, such as Lulli afterwards established in the French opera, the base to the recitative has passages and leading notes, exactly similar to those which continued in the serious operas of France, till very lately, with perpetual cadences in the voice-part.

Progress of the VIOLIN in Italy, from the Sixteenth Century, to the Present Time.

BALTAZARINI, an Italian, called in France DE BEAUJOYEUX, who, with a *Band of Violins*, was sent from Piedmont by Marechal Brissac to Queen Catherine de Medicis in 1577, and appointed her *premier valet de chambre*, and master of her band, is the first famous *violinist* on record.

GIOSEFFO GUAMI, organist of Lucca cathedral, and a voluminous composer of sacred *cantiones*, or motets, published about 1586, is celebrated by Draudius (*b*), as an excellent performer on the *violin*. Indeed, Montagne (*i*) says, that in 1580, when he was in Italy, the mass in the great church at Verona was accompanied by organs and *violins*.

AGOS. AGAZZARI, born of a noble family at Siena, a scholar of Viadana, and maestro di capella Apollinare at Rome, according to Quadrio (*k*), was the first who introduced instrumental *concertos* into the church, about the beginning of the last century; but by the word *concerti*, used in the title-page of this work, is only meant *salmi CONCERTATI*, or psalms accompanied with violins.

The word *concerto* first occurs in 1587, in the *Trattenimenti*, or *Divertimenti*, of Scipion Bargagli. And Andrea Gabrieli, organist of St. Mark's church at Venice, published *Ricerari à Quattro*, the *Fantasias* of Italy, in 1589.

SIMONE MOLLINARI, maestro di capella del Duomo, at Genoa, published, in 1605, *Concerti Ecclesiastici*, as they are called; but these, which are in Dr. Aldrich's Collection of Music in Christ-church, Oxon, were only masses and motets, accompanied by instruments, which, about this time, became very common in Italy. Indeed, I was at the trouble of transcribing, in score, one

(*b*) *Bibl. Class.* p. 1612 and 1618.

(*i*) *Journal du Voyage de Mich. de Mon-*

tagne en Italie, Tom. II. p. 555. Rome 1774.

(*k*) *Tom. II. partie 2da.* p. 326.

of the *madrigali concertati* of GIOVANNI ROVETTA, vice maestro di capella of the republic of Venice, and one of the first composers of operas for that city, in order to see how a chorus of six voices, *fugato*, was accompanied; and found the instruments were two violins and a base, wholly different from the voice-parts; but, except an introduction or symphony to each movement, and short ritornels, they had little to do. These madrigals were first published in 1625.

Concertos, merely instrumental, either for the church or chamber, seem to have had no existence, till about the time of Corelli. The honour of the invention has been assigned to Torelli, his contemporary, but from no good authority (1).

It has already been observed, in speaking of English *Fantasias* (page 355), that instruments were first admitted into good company for the purpose of enforcing the voice-parts in the performance of madrigals; and soon after, whenever voices were wanting in private music-meetings, instruments supplied their place, and the madrigals were played, instead of being sung. The next mark of favour conferred upon them, was the composing instrumental parts, different from the vocal, expressly for instruments, as accompaniments to masses and madrigals, which were then said to be *concertati*. Quagliati, Valle's music-master, is said to have first introduced *la musica concertata* into the churches of Rome, in 1606; though, according to Montagne, the voices were accompanied by violins in the church, at Verona, long before that period.

As to *sonatas*, or trios, for two violins and a base, the first that my musical enquiries have discovered, were published by FRANCESCO TURINI, organist of the Duomo, at Brescia, under the following title: *Madrigali à una, due, tre Voci, con alcune SONATE à due & à tre*, Ven. 1624. I was instigated by this early date to score one of these *sonatas*, which consisted of only a single movement, in fugue and imitation throughout; in which so little use

(1) *Six Concertos* for the church, by Alex. Scarlatti, were printed in England by Benjamin Cook in New-street, Covent-garden, early in this century; but when

they were composed is not easy to discover. They were too grave perhaps for any other place than the church; but the fugues, harmony, and modulation, are very fine.

was made of the power of the bow in varying the expression of the same notes, that each part might have been as well played on one instrument as another.

The violin does not appear to have been Turini's instrument, who, besides being an organist, was a deep and learned contrapuntist, and canonist (*m*).

CARLO FARINA, of Mantua, who published *Pavans* and *Sonatas* for the *Violin*, in 1628, was, however, a celebrated performer on that instrument, according to Walther (*n*), in the service of the Elector of Saxony.

MICHEL ANGELO ROSSI, who performed so well on the violin in the part of Apollo in a musical drama at Rome, 1632, has been already mentioned; as well as PIETRO EREDIA, a dilettante, celebrated by Valle for his excellent performance on the violin in the church, for his amusement (*o*). Another performer on that instrument was introduced on the stage at Rome, in an opera called *Amor per Vendetta*, 1673 (*p*).

A *Quartetto*, composed by GREGORIO ALLEGRI, for two violins, tenor, and base, which Kircher has inserted in his *Musurgia*, published 1652, the year when this author of the celebrated *Miserere*, which is constantly performed in the Papal chapel during Passion-week, died, does not manifest any great progress which the *violin tribe* had made towards perfection, about the middle of the last century. The celebrity and importance which this family has acquired, since it may be said to have *got up* in the world, and made so much noise every where, may excite curiosity in its admirers about its manner of *going on*, and *passing its time*, one hundred and thirty years ago, before its offspring had contrived to be invited as pleasant and necessary companions in all places of ceremony, festivity, and amusement. The disposition of the several orders and ranks of this fraternity, as noted down by the learned Kircher, in the infancy of their state, was the following: *Violino primo*, *Violino secondo*, *Alto*, and *Basso di Viola*; an order that is still conti-

(*o*) In the original it is said *per sua DIVOZIONE*.

(*p*) Aggiunte all'atto primo.

nued in their private, as well as public meetings, which may afford some satisfaction to curious enquirers into family-compacts. And it must appear somewhat singular, that though many of this race are of a gigantic size, yet the *great* usually submit to be *led* and governed by the *small*, in every congress or muster, be their numbers ever so considerable.

Though there was only one violin employed in the first operas by Jacopo Peri and Monteverde, yet, as the musical drama improved and the orchestra was augmented, the superiority of that instrument was soon discovered by its effects, not only in the theatre, but in private performances; and the most eminent masters, without knowing much of its peculiar genius or powers, thought it no degradation to compose pieces expressly for the use of its votaries. Among the most early of these productions may be ranked the *Suonate per Chiesa*, of Legrenzi, published at Venice, 1655; *Suonate da Chiesa e camera*, 1656; *Una muta di Suonate*, 1664; and *Suonate à due Violini e Violone*, 1677. Of this last work I am in possession; and, upon scoring it, find, that though Legrenzi has introduced into these pieces some of the best melody of the time, and there is considerable merit in the texture and contrivance of the parts, yet, for want of the knowledge of the bow, or the particular energies and expressions of the violin, these compositions have been long since justly superseded and effaced, by superior productions of the same kind.

Stradella's instrument is said by the Italians to have been the violin; but as none of his pieces expressly composed for that instrument are come to my knowledge, his fame must rest upon his vocal productions, of which an account, character, and specimens, will be given in the chapter concerning the *Sacred Drama* or *Oratorio*. The next composer, therefore, for the violin, and, indeed, the first who seems to have written for it with the spirit and intelligence of a real master of the instrument, seems to be GIAMBATISTA BASSANI, of Bologna, the violin-master of Corelli (*q*). Bassani was a man of extensive knowledge and abilities in his art;

(*q*) The tradition at Rome is, that Corelli had lessons of old Laurenti of Bologna; and being born in the neighbourhood of

that city, where both these masters resided, it is possible he may have received instructions from both.

having

having been not only a successful composer for the church, the theatre, and the chamber, but an excellent performer on the violin, as I was assured by Padre Martini his townsman, who was old enough to have formed his opinion from those who had often heard him perform. And, indeed, his sonatas for the violin, and accompaniments for that instrument to his masses, motets, psalms, and cantatas, manifest a knowledge of the finger-board and bow, which appears in the works of no other composer, anterior to Corelli, which I have been able to find; and the lovers of the pure harmony and simple melody of that admirable master would still receive great pleasure from the performance of Bassani's sonatas for two violins and a base; in which they would hear, not only the general musical language of the time, but the mild accents and particular tones of Corelli's own mellifluous voice.

Though GIUSEPPE TORELLI, of Verona, was an eminent performer on the violin, and a voluminous composer for that instrument, during the latter end of the last century, his productions for that instrument are now so superannuated, as almost to cease to be Music; for having little original melody, and no uncommon stock of harmony or modulation, there is nothing left to make amends for the want of novelty and elegance. This author, who was a member of the Philharmonic Academy at Bologna, and first violin of the church of San Petronio in the same city, published seven different works for violins, and left behind him an eighth opera, which was published in 1709 by his brother, Felice Torelli, after the author's decease, under the title of *Concerti grossi con una pastorale per il santissimo natale*, consisting of twelve concertos in eight parts, which has been thought the best of his works, and the model of grand concertos for a numerous band (r).

About the same time, GIUSEPPE VALENTINI, among other composers, *à dozzina*, published, in Holland, nine different works for violins; the seventh and last of which were, *Concerti Grossi*, for four violins, tenor, and two bases; but they have been long

(r) Quantz; *Arte de la Flute*, ch. xviii. § 30 & 58.

since consigned to oblivion, without any loss to the public, or injustice to the author.

ANTONIO VERACINI, uncle and master to Francesco Maria Veracini, the celebrated performer on the violin, published, at Florence in 1692, *Ten Sonatas*, the usual number, till Corelli's time; and, afterwards, *Sonate da Chiesa*, two sets; but this author not being possessed of the knowledge, hand, or caprice of his nephew, his works are now not sufficiently interesting to merit any further notice here.

We are now arrived at a memorable æra for the *violin*, *tenor*, and *violoncello*; when the works and performance of the admirable ARCANGELO CORELLI rendered them respectable, and fixed their use and reputation, in all probability, as long as the present system of Music shall continue to delight the ears of mankind. Indeed, this most excellent master had the happiness of enjoying part of his fame during mortality; for scarce a cotemporary musical writer, historian, or poet, neglected to celebrate his genius and talents; and his productions have contributed longer to charm the lovers of Music by the mere powers of the bow, without the assistance of the human voice, than those of any composer that has yet existed. Haydn, indeed, with more varied abilities, and a much more creative genius, when instruments of all kinds are better understood, has captivated the musical world in, perhaps, a still higher degree; but whether the duration of his favour will be equal to that of Corelli, who reigned supreme in all concerts, and excited undiminished rapture full half a century, must be left to the determination of time, and the increased rage of depraved appetites for novelty.

Corelli was born at Fusignano, near Imola, in the territory of Bologna, in February 1653. He is said, by Adami (s), to have received his first instructions in counterpoint from Matteo Simonelli of the Papal chapel; and the general opinion is, that his master on the violin was *Giambatista Bassani*, of Bologna. It has been said (t), without authority, that Corelli went to Paris in the year 1672, but was soon driven thence by the jealousy and violence

(s) *Ubi supra*, p. 209.

(t) *Life of Handel*, 1760, p. 46.

of Lulli. That he visited Germany, after he had finished his studies, we are assured by Gaspar Printz (*u*), who informs us, that he was in the service of the Duke of Bavaria, in 1680. Soon after this period, he seems to have returned to Italy, and settled at Rome, where, about 1683, he published his first *Twelve Sonatas*. In 1685, the second set appeared, under the title of *Balletti da Camera*, which, the same year, gave rise to a controversy between the author and Paolo Colonna, concerning the diatonic succession of fifths, between the first treble and the base of the allemand in the second sonata, as has been mentioned elsewhere. In 1690, Corelli published the third opera of his sonatas; and in 1694, the fourth, which consisting of movements fit for *dancing*, like the second, he called *Balletti da Camera*.

3^d of 2^d book

In the works of the poet Guidi, published at Verona, 1726, it is recorded that, in 1686, when our King James II. piously sent an ambassador to Pope Innocent XI. to make a tender of his duty as a faithful son of the Romish church, at a grand academia which Christina Queen of Sweden, then a proselyte, and resident in the *Alma Citta di Roma*, gave on the occasion, the Music was composed by *Bernardo Pasquini*, and the band, amounting to one hundred and fifty performers on bowed-instruments, *instrumenti d' arco*, led by Arcangelo Corelli.

About this time, when the opera was in a very flourishing state at Rome, Corelli led the band, as principal violin (*x*).

But his solos, the work by which he acquired the greatest reputation during his life time, did not appear till the year 1700, when they were published at Rome, under the following title: *Sonate à Violino, e Violone, ò Cembalo, Opera quinta, Parte prima, Parte seconda, Preludii, Allemande, Corrente, Gighe, Sarabande, Gavotte, e Follia*. This work was dedicated to *Sophia Charlotta*, Electress of Brandenburg. His great patron at Rome was Cardinal Ottoboni, the general encourager of polite arts and learning, to whom, in 1694, he dedicates his *Opera Quinta*, and in whose palace he constantly resided, *col spetiosa carattere d'attuale servitore* of his eminence, as he expresses himself in the dedication.

(*u*) Satyr. Composit, 3ten. Gheil. p. 227. (*x*) See above, p. 58.

Crescimbeni (y), speaking of the splendid and majestic *academia*, or concert, held at Cardinal Ottoboni's every Monday evening, says, that this performance was regulated by Arcangelo Corelli, that most eminent professor of the violin: *famosissimo professore di violino*.

In 1708, we have an honourable testimony of his high rank in the profession, given at Venice in the first edition of the *Armonico pratico al Cembalo*, by Francesco Gasparini, who calls him, *virtuosissimo di violino, e vero Orfeo di nostro tempo* (z). And Adami, in speaking of Simonelli, Corelli's first master in counterpoint, says, that he made many scholars, "among whom, the most celebrated was the famous Corelli, the chief glory of the age, with the fame of whose five works, already published, the world is filled; and the sixth, consisting of concertos, which he is now (1711) polishing for the press, will complete his immortality (a)."

A very particular and intelligent friend, upon whose judgment and probity I have a most perfect reliance, having had a conversation with Geminiani about five or six years before his death, and a friend of his at that time having had in meditation the writing a history of Music, he committed to paper, when he got home, the chief particulars of this conversation, supposing they might be of some use to his friend; but as the plan he had in view has been long laid aside, I have been favoured with the anecdotes and particulars that were obtained from Geminiani, which, as they chiefly concern Corelli, and were communicated by one of his most illustrious scholars, who heard and saw what he relates, I shall insert them here.

"At the time that Corelli enjoyed the highest reputation, his fame having reached the court of Naples, and excited a desire in the King to hear him perform; he was invited, by order of his Majesty, to that capital. Corelli, with some reluctance, was at length prevailed on to accept the invitation; but, lest he should

(z) Cap. VII.

(a) *Di cui parla, e parlerà sempre la fama in cinque opere date da esso alla stampe,*

che son la maraviglia del mondo tutto, e presentemente sta perfezionando l'opera sesta de i concerti, che in breve darà alla luce, e con essa si renderà sempre più immortale il suo nome. p. 209.

not be well accompanied, he took with him his own second violin and violoncello. At Naples he found Aleffandro Scarlatti, and several other masters (b), who entreated him to play some of his concertos before the King; this he for some time declined, on account of his whole band not being with him, and there was no time, he said, for a rehearsal. At length, however, he consented; and in great fear performed the first of his concertos. His astonishment was very great to find that the Neapolitan band executed his concertos almost as accurately at sight, as his own band, after repeated rehearsals, when they had almost got them by heart. *Si suona*, (says he to Matteo, his second violin) *à Napoli!*

“After this, being again admitted into his Majesty’s presence, and desired to perform one of his sonatas, the King found one of the adagios so long and dry, that being tired, he quitted the room, to the great mortification of Corelli. Afterwards, he was desired to lead in the performance of a masque composed by Scarlatti, which was to be executed before the King; this he undertook, but from Scarlatti’s little knowledge of the violin, the part was somewhat awkward and difficult: in one place it went up to F; and when they came to that passage, Corelli failed, and was unable to execute it; but he was astonished beyond measure to hear Petrillo, the Neapolitan leader, and the other violins, perform that which had baffled his skill. A song succeeded this, in C minor, which Corelli led off in C major; *ricominciamo*, said Scarlatti, good-naturedly. Still Corelli persisted in the major key, till Scarlatti was obliged to call out to him, and set him right. So mortified was poor Corelli with this disgrace, and the general bad figure he imagined he had made at Naples, that he stole back to Rome in silence.

“It was soon after this, that a hautbois player, whose name Geminiani could not recollect, acquired such applause at Rome, that Corelli, disgusted, would never play again in public. All these mortifications, joined to the success of Valentini, whose concertos and performance, though infinitely inferior to those of

(b) This must have happened about the year 1708; as it appears, that Scarlatti was settled at Rome from 1709 to the time

of his decease. Corelli’s concertos appear to have been composed many years before they were published.

Corelli, were become fashionable, threw him into such a state of melancholy and chagrin, as was thought, said Geminiani, to have hastened his death."

This account of Corelli's journey to Naples is not a mere personal anecdote, as it throws a light upon the comparative state of Music at Naples and at Rome in Corelli's time, and exhibits a curious contrast between the fiery genius of the Neapolitans, and the meek, timid, and gentle character of Corelli, so analagous to the style of his Music.

In 1712, his concertos were published in a beautiful edition, engraved at Amsterdam by Estienne Roger and Michael Charles le Cene, and dedicated to John William, prince palatine of the Rhine; but, alas! the author survived the publication of this admirable work but six weeks; the dedication bearing date at Rome the 3d day of December 1712, and he died on the 18th of January 1713!

He was buried in the church of the Rotunda or Pantheon, in the first chapel on the left hand of the entrance of that beautiful temple, where a monument, with a marble bust on it, was erected to his memory, near that of the great painter Raphael, by Philip William, count palatine of the Rhine, under the care of Cardinal Ottoboni; on which is the following inscription:

 OBIT IV. ID. JANUARIJ ANNO SAL. MDCCXIII.

During

During many years after his decease, there was a kind of commemoration of this admirable musician in the Pantheon, by a solemn service, consisting of pieces selected from his own works, and performed by a numerous band, on the anniversary of his funeral. A solemnity which continued as long as his immediate scholars survived, to conduct and perform in it. The late Mr. Wiseman, who arrived at Rome before the discontinuance of this laudable custom, assured me that his works used to be performed, on this occasion, in a slow, firm, and distinct manner, just as they were written, without changing the passages in the way of embellishment. And this, it is probable, was the way in which Corelli himself used to play them.

Of the private life and moral character of this composer, little new information can now be acquired or expected; but of we may judge of his equanimity and natural disposition by the mildness, sweetness, and even tenor of his musical ideas, his temper must have endeared him to all his acquaintance, as much as his talents.

Indeed, the account that is given, of his dying worth £. 6000, besides a valuable collection of pictures, and bequeathing them all to his patron Cardinal Ottoboni, does more honour to his parsimony and gratitude, than judgment; a musician leaving money to a cardinal, while he had a relation or necessitous friend in the world, seems to favour more of vanity than true generosity. And the cardinal, himself, manifested his opinion of this bequest, by keeping only the pictures, and distributing the rest of Corelli's effects among his poor relations, to whom they naturally appertained.

To attempt to give a character here of Corelli's compositions, which have been so long heard and universally admired, may to many of my readers appear wholly useless; yet as they are thrown aside as antiquated lumber by some, and regarded as models of perfection by others, my wish to rank each musician in his true place, with equity and fairness, inclines me to make a few reflexions on the genius and works of this master, before I quit the subject.

As Corelli originally stiled the second and fourth opera of his sonatas, *Balletti da Camera*, from the dancing and familiar movements

ments contained in them ; the first and third set, from their gravity of style and movement, may be called *Sonate da Chiesa*. The same distinction may be made with propriety in his concertos, and even solos ; the first eight of the former, and six of the latter, being much more solemn and ecclesiastical than the rest.

With regard to the intrinsic worth of his four books of sonatas at present, notwithstanding the exquisite pleasure they may have afforded myself and others of my age, during youth, it is very much diminished by the general improvement of melody, knowledge of the bow, and boldness of modulation, which have freed invention from former shackles, and generated new ideas and effects. Indeed, during the time of Corelli, and long after, every one who knew the mechanical laws of harmony, however ignorant of the violin, set about composing sonatas, solos, and concertos, for it ; but the great masters of that instrument, whose genius and invention have kept pace with their hand, have now nearly crushed all such insipid and impotent attempts.

Corelli's *Solos*, as a classical book for forming the hand of a young practitioner on the violin, has ever been regarded as a most useful and valuable work, by the greatest masters of that instrument. I was told by Mr. Wiseman at Rome, that when he first arrived in that city, about twenty years after Corelli's decease, he was informed by several persons who had been acquainted with him, that his *opera quinta*, on which all good schools for the violin have been since founded, cost him three years to revise and correct. Tartini formed all his scholars on these solos ; and Signor Giardini has told me, that of any two pupils of equal age and disposition, if the one was to begin his studies by Corelli, and the other by Geminiani, or any other eminent master whatever, he is sure that the first would become the best performer.

The *Concertos* of Corelli seem to have withstood all the attacks of time and fashion with more firmness than any of his other works. The harmony is so pure, so rich, and so grateful ; the parts are so clearly, judiciously, and ingeniously disposed ; and the effect of the whole, from a large band, so majestic, solemn, and sublime, that
they

preclude all criticism, and make us forget that there is any other Music of the same kind existing.

Geminiani, according to my friend's memorandums, whence an extract has already been given, asserted that "Corelli availed himself much of the compositions of other masters, particularly of the masses in which he played at Rome (c); that he acquired much from Lulli, particularly the method of modulating in the *legatura* (d), and from Bononcini's famous *Camilla*."

Geminiani's character of Corelli, upon the whole, seems very just: he said, that "his merit was not depth of learning, like that of Aleffandro Scarlatti; nor great fancy, or rich invention in melody or harmony; but a nice ear and most delicate taste, which led him to select the most pleasing harmonies and melodies, and to construct the parts so as to produce the most delightful effect upon the ear." At the time of Corelli's greatest reputation, Geminiani asked Scarlatti what he thought of him; who answered, that "he found nothing greatly to admire in his composition, but was extremely struck with the manner in which he played his concertos, and his nice management of his band, the uncommon accuracy of whose performance, gave the concertos an amazing effect; and that, even to the eye as well as the ear:" for, continued Geminiani, "Corelli regarded it as essential to the *ensemble* of a band, that their bows should all move exactly together, all up, or all down; so that at his rehearsals, which constantly pre-

(c) With these masses I am unacquainted; but I find frequent imitations of the more natural passages of Scarlatti, particularly in the beautiful adagio of his eighth concerto,

in which there is a great resemblance to a movement in a cantata which was set by Scarlatti in 1704, eight years prior to the publication of Corelli's concertos.

(d) This was not very intelligible. Nor does the charge appear well founded; as Lulli has made but little use of the *legatura*.

ceded every public performance of his concertos, he would immediately stop the band if he discovered one irregular bow."

There seems some justice in Geminiani's opinion, that Corelli's continual recourse to certain favourite passages betrays a want of *resource*. They were so many *bar rests* for his invention. All the varieties of Corelli harmony, modulation, and melody, might perhaps be comprised in a narrow compass. The musical index to his works would not be long.

Indeed, Corelli was not the inventor of his own favourite style, though it was greatly polished and perfected by him. Torelli's concertos, though posthumous, were published three years before those of Corelli; and we know not how long they had been composed, or how often performed, previous to publication.

For a model of his graver sonatas in the first and third set, he certainly had those of Bassani in his mind; and for the lighter sort, he had many models. His solos seem drawn from his own source more entirely than any of his other productions.

There was little or no melody in instrumental Music before Corelli's time. And though he has much more grace and elegance in his *cantilena* than his predecessors, and slow and solemn movements abound; yet true pathetic and impassioned melody and modulation, seem wanting in all his works. He seems to have been gifted with no uncommon powers of execution; yet, with all his purity and simplicity, he condescended to aim at difficulty, and manifestly did all he could in rapidity of finger and bow, in the long unmeaning allegros of his first, third, and sixth solos; where, for two whole pages together, common chords are broken into common divisions, all of one kind and colour, which nothing but the playing with great velocity and neatness could ever render tolerable. But like some characters and indecorous scenes in our best old plays, these have been long omitted in performance.

Indeed, his knowledge of the powers of the bow, in varying the expression of the same notes, was very much limited. Veracini and Tartini greatly extended these powers; and I well remember my pleasure and astonishment in hearing Giardini, in a solo that

he

he performed at the oratorio, 1769, play an air at the end of it with variations, in which, by repeating each strain with different bowing, without changing a single note in the melody, he gave it all the effect and novelty of a new variation of the passages.

However, if we recollect that some of Corelli's works are now more than a hundred years old, we shall wonder at their grace and elegance; which can only be accounted for on the principle of ease and simplicity. Purcell, who composed for ignorant and clumsy performers, was obliged to write down all the fashionable graces and embellishments of the times, on which account, his Music soon became obsolete and old fashioned; whereas the plainness and simplicity of Corelli have given longevity to his works, which can always be modernised by a judicious performer, with very few changes or embellishments. And, indeed, Corelli's productions continued longer in unfading favour in England than in his own country, or in any other part of Europe; and have since only given way to the more fanciful compositions of the two Martini's, Zannetti, Campioni, Giardini, Abel, Schwindl, Boccherini, Stamitz, Haydn, and Pleyel.

After the publication of Corelli's works, the violin seems to have increased in favour all over Europe. There was hardly a town in Italy, about the beginning of the present century, where some distinguished performer on that instrument did not reside: as COSTANTINO CLARI, an admirable composer of vocal duets and trios, at Pisa; FRANCESCO VERACINI, already mentioned, at Florence; GIROLAMO LAURENTI, at Bologna; ANTONIO VITALI, at Modena; COSIMO PERELLI, and FRANCESCO CIAMPI, at Massa Carrara; LOMBARDI, at Lucca; VISCONTI, at Cremona; MARTINO BITTI, at Florence; GIACOPINO DI PISTOIA, at Pistoia; and MICHELE MASCITTI, at Naples. These all published Music, of some kind or other, for the violin, as may be seen in the Dutch catalogues, and in Walther's Musical Dictionary.

To these may be added NICOLA COSIMO, *Romano*, of whom there is a mezzotinto print, by J. Smith, from Sir Godfrey Kneller. This musician was in England 1702, when he published

Twelve Solos, in long quarto, which he dedicated to the Duke of Bedford, by whom he had been patronised at Rome. The solos have considerable merit, for the time. It appears, however, that he was of Corelli's school, and had seen his opera quinta, published in 1700. The print is dated 1706, and dedicated to Lord Baltimore, with Latin encomiastic verses on Cosimo, who appears a young man, in spite of the immense peruque through which he is peeping. The solos are finely engraved on copper in the Dutch manner, and were probably printed in Holland.

FRANCESCANTONIO BUONPORTI, a nobleman of the city of Trent, published between the year 1702 and 1714, ten different works, chiefly for violins.

But besides these, of whom little is known in England, GIUSEPPE MATTEO ALBERTI, first violin of the church of St. Petronio, of Bologna, where Torelli, Laurenti, and Bassani had been before, published, in 1713, Ten Concertos, in six Parts, for Violins; and a few years after, Twelve *Sinfonie à 4*. These being slight and easy, were much played in England, about fifty years ago, particularly in provincial concerts. As were the concertos of ALBINONI and TESSARINI, for the same reason.

TOMMASO ALBINONI, of Venice, who has been already mentioned, as the composer of thirty-three operas for that city between the year 1694 and 1730, being an excellent performer on the violin, published in the beginning of the present century, besides several vocal productions, nine different works for instruments, chiefly concertos and sonatas for violins, with which in speaking of concertos the *tenor* is understood, and in both concertos and sonatas, the violoncello. Caldara published about the year 1722, two sets of sonatas for two violins and base, in the first set of which the violoncello was *obligato*; whence it has been imagined by Walther, who never saw them any more than myself, that the violoncello was Caldara's particular instrument.

CARLO TESSARINI, a violinist of Rimini, published in Holland twelve concertos for a violino principale, with two *ripienes*, *violetta*, violoncello, and basso continuo.

But the most popular composer for the violin, as well as player on that instrument, during these times, was DON ANTONIO VIVALDI, maestro di capella of the Conservatorio della Pietà, at Venice; who, besides sixteen operas which he set for the Venetian theatres, and several others for different parts of Italy, between the year 1714 and 1737, published eleven different works for instruments, of which a list is given in Walther, without including his pieces called *Stravaganze*, which among flashy players, whose chief merit was rapid execution, occupied the highest place of favour. His *Cuckoo Concerto*, during my youth, was the wonder and delight of all frequenters of country concerts; and *Woodcock*, one of the Hereford waits, was sent for far and near to perform it. If acute and rapid tones are evils, Vivaldi has much of the sin to answer for (e). His title of *Don* was derived from his clerical character. "It is very usual," says Mr. Wright in his *Travels through Italy*, from 1720 to 1722, "to see priests play in the orchestra. The famous Vivaldi, whom they call the *Prete Rosso*, very well known among us for his concertos, was a topping man among them at Venice."

Albinoni, Alberti, Tesserini, and Vivaldi are, however, classed among the light and irregular troops; the Roman school, formed by Corelli, having produced the greatest performers and composers for the violin which Italy could boast during the first fifty years of the present century.

GEMINIANI, one of the most distinguished of his scholars, having arrived here in 1714, the year after Corelli's decease, and spent the chief part of his subsequent life in this kingdom, will have an honourable niche assigned him in that part of my work where the musical transactions of our own country, in which he had any concern, are recorded.

LORENZO SOMIS, maestro di capella to the King of Sardinia, was regarded in Italy as of Corelli's school, a little modernised, after

(e) Geminiani used to claim the invention of the half-shift on the violin, and he probably first brought it to England; but

the Italians ascribed it to Vivaldi; and others to the elder Mateis, who came hither in King William's time.

the model of Vivaldi. He printed at Rome, in 1722, his *Opera prima di Sonate a Violino, e Violoncello, o Cembalo*, which are very much in the style of Corelli; some of them with double stopt fugues, like those of his model, and some without. He was regarded as one of the greatest masters of his instrument of his time; but his chief professional honour is the having formed among his scholars such a performer as GIARDINI. Chabran was likewise another of his pupils.

We are now arrived at the admirable GIUSEPPE TARTINI, who was so ambitious of being thought a follower of Corelli's precepts and principles, that after his own reputation was at its zenith, he refused to teach any other Music to his disciples, till they had studied the *Opera quinta*, or Solo's, of Corelli. PASQUALE BINI, one of his favourite scholars, by that means became nearly as good a player as himself. The late Mr. Wiseman, of Rome, acquainted me, that, by the recommendation of Tartini, he took lessons of Bini, himself, in the year 1738. He had often heard Tartini, and assured me, that of all the players he ever remembered, his *adagio* was the most *cantabile* and divine: "happy was the scholar," cried he, "who could catch any particle of his manner! which seemed a supernatural gift. He formed the greatest school that the musical world had ever known." Among the principal of his disciples, he named Pasquale Bini, of Pesaro; Paolo Alberghi, of Faenza; and Pietro Nardini, of Florence. M. Pagen of Paris, and Cherminati of Lyons, were likewise his scholars, as were several eminent performers in Germany. These likewise formed scholars of great abilities, which contributed to spread his reputation and manner of playing all over Europe. Nazzari, of Venice, was the pupil of Cherminati; Catena di Urbino, of Alberghi; and Manfredi, of Nardini. FERRARI, of Cremona, was the immediate scholar of Tartini; but afterwards formed a style of his own, with the addition of the *sons harmoniques* and long passages, *all' ottava*.

Tartini's first master was an obscure musician of the name of Giulio di Terni, who afterwards changed places with Tartini, and became

became his scholar. This circumstance Mr. Wiseman had from Tartini himself, who used to say that he studied very little till after he was thirty years of age. He changed his style in 1744, from extreme difficult, to graceful and expressive.

His favourite scholars were Pasqualino Bini and Nardini. Bini was recommended to him at the age of fifteen, by Cardinal Olivieri; and finding him not only a youth of a happy disposition for Music, but of excellent morals, he had a very great affection for him. This young musician practised with such assiduity, that in three or four years time, he vanquished the most difficult of Tartini's compositions, and played them with greater force than the author himself. When he had finished his studies, his patron, Cardinal Olivieri, took him to Rome, where he astonished all the professors by his performance, particularly MONTANARI, at that time the principal performer on the violin at Rome; and it was generally believed, that Montanari was so mortified by the superiority of his talents, that he died of grief.

Pasqualino having been informed that Tartini had changed his style and taste in playing, returned to Padua, where he placed himself for another year under that excellent and worthy master; at the end of which period, so intense had been his application, that he played with a certainty and expression which were wonderful. It was after his return to Rome that Tartini recommended Mr. Wiseman to him as a scholar, in the precise following words, which will serve as a specimen of this great master's modest and ingenuous disposition: *Io lo mando a un mio scolare che suona più di me, e me ne glorio per essere un angelo di costume e religioso.* "I recommend him (Mr. Wiseman) to a scholar who plays better than myself, and I am proud of it, as he is an angel in religion and morals." A character which, Mr. Wiseman assured me, was exactly conformable to truth.

Of Tartini's life and works, many particulars, which I collected at Padua immediately after his decease, are given in my Italian Tour, or account of *The present State of Music in France and Italy*; and I should with pleasure add many more, if I was not fearful of tiring

tiring readers less interested about him than myself; some, however, I cannot resist relating, as due to his merit and character.

Giuseppe Tartini was born at Pirano, in the province of Istria, in April 1692. His father having been a great benefactor to the cathedral church at Parenzo, had been ennobled in reward for his piety. Giuseppe was intended for the law, but mixing Music with his other studies during the course of his education, it soon grew too powerful for the rest, and tyrannised over the whole circle of sister sciences. This is not so surprising as another strong propensity, which during his youth occupied his attention very much, which was *fencing*, an art that was not likely to become necessary to the safety or honour of a man of so pious and pacific a disposition, in a civil employment; and yet he is said to have equalled in this art even the master from whom he received instructions. In 1710, he was sent to the university of Padua to pursue his studies as a civilian; but before he was twenty, having married without the consent of his parents, they wholly abandoned him, and obliged him to wander about in search of an asylum; which, after many hardships, he found in a convent at Assisi, where he was received by a monk his relation, who, commiserating his misfortunes, let him remain there till something better could be done for him. Here he practised the violin to keep off melancholy reflections; but being discovered on a great festival in the orchestra of the church of the convent by the accident of a remarkable high wind, which forcing open the doors of the church blew aside the curtain of the orchestra and exposed all the performers to the sight of the congregation; when being recognised by a Paduan acquaintance, differences were accommodated, and he settled with his wife at Venice for some time. This lady, indeed, was of the Xantippe kind, and being himself very Socratic in wisdom, virtue, and patience, her reign was unmolested by any domestic war, or opposition to her supremacy.

While he was at Venice, the celebrated Veracini arrived in that city, whose performance awakened an extraordinary emulation in Tartini, who, though he had been thought to have a powerful hand, had
never

never heard a great player before, or conceived it possible for the bow to have such varied powers of energy and expression. He therefore quitted Venice the next day, and went to Ancona, in order to study the use of the bow in more tranquillity, and with more convenience than at Venice, as he had a place assigned him in the opera orchestra of that city.

This happened in the year 1714, the year in which he discovered the phenomenon of the third sound. It was here too, and in the carnival of the same year, that he heard and perceived the extraordinary effects of a piece of simple recitative, which he mentions in his *Trattato di Musica*. It was during his residence at Ancona, that, by diligent study and practice, he acquired sufficient abilities and reputation to be invited, in 1721, to the place of first violin, and master of the band in the celebrated church of St. Anthony of Padua.

By this time, his fame was so extended that he had repeated invitations from Paris and London to visit those capitals; but by a singular devotion and attachment to his patron saint, to whom he consecrated himself and his instrument, he declined entering into any other service.

By the year 1728, he had made many excellent scholars, and formed a school, or method of practice, for the students on the violin, that was celebrated all over Europe, and which increased in fame to the end of his life.

The author of the compendium of his life (f) informs us that his first book of solos was engraved at Amsterdam 1734; the second at Rome 1745, and that he produced above two hundred of these compositions, which were handed about in manuscript by the curious; but does not seem to know that nine or ten books of Tartini's solos were printed at Paris, of which I am in possession of opera third, sixth, seventh, and ninth, besides the two books printed in England, amounting to upwards of fifty solos, exclusive of manuscripts.

Of his concertos, which likewise amount to two hundred, this author gives a very unsatisfactory account; he says that a surrep-

(f) *Compendio della Vita di Giul. Tartini*, 1770.

titious

titious copy of two sets having first appeared in Holland, he would never own them. The first six seem to have been composed in his first manner before he changed his style; and I find them mentioned in Dutch catalogues before the year 1740. The second six are more modern, and were manifestly composed in his second and best manner, after the year 1744, when he is said to have changed his style. They were collected, as Le Cene confesses, from different people who had obtained copies from the author, and there seems not the least doubt of their being genuine.

Though Tartini's compositions always afforded me great pleasure, and were never obliterated from my memory, yet as they are now as much laid aside as those of Bassani or Locatelli, I thought it right to give them a revision before I ventured my sentiments concerning their merit.

Tartini, on a recent examination of his works, seems, to my feelings and conceptions, to have had a larger portion of merit as a mere instrumental composer than any other author who flourished during the first fifty or sixty years of the present century. Though he made Corelli his model in the purity of his harmony, and simplicity of his modulation, he greatly surpassed that composer in the fertility and originality of his invention; not only in the subjects of his melodies, but in the truly cantabile manner of treating them. Many of his adagios want nothing but words to be excellent pathetic opera songs. His allegros are sometimes difficult; but the passages fairly belong to the instrument for which they were composed, and were suggested by his consummate knowledge of the finger-board, and powers of the bow. He certainly repeats his passages, and adheres to his original *motivo*, or theme, too much, for the favourite desultory style of the present times; but it must be allowed that by his delicate selection and arrangement of notes, his passages are always good; play them quick or play them slow, they never seem unmeaning or fortuitous.

Indeed, as a harmonist, he was perhaps more truly scientific than any other composer of his time, in the clearness, character, and precision of his bases; which were never casual, or the effect of habit

habit or auricular prejudice and expectation, but learned, judicious, and certain. And yet, with all my partiality for his style, talents, and abilities, as well as veneration for his principles and character, I must, in justice to others, own, that though the adagio and solo-playing, in general, of his scholars are exquisitely polished and expressive, yet it seems as if that energy, fire, and freedom of bow, which modern symphonies and orchestra-playing require, were wanting. It is now (1788) eighteen years since I visited Italy, and gave my opinions of what then subsisted, with all the fairness and freedom possible; but since that time, the productions of Boccherini, Haydn, Pleyel, Vanhal, and others, have occasioned such a revolution in violin-music, and playing, by the fertility and boldness of their invention, that compositions which were then generally thought full of spirit and fire, appear now totally tame and insipid.

This admirable musician and worthy man died the 26th of February 1770, to the great regret of the inhabitants of the city of Padua, where he had resided near fifty years, and where he was not only regarded as its chief and most attractive ornament, but philosopher, saint; and sage.

As Tartini, besides his practical excellence, deservedly merits a place among the ingenious theorists of the present age, we shall reserve the consideration of his writings on the art for another part of this work.

FRANCESCO MARIA VERACINI, and Tartini, his cotemporary, were regarded as the greatest masters of their instrument that had ever appeared; and their abilities were not merely confined to the excellence of their performance, but extended to composition, in which they both manifested great genius and science. But whatever resemblance there may have been in the professional skill of these two masters, it was impossible for any two men to be more dissimilar in disposition: Tartini was so humble and timid, that he was never happy but in obscurity; while Veracini was so foolishly vain-glorious as frequently to boast that there was but *one God*, and *one Veracini*.

Being at Lucca at the time of *la Festa della Croce*, which is celebrated every year on the 14th of September, when it is customary for the principal professors of Italy, vocal and instrumental, to meet, Veracini entered his name for a solo concerto; but when he went into the choir, in order to take possession of the principal place, he found it already occupied by Padre Girolamo Laurenti, of Bologna; who not knowing him, as he had been some years in Poland, asked him where he was going? Veracini answered, to the place of first violin. Laurenti then told him, that he had been always engaged to fill that post himself; but that if he wished to play a concerto, either at vespers, or during high mass, he should have a place assigned him. Veracini, with great contempt and indignation, turned his back on him, and went to the lowest place in the orchestra. In the act or part of the service in which Laurenti performed his concerto, Veracini did not play a note, but listened with great attention. And being called upon, would not play a concerto, but desired the hoary old father would let him play a solo at the bottom of the choir, desiring Lanzetti, the violoncellist of Turin, to accompany him; when he played in such a manner as to extort an *e viva!* in the public church. And whenever he was about to make a close, he turned to Laurenti, and called out: *Così si suona per fare il primo violino*: "this is the way to play the first fiddle." Many silly stories of this kind are handed about Italy concerning the caprice and arrogance of this performer, who was usually qualified with the title of *Capo pazzo*.

Veracini would give lessons to no one except a nephew, who died young. The only master he had himself in his youth, was his uncle, Antonio Veracini, of Florence; but by travelling all over Europe he formed a style of playing peculiar to himself. Besides being in the service of the King of Poland, he was a considerable time at different courts of Germany, and twice in England, where, during the time of Farinelli, he composed several operas (g). I saw and

(g) *Adriano*, in the winter of 1735 and 1736, had a run of twelve nights. *L'Errore di Salomone*, 1744, in which Monticelli performed.

heard

heard him perform in the year 1745, at Hickford's room, where, though in years, he led the band at a benefit concert for Jozzi, the second singer at the opera, in such a bold and masterly manner as I had never heard before. Jozzi, besides being an opera singer, was likewise a celebrated performer on the harpsichord; and executed at his benefit several of Alberti's lessons, which he passed for his own, with a neatness and precision that were quite new in England at that time. Soon after this, Veracini was shipwrecked, and lost his two famous Steiner violins, thought to have been the best in the world, and all his effects. He used to call one of his violins St. Peter, and the other St. Paul.

As a composer he had certainly a great share of whim and caprice, but he built his freaks on a good foundation, being an excellent contrapuntist. The peculiarities in his performance were his bow-hand, his shake, his learned arpeggios, and a tone so loud and clear, that it could be distinctly heard through the most numerous band of a church or theatre.

Veracini and Vivaldi had the honour of being thought mad for attempting in their works and performance what many a sober gentleman has since done uncensured; but both these musicians happening to be gifted with more fancy and more hand than their neighbours, were thought insane; as friar Bacon, for superior science, was thought a magician, and Galileo a heretic.

Among the violin players of the old school, it would be unjust not to bestow a few words on my late friend EMANUELE BARBELLÀ, of Naples. Of this agreeable artist's musical abilities and singularities of character, an account has been given in my Italian Tour, where I have confessed my obligations to him for much useful information concerning the musical establishments at Naples, particularly the *conservatorios*, and for lists of the principal masters and scholars of those eminent musical seminaries. Besides the intelligence with which he favoured me in that city relative to my musical enquiries, in conversation, and in dictating answers to my questions while I wrote them down, he corresponded with me in London, and continued, till the time of his death, communicating to me, by letter,

several other particulars of the Neapolitan school, a considerable time after my return to England; and among other things complied with my request of giving me an account of his own musical education, of which, as it is short and characteristic, I shall here insert a translation.

“EMANUELE BARBELLA had the violin placed in his hand when he was only six years and a half old, by his father, Francesco Barbella. After his father's decease he took lessons of Angelo Zaga, till the arrival of Pasqualino Bini, a scholar of Tartini, in Naples, under whom he studied for a considerable time, and then worked by himself. His first instructor in counterpoint was Michele Gabbalone; but this master dying, he studied composition under the instructions of Leo, till the time of his death; and pleasantly adds: *Non per questo, Barbella, è un vero asino che non sa niente*: “Yet, notwithstanding these advantages, Barbella is a mere ass, who knows nothing.”

This modest ingenious musician, and true follower of Tartini's principles, died at Naples 1773. And as a small memento, I shall, on the following plates, insert a *Tinna nonna*, or *Lullaby*, of his composition, which he was famous for playing among his particular friends; for though he seemed never to have had sufficient force to lead an orchestra, his tone and manner were marvellously sweet and pleasing in a room, even without any other accompaniment than the drone-base of an open string. His worthy disciple, Signor Raimondi, with more force in public, has the same sweetness of tone and temper, in private.

At the end of Barbella's *Tinna Nonna*, the musical reader will find Tartini's notation of the *Aria du Tasso*, as sung by the Gondolieri at Venice; with an *Aria Lecefe*, by Leo.

TINNA NONNA

Tinna nonna, per prender sonno.

del Barbella.

571

Larghetto.
Sempre legato e sotto voce.

The musical score is written on eight systems of two staves each. The first system includes the tempo marking 'Larghetto.' and the performance instruction 'Sempre legato e sotto voce.' The notation includes various note values, rests, and dynamic markings such as 'F' (forte) and 'P' (piano). The score is written in a style typical of 18th or 19th-century manuscript notation.

Aria del Tasso.

di Tartini.

Aria, alla Lese.

di Leo

The celebrated PIETRO LOCATELLI, of Bergamo, who was long resident in Holland, had more hand, caprice, and fancy, than any violinist of his time. He was a voluminous composer of Music that excites more surprise than pleasure.

FERRARI, who died young in his way to England, is one of the few great performers on the violin, of my own time, whom I have not heard. Fame was loud in his praise, and by the solos he composed, of which two books were printed in London, he seems to have been possessed of a powerful hand, and to have been by no means deficient in genius for composition.

BATTISTA SAN MARTINI, of Milan, though the violin does not seem to have been his instrument, produced for it an incredible number of spirited and agreeable compositions, between the year 1740 and 1770, when I saw him at Milan; at which time he was maestro di capella to more than half the churches in that city, for which he furnished masses upon all the great festivals. He was brother to the celebrated player on the hautbois, whose performance and compositions were so long and so justly admired in London.

BOCCHERINI, who is still living at Madrid, and whose instrument is the violoncello, though he writes but little at present, has perhaps supplied the performers on bowed-instruments and lovers of Music with more excellent compositions than any master of the present age, except Haydn. His style is at once bold, masterly, and elegant. There are movements in his works, of every style, and in the true genius of the instruments for which he writes, that place him high in rank among the greatest masters who have ever written for the violin or violoncello. There is perhaps no instrumental Music more ingenious, elegant, and pleasing, than his quintets; in which, invention, grace, modulation, and good taste, conspire to render them, when well executed, a treat for the most refined hearers and critical judges of musical composition.

GIARDINI having resided upwards of thirty years in England, a tribute to his great abilities will be given elsewhere, in relating the musical transactions of our own country.

C H A P. X.

Of the Progress of Music in GERMANY during the Seventeenth Century.

THE number of musicians who distinguished themselves in this extensive empire, during the last century, is so great, that a dry indiscriminate list of their names, only, would fill several pages. But as the works of many of them are irrecoverably lost, and their talents forgotten, even by their countrymen, I shall bestow a niche in my work only to such as extended their reputation beyond their native soil, and whose works and fame are not yet consigned to oblivion.

The Lutheran religion, as well as the Roman Catholic, being favourable to ecclesiastical Music, and the princes of Germany great patrons of secular productions of the art, of all kinds, will account for the zeal and success with which it has been cultivated and encouraged throughout the empire; in which, as Music in almost all the common schools of every city, town, and village, is a part of general education, every inhabitant of Germany, gifted with genius, has an opportunity afforded him of discovering and improving it in very early youth.

The number, size, and excellence of the organs erected in the churches of Germany, have consequently been productive of great diligence and emulation in the organists; and as the passion for learned and polyphonic Music was not so early discountenanced by a partiality for simple melody in the cultivation of the musical drama in this country as in Italy, the reign of harmony and fugue continued much longer uninterrupted.

One of the most celebrated *organists* of Germany, during the early part of the last century, according to Mattheson ^(b) and Walther ⁽ⁱ⁾, was JOHN KLEMME, in the service of the Elector of

^(b) *Crit. Mus.* Tom. I. p. 272.

⁽ⁱ⁾ *Musical Lexicon*, in *Artic.*

Saxony,

Saxony, at whose expence he had had his musical education. In 1631 he published thirty-six fugues for the organ, after the manner of voluntaries. He was likewise author of spiritual madrigals, in German, for four, five, and six voices, and is in the list of the greatest harmonists of his time.

JOHN JACOB FROBERGER, organist to the Emperor Ferdinand III. who in his youth had been sent to Rome to study under the celebrated Frescobaldi, was regarded about the middle of the last century, as the greatest performer on the organ in Germany. He is much celebrated for his abilities by Kircher, who has inserted a *fantasia* of his composition in his *Musurgia* (*k*), upon the hexachord *ut, re, mi, fa, sol, la*, accommodated to the organ. Few of his compositions were published in his life time; but, according to Walther, his pieces for keyed-instruments were still highly esteemed among organists in 1732, and heard with admiration. Mr. Marpurg says, that his works will be always models for regular good fugues (*l*). His compositions for the harpsichord were published at Mayence, in 1696. And so late as 1714, the most important of his works appeared, for the first time, at Frankfort on the Mayne (*m*).

About the year 1660, ANDREAS HAMMERSCHMIDT, born in Bohemia, and organist of Zittau, in Upper Lusatia, by his performance and compositions acquired great reputation, particularly by his motets, which during the last century, according to Scheiben, were sung by authority in every church and school (*n*). There is a long list of his publications in Walther, which are chiefly choral, and said to have improved church Music so much, that on his tomb-stone he is called *the glory of Germany*. He died 1675, aged sixty-four.

Other celebrated organists and composers of the same period were SCHEIN, SCHEIT, SCHÜTZ, KINDERMANN, SCHEIDE-

MANN, and REINCKE. This last arrived at the great age of a hundred, within a few months. In his younger days having been elected successor to the famous Scheidemann, organist of St. Catharine's church, in Hamburg, it is related that a musician of Amsterdam having said, that he must be such a presumptuous man who would venture to take his place, that he should like to see him. Which speech having been repeated to Reincke, he sent him one of his compositions, with the following superscription: "this is the portrait of the audacious man you so much wish to see." The Dutchman found so much genius and learning in this composition, that he went to Hamburg purposely to hear him perform on the organ, which having done, he would have kissed his feet in testimony of the veneration with which his performance had impressed him.

At the latter end of the last century, there were several famous organists of the name of PACHELBEL; of these, John, of Nuremberg, born 1651, is said to have been the first who introduced the overture style into Germany. He was successively organist of the principal cities of the empire, and greatly improved both vocal and instrumental church Music, by his numerous compositions; all which were still held in great esteem, according to Walther, in 1732, when he published his Dictionary.

JOHN HENRY BUTTSTETT, born 1666, a scholar of John Pachelbel, and organist of the principal church at Erfurt, the capital of Thuringia, is numbered among the great organ-players and composers, for that instrument, of this time.

DIETERICH BUXTEHUDE, organist of the cathedral at Lubec, is ranked by Mattheson, in his *perfect maestro di capella* among the greatest organists in Germany. His compositions for the harpsichord were numerous and masterly. Two of his works *a violino, viol da gamba, e cembalo*, were published at Hamburg 1696.

JOHN KUHNAU, of Leipzig, besides being a great organist and composer, was an eminent scholar and mathematician. In 1689, he published the first and second part of his *Praxis* for the harpsichord; and in 1700, *Sacred Histories*, represented in fourteen sonatas.

sonatas, among which is the battle of David and Goliath. His works in various languages and faculties are innumerable (o).

GEORGE MUFFATT was an eminent organist, composer, and fughist, and one of the great harmonists of Germany, at the latter end of the last century. After being organist of the cathedral of Strasburg, he went to Vienna, Rome, and Paris, where he continued six years; during which time, he made himself in a particular manner acquainted with Lulli's style of composition. In 1690, he published his *Apparatus Musico-organisticus*, dedicated to the Emperor Leopold; a work consisting of twelve *toccate*, which he performed at Augsburg on the day that the emperor's consort was crowned empress, and his son Joseph King of the Romans.

Other great harmonists of Germany during the last century, were KLINGENSTEIN, who flourished about 1605; HERBST, 1619; ROSENMÜLLER, 1648; EBNER, maestro di capella to the Emperor Ferdinand III. 1655, who published an air composed by his imperial Majesty, with thirty-six variations, and a treatise on accompaniment; JOHN CASPAR KERL, who had been sent from Vienna to Rome to study under Carissimi, 1669; BERNHARD, 1682; HEINECHEN, 1683, who was so voluminous and excellent a theorist, that he has been called of late years, the Rameau of Germany; KEIRLEBER, 1691, a great canonist, who published a canon for five hundred and twelve voices and instruments; and, 1696, MURSCHAUSER. All these published compositions and treatises, which were well received and useful in their day.

Among THEORISTS and writers on the subject of Music in Germany, during the seventeenth century, must be numbered, Crüger, Baryphonus, Kepler, Kircher, and Printz, some of whom have been incidentally mentioned already, but too slightly to repay the reader for the trouble which a reference would give him; we shall, therefore, assign to each a short article here.

The great mathematician and astronomer KEPLER, in his *Harmonia Mundi*, published at Lintz, in Austria, 1619, speaks upon the subject of Music like a man who had not only thought of it as a

(o) This composer was sometimes very grotesque and fantastical: for instance, he

pretended to express by musical sounds the ten plagues of Egypt.

science subservient to the laws of calculation, but studied it as an elegant art, and been truly sensible to its powers.

JOHN CRÜGER, director of the Music in St. Nicolas' church, Berlin, published, in 1624, a work entitled *Synopsis Musices, continentem rationem constituendi et componendi melos Harmonicum*, which went through several editions. A treatise on singing, 4to. A hymn-book, with tunes, called *Praxis Pietatis Melica*; a work which had passed through thirty editions at Berlin, in the beginning of the present century. *Præcepta Musicæ Practicæ Figuralis*, 1625; and *Questiones Musicæ practicæ*, 1650.

HENRY BARYPHONUS, a skilful theorist, flourished about the year 1630, and was author of several treatises, particularly one in Latin, entitled *Plejades Musicæ*, which Walther styles excellent.

ATHANASIUS KIRCHER (*p*) has been severely censured by Meibomius and others, for his barbarous Latin and unclassical ideas of ancient Music, as well as for his credulity and want of taste in selecting his facts and materials; his *Musurgia*, however, contains much curious and useful information for such as know how to sift truth from error, and usefulness from futility.

WOLFGANG CASPAR PRINTZ, in 1690, had the merit of being the first, in modern times, to publish a *History of Vocal and Instrumental Music*, 4to. The book is now become so scarce that I have never been able by my own diligence, or that of my friends, to procure a copy of it, and all I know of its contents has been derived from M. Marpurg's extracts and account of it in his *Musical Essays* *; by which, however, it appears, that his plan and arrangement were good, and the authors he had consulted, the best on the subject. The work seems never to have been finished, as it consisted but of two hundred and twenty-three pages, and M. Marpurg's extracts advance no farther in the narrative than *Tuisco* and *Bardus*, Kings of the ancient Germans and Gauls, who founded the orders of Druids and Bards. Printz was not only an historian, but a musical composer, theorist, and critic. His work entitled *Der Satyrische Componist*, or *Satyrical Composer*, seems to have been produced "in Rabelais' easy chair." The work, which consists of

(*p*) See Vol. I. p. 104.

* 3. Band.

four parts, is written with great wit and humour; the jokes, though not of the most delicate and refined sort, are extremely queer and risible.

German princes had musical dramas, or OPERAS, performed at their courts, occasionally, both in their own language and in Italian, very early in the last century. In 1627, the celebrated Martin Opitz, whom the Germans call the father of their drama, translated the opera of *Daphne* from the Italian, which was set to Music by the chapel-master Schütz, and performed theatrically at the court of Dresden, on occasion of the marriage of the Elector's sister with the Landgrave of Hesse, George II. (q). In 1635, *Judith*, an opera, by the same poet, was set and performed in the same manner. And in 1653, an Italian opera written and set by Benedetto Ferrari, called *L' Inganno d' Amore*, was performed at Ratisbon.

The Emperor Leopold, passionately fond of Italian poetry and Music, is said, by Quadrio (r), not only to have been the constant patron of both, but to have written and set to Music, himself, many beautiful canzonets and madrigals. This prince, early in his reign, retained in his service the Italian lyric poet Minato, and the composer ANTONIO DRAGHI, to write and set operas for the imperial court at Vienna. In 1665, *Alcindo* and *Cloridia* were performed there. Of this last, Draghi was author both of the poetry and Music. This composer continued in the imperial service near forty years.

The first Italian opera performed at Munich seems to have been *Adelaide Regia Principessa di Susa*, set by GIULIO RIVA, *Medico Veneziano* (s). But the first opera that was exhibited on a public stage, was THEILES' *Adam and Eve*, in 1678, at Hamburg, in the German language; and the second, *Orontes*, the same year. The operas that were performed after this period at Hamburg, are recorded in Marpurg's Historical and Critical Essays on Musical subjects, and were very numerous. The principal composers of which, during the latter end of the last century, were Strunck, Franck, Förtsch, Conradi, and Couffer, who afterwards came to England, where

(r) *Della Storia d' Ogni Poesia*, Tom II. lib. 2do. p. 327.

(s) *Drammaturgia*.

he obtained the place of composer and master of the state band of Music in Ireland. In 1694, Keiser, Brenner, and Krieger began to compose for the Hamburg theatre, and in 1696 the operas of the celebrated Abate Steffani, which he had set in Italian for the court of Hanover, began to be translated and performed in the German language at Hamburg, except the airs, which were usually sung in Italian. This custom prevailed in several parts of Germany so late as the year 1733, when Graun set his opera of *Pharao*, the *Gianguir* of Apostolo Zeno, for the theatre at Brunswic, of which only the recitatives were translated into German, while the airs were set and sung in their original language (*t*).

In the beginning of the present century, according to Riccoboni (*u*), the performers in the German operas at Hamburg "were all tradesmen or handicrafts; when your shoe-maker was often the first performer on the stage; and you might have bought fruit and sweetmeats of the same girls whom the night before you saw in the character of *Armida* or *Semiramis*." This may, perhaps, have been literally true in the infancy of the musical drama in that city; and even later, some of the under-characters may have been filled in the manner mentioned by Riccoboni; but afterwards, it is known that Mattheson was many years a performer in those operas; and the celebrated composer Haffé, before he went to Italy, was a tenor singer on the Hamburg stage, in the operas of Keiser (*x*).

The VIOLIN seems to have been in general use, and more cultivated in Germany, during the last century, than in any other part of Europe; as appears by the number of performers who, according to Walther, have excelled, and the numerous composers and pieces published for that instrument, which he has recorded in his Dictionary; where we frequently find *solos*, *sonatas*, and *concertos*, expressly composed for it, as well as accompaniments to vocal Music.

JOHN SCHOP, at Hamburg, so early as the year 1640 and 1644, published paduanas, galliards, allemands, and thirty concertos for violins: that is, according to the acceptation of the word in

(*t*) *Vie de Graun*, prefixed in Italian, French, and German, to the collection of that composer's *Duets and Trios*, published

at Berlin, 1773.

(*u*) *General History of the Stage*, p. 212.

(*x*) *Life of Graun*, *ubi supra*.

those times, vocal compositions accompanied by violins and other instruments.

NICOLAUS HASSE, organist of Rostock, was a voluminous composer for the violin during the middle of the last century. BALTSAR, of Lubec, we have already seen (*y*), was the first great violinist we had ever heard in England during the last century; and KNERLER, about the middle of this, surprised us nearly as much.

CONRAD STENEKEN, of Bremen, a dilettante, published, in 1662, Quartets for two Violins, Tenor, and Bass. And DIETRICH BECKER, state violin at Hamburg, Sonatas for a Violin, Viol da Gamba, and Basso continuo, in 1668. JOHN JACOB WALTHER published, in 1676, at Mentz, *Scherzo di Violino con Basso*. JACOB SCHWEIFFELBUT, in 1684, at Augsburg, *Sonaten vor 2 Violinen und Bass*. HENRY JOHN FRANCIS BIBER, vice chapel-master to the Bishop of Saltzburg, published, in 1681, Solos for a Violin and Bass, of which further mention will be made hereafter. And GODFREY FINGER, a Silesian, who was many years in England during the latter end of the last century and beginning of the present, was a voluminous composer for the violin, who when he quitted England returned to Germany, and according to Telemann (*z*), was chamber-musician to Sophia Charlotte Queen of Prussia, in 1702, and in 1717 chapel-master to the court of Gotha.

So few productions of the numerous German composers of the last century are now to be found, that I have only been able to procure specimens of the following masters. Many of the works of Prætorius have fallen into my hands, which having scored, I found to be dry, and totally devoid of genius, though correct in harmony. Some of Froberger's organ pieces I have seen, which are full, and in the clear and masterly style of his model, Frescobaldi. The violin sonatas of Becker were well known in England during the latter end of the last century, and I have copies of many of them; but they are of a coarse texture. Baltzer's compositions discover genius and a strong hand. Finger is more feeble, but

(*y*) *Supra*, p. 427.

(*z*) In Matthewson's *Chrenpsorte*.

more polished, and like Bassani and Torelli. But of all the violin players of the last century, BIBER seems to have been the best, and his solos are the most difficult and the most fanciful of any Music I have seen of the same period. One of the pieces is written on three staves, as if a score for two violins and a base, but meant to be played in double stops. Others are played in different tunings of fourths and fifths, as for a treble viol. A second work by this musician, entitled *Fidicinium sacro-propbanum*, consists of twelve sonatas in four and five parts, to be played on three instruments; and a third: *Harmonia Artificiofo-ariosa*, published at Nuremberg, consisting of pieces of seven parts, to be played on three instruments. In this last work he is styled *dapifer*.

Of the admirable KEISER, who, though he began to distinguish himself in the last century, lived till the year 1739, I am in possession of many productions. This great musician, the first master of Haffe, was born at Weissenfels 1673, and maestro di capella to the court of Mecklenburg. He was educated at Leipzig, where he was entered of that university. He began to study Music in that city, but was chiefly his own master, forming himself upon the Italian school, by studying the best productions of that country. His first attempt at composition, that was performed in public, was a pastoral called *Ismena*, for Wolfenbuttle. *Basilus*, his first opera for Hamburg, was performed in 1694, with very great applause; *Adonis* was the next, which gave equal satisfaction. But, according to Mattheson, whatever Music he set to words on the subject of love, was peculiarly excellent. He kept possession of the Hamburg theatre upwards of forty years, till his operas amounted to more than a hundred. In the preface to one of them, in my possession, he calls it the hundred and seventh. And to these he afterwards added eleven more, *Circe* being the last, in 1734. Besides his dramatic productions, he composed *divertimenti*, *serenate*, and *cantatas*, innumerable. Indeed, this master was as sure of fancy and originality whenever he put pen to paper, as Haydn is at present. In a manuscript collection of near seventy cantatas by the greatest composers of his time, both of Italy and Germany, in
which

which there are twelve by Keiser, in opening the book by chance, in any part of it where his cantatas are inserted, it is instantly known to be his Music, at the first glance; so new are the passages, and so different the arrangement of the notes from that of his companions in this collection, amounting to near thirty of the first order. For grace and facility I do not recommend him; indeed, they were little sought or known during his time; but for modulation, ingenuity, and new ideas, he had scarcely his equal. Much has been said in my German Tour of the abilities of this musician; but it was said traditionally, as I was not then acquainted with his works, but took my ideas chiefly from the excellent authority of the elegant and judicious Haffé. I can now, however, speak from demonstration, and my own knowledge of his productions of various kinds, which manifest all the vigour of a fertile invention, and correctness of study and experience.

Of many other German composers of the last century, whose works I have not been able to find, I make no doubt but that as far as harmony, contrivance, complication, and diligence could carry them, they were superior to all other musicians of the time. But during the present century, by a more frequent intercourse with Italy and the best compositions and vocal performers of that country, with the establishment of Italian operas in all the principal courts of Germany, the inhabitants of that vast empire have cultivated Music to a degree of refinement, particularly instrumental, beyond any former period in the history of the art; and have not only supplied their own country with innumerable great musicians, but exchanged with Italy, and furnished every other part of Europe with professors, whose talents and abilities have been the delight and admiration of all true judges of composition and performance.

C H A P. XI.

Of the State of Music in FRANCE during the Seventeenth Century.

THE list of great musicians which France produced during the early part of this period is not very numerous, nor does Music seem to have been much cultivated or favoured in this kingdom, till the operas of Lulli were honoured with the patronage of Louis XIV. and excited the attention of the public.

Indeed, France had not sufficiently recovered from the horrors of a long and bloody civil and religious war, during the life of Henry IV. to make much progress in the arts of peace. However, the successor of this heroic and beneficent prince, Louis XIII. who began his reign in 1610, at only six years old, is said to have been not only a lover and encourager of the art, in riper years, but with the assistance of Beauchamp his first violin, who made the base, to have composed several airs (*a*). Pere Merfenne, Kircher, and later musical writers, have given, as a specimen of his invention, an air for a grand dance, in 1618, before he was fifteen years old. *Les vingt quatre violons du Roi*, subsisted in Henry the Fourth's reign, but these only seem to have been used in dancing. The lute was more an instrument of parade in these times than any other; and in 1609, Mary de Medicis, Henry the Fourth's second Queen, was followed in a grand dance by twelve lutes, led by Ballard, the principal lutenist of the court (*b*): and all the numerous collections of the court airs at this time were printed in the lute tablature, or notation, to which they were set by the authors of the tunes themselves.

The principal composer for the church during the reign of Louis XIII. seems to have been ARTHUR AUX COUTEAUX, who, among various musical works in Latin and French, published psalms

(*a*) *Recueil d'airs de cour.*

(*b*) *Theatres de France*, Tom. III.

which

which he dedicated to that prince (c). The favourite secular court composer of this period was JEAN-BATIST BOESSET, the best lutenist, and the principal composer of songs of his time. Some of his *Court Ayres, with their Ditties Englished*, were published in London by Filmer, 1629, of which it is now difficult to find the measure or accent.

But the most minute and satisfactory account of the state of Music in France, during the reign of Louis XIII. is to be found in the writings of PERE MERSENNE, particularly in his *Harmonie Universelle*, published at Paris in 1636, in Folio (d); a work in which, through all the partiality to his country, want of taste, and method, there are so many curious researches and ingenious and philosophical experiments, which have been of the greatest use to subsequent writers, particularly Kircher, as render the book extremely valuable. In his *twenty-third proposition, liv. i.* this author explains and describes twelve different kinds of Music and movement, used in France during his time: these were motets, songs or airs, passacailles, pavans, allemandes, gaillards, voltes, courantes, farabandes, canaries, branles, and balets, of all which he gives examples in notes. But though most of these movements were the specific names of the dances then in vogue, the *minuet*, which, during the present century, has been in such general favour all over Europe, is never mentioned.

In the *Pref. generale*, Mersenne speaks of Galileo's discoveries in harmonics, and in his Liv ii. *des consonances*, of sympathetic vibrations. In other parts of his work he explains clearly, the twelve keys major of practical Music; and shews, for the first time, perhaps, that there may be seventy-two keys, or six for each note, flat, natural, and sharp, major and minor. There is nothing in this good

(c) A mass in four parts by this venerable master has been inserted in the second volume of *Essai sur la Musique*, 1780, which is in general clear and clean counterpoint, *à capella*; however, several errors have escaped the notice of the learned editor, which seem more likely to have been the mistakes of the engraver than composer,

particularly the frequent violation of the well known rule against the succession of fifths.

(d) This work, corrected and enlarged, was translated into Latin, and published by the author in 1648, the year of his death, under the following title: *De Sonorum Natura, Causis et Effectibus*.

father's book which reflects more honour on his taste and penetration than his partiality for the *violin*, to which, in Liv. 4. *des Instrumens*, prop. i. he gives the preference over all other instruments then in use, at a time when it was thought unworthy of being admitted into the concerts of other countries.

It is amusing, however, to see how contented mankind has ever been in the most rude and uncultivated ages of the world, with their own talents and accomplishments. A singular instance of this mental comfort appears in Mersenne, Chap. *de l'Embellissement des Chants*, which he addresses "to posterity, that they may form some idea, says he, of our manner of gracing and embellishing airs; as such advances have at no time been made in polishing and refining melody, as at present." In his treatise *de la Voix*, where he explains the manner of running *divisions* and making *shakes*, he says, that "of all nations who study singing, and who run divisions in the *throat*, the French execute passages in the neatest manner; this even the Italians confess, who make a particular profession of singing. It is impossible" adds he, "to describe the beauty and sweetness of our vocal embellishments to such as have not heard them; for the purling of a stream, the meandering of a brook, or the warbling of a nightingale, is not half so mellifluous. And I find nothing in nature," continues this pious father, "that can give the least idea of these passages, which are far more ravishing than shakes or trills, for they are the *very quintessence* of Music (e)." He afterwards observes, that no traces are to be found in the writers of Music among the ancient Greeks, that this ingenious and voluptuous people ever had "*des fredons & des passages comme nous autres*: trills and divisions in their Music, like us."

One proposition in this book (xxxiv.) is to enquire whether the French method of singing is *the best of all possible methods*? and determines in the affirmative, not only with respect to this proposition, but affirms that of all those he had heard sing in neighbouring countries, as in Spain, Germany, Flanders, and Italy, he had met with none who sung so agreeably as the French. "There

(e) Liv. I. *de la Voix*, p. 40.

may," says he, "be now and then a miraculous performer in other countries, but I speak here in general."

He mentions *recitative* as a thing little practised in France, *for want of courage*. The Italians, he observes, had succeeded in this species of singing, which Giacomo Peri had invented at Florence the beginning of the century. Here he speaks of several musical dramas in Italy, but does not call them *operas* (*f*).

The *fi*, to express the seventh of the key, does not seem to have been in use at this time in France; as Merfennus in his solmisation has never introduced it, repeating the *mi*, in the key of C, for E and B.

The favourite singing-master and composer of songs, in France, about the middle of the seventeenth century, was MICHEL LAMBERT, who had so many scholars that he was obliged to teach a considerable number at a time, and at his own house, where he formed a kind of academy, and where he finished every lesson with singing to his own accompaniment several songs to a brilliant and enraptured audience. Marcel did the same, dancing with his best scholars, at the end of the lessons he gave at home, on his public days. The reputation of Lambert, like that of Abelard, was so great, that his disciples followed him into the country as far as Puteaux, where he had a villa (*g*). Lulli married the daughter of this musician, who was born in 1610, and died 1696.

Though the French have long wished to have a dramatic Music of their own, their most patriotic writers on the subject have been obliged to confess, that they owe the establishment of operas in France to the Italians. The continuator of M. Bonnet's *Hist. de la Musique*, M. Freneuse, a furious champion for Lulli and French Music of all kinds, allows that Rinuccini, who followed Queen Mary of Medicis into France, had furnished the first idea of dramatic Music at Paris; and that Cardinal Mazarin, during the minority of Louis XIV. had two operas, in Italian verse and to Italian Music, performed by a company of Italian singers, sent for expressly to impress the court of France with a favourable idea of the fashionable Music of his country.

(*f*) Liv. vi. *L'Art de bien Chanter*. A book with the same title was published at

Paris, by Bacilly, 1668.

(*g*) *Essai sur la Mus.* Tom. III. p. 440.

The first of these operas, performed at the Bourbon palace in 1645, seems to have been a burletta. Its title was *La Festa Teatrale della Finta Pazza*, written by Giulio Strozzi, but by whom set, does not appear. The second was *Orfeo & Euridice*, 1647. Besides these, at the nuptials of Louis XIV. 1660, *Ercole Amante*, a serious Italian opera, was performed in the same manner, and well received at court by the flatterers of the cardinal, says the continuator of Bonnet's History of Music. M. de Blainville, however, in his short History of Music, says (b) that he had seen the score of this opera, "and found, in examining it, all the recitatives, airs, choruses, symphonies, and dances, both in melody and harmony, of the same kind as those of Lulli." And adds, that there was in this opera, "among other things, an invocation to sleep, a sommeil, with ritornels and choruses, of great beauty." All these were performed before Italy had sent Lulli into France to render French operas perfect (i). And even before, Perrin, master of the ceremonies to Gaston Duke of Orleans, had attempted to elevate the French language to the honour of being set to Music. He began by short airs and recitatives for a single voice; then composed dialogues which Lambert, and Cambert, a musician in the service of the Queen Mother, set to Music. At length, in 1659, Perrin ventured to write a kind of pastoral drama, which was set and performed at Issy, in the house of M. de la Haye, and succeeded admirably.

The King being desirous of hearing this pastoral, it was performed before his Majesty and the cardinal, at Vincennes, and was much applauded. Encouraged by this success, Perrin and Cambert associated; and having prevailed on the Marquis de Sourdeac to join them, he not only assisted with his knowledge in mechanics and genius for inventing machinery and decorations, but with money to support the expence of the undertaking. This

(b) Page 87. *J'y ai trouvé entre autres un sommeil coupé de symphonie, de chant, et de chœurs, d'une grande beauté.* In Marpurg's Musical Essays, Vol. I. p. 183. we have not only the names of the poet and composer of this opera, but of all the singers and dancers. In which account, however,

there is a mistake: this drama was written for Venice, by Bifaccioni, 1645; and the Music composed by Rovetta. Not written by Camilli, and set by Bifaccioni, as M. Marpurg tells us.

(i) *Hist. de la Mus. ubi supra.*

triumvirate produced three or four operas, each being confined to a particular department: to Perrin was assigned the poetry, to Cambert the composition of the Music, and to the Marquis the machinery and decorations. *Ariane*, on the point of being performed, was stopped by the death of Cardinal Mazarin, as was every further attempt of the same kind, till 1669, when the King granted an exclusive *privilege* to Perrin for establishing operas, not only at Paris, but throughout the kingdom of France. The opera of *Pomona*, set by Cambert, was long performed in the great hall of the Hôtel de Nevers; and, in 1671, at the Tennis Court, called the Hôtel de Guénégaud, where it had a run of eight months. It was for *Pomona* that the two singers *Cledière* and *Beaumavielle*, who afterwards did such justice to the parts allotted them, came from Languedoc. But upon a difference between the Marquis de Sourdiac and Perrin, in 1672, the King withdrew the patent granted to Perrin, and conferred the *privilege des academies de Musique* upon JOHN BAPTIST LULLI; who begun his regency and the exhibition of his opera called *Les Fêtes de l'Amour et de Bacchus*, at the Tennis Court de Belair, which was honoured, in a singular manner, with the performance of the Duke of Monmouth, the Duke de Villeroi, the Marquis de Raffen, and M. le Grand, in a ballet with four stage dancers, before the King. Lulli had already been so fortunate as to find, and connect himself with, the lyric poet Quinault, whose dramas for Music were so superior to all the productions of that kind, which had then appeared in any part of Europe.

This fortunate musician, the son of a peasant in the neighbourhood of Florence, was born 1633. He had a few instructions in Music from a Cordelier. His first instrument was the guitar, to which he was always fond of singing (*k*). The Chevalier de Guise brought him into France, in 1646, as a present to his sister, Mademoiselle de Guise, who placed him among the assistants of her kitchen, where he was assigned the honourable office of *sous-marmiton* (*l*).

In his leisure hours, being naturally fond of Music, he used to

(*k*) Ballard's preface to his edition of Lulli's Operas. (*l*) Under-scullion.

be scraping on a miserable violin, to the great annoyance of his fellow-servants. However, his disposition for Music being discovered, his patroness had him taught the violin by a regular master, under whom he made so rapid a progress, that he was admitted among the violins of the King's band; where he distinguished himself so much, that he was employed to compose the Music for the court ballets, in which Louis XIV. at this time very young, used to dance. But though Lulli approached the royal presence early in life, it was by slow degrees that he arrived at solid preferment. In 1652, he was appointed superintendant, or master, of the King's new band of violins, which, if we may judge by the business assigned them afterwards by Lulli in his operas, was composed of musicians not likely by their abilities to continue the miraculous powers ascribed to Orpheus and Amphion (m).

In this station Lulli was twenty years working his way to the opera regency and favour of the public, before he composed operas and had them performed under his own direction. After *Les Fêtes de l'Amour et de Bacchus*, Lulli composed, in 1673, *Cadmus*; 1674, *Alceste*; 1675, *Thésée et le Carnaval*; 1676, *Atys*; 1677, *Isis*; 1678, *Psyché*; 1679, *Bellerophon*; 1680, *Proserpine*; 1681, *Le Triomphe de l'Amour*; 1682, *Persée*; 1683, *Phaëton*; 1684, *Amadis*; 1685, *Roland*; *L'Idyle de la Paix*, and *Le Temple de la Paix*; 1686, *Armide*; 1687, *Acis et Galathée*: all these were written by Quinault, except *Psyché* and *Bellerophon*, both by Corneille, and *Acis et Galathée* by Campistron (n).

Lulli, though coarse in his manners, and a bad courtier, was in such favour with Louis XIV. that he could listen to the Music of no other composer. This splendid prince not only granted him *lettres de noblesse*, but conferred on him the charge of *secrétaire du roi*, and bestowed many other honours and favours on his family. And that his compositions were profitable, is evident from the treasures found in his coffers after his decease, amounting to 130,000

(m) Ces nouveaux musiciens formés par Lulli, selon M. Laborde, devinrent bientôt les plus habiles de l'Europe, et ce n'est pas beaucoup dire; l'ignorance des musiciens de ce tems étant portée à un tel point, qu'ils ne pouvaient exécuter que ce qu'ils avaient ap-

pris par cœur. Essai sur la Mus. Tom. III. p. 444.

(n) *Armide*, says Bonnet, Tom. III. p. 104, was the favourite opera of the ladies; *Atys*, of Louis XIV.; *Phaëton*, of the public; and *Isis*, of professors.

livres in gold, an extraordinary sum in those days. Though externally so rough, and unpolished in his manners, he was a man of integrity and free from all malevolence. His greatest defects were the love of wine and money. He had the address to make himself beloved as well as feared by his performers, an art absolutely necessary for the manager of an opera, but which can only subsist by the exercise of authority. Indeed, the superiority of Lulli's talents gave him an ascendant over his dependants which greatly confirmed his dominion. And, however difficult it may be to govern capricious and enthusiastic subjects, real merit, exact justice, and good treatment, will never fail to preserve order and obedience.

Lulli married the daughter of Lambert, the celebrated musician and singing-master of his time, who lived till the year 1720. Having composed a *Te Deum* for the King's recovery after a dangerous illness in 1687, during the performance at the church of the Feuillants, in the animation of beating time and difficulty of keeping the band together, by striking his foot instead of the floor with his cane, he occasioned a contusion that, from a bad habit of body, brought on a mortification, which was soon pronounced to be incurable. Every expedient that was tried in order to stop the progress of the malady being ineffectual, he was informed of his situation. His confessor refusing to give him absolution unless he would burn the opera of *Achille & Polixene*, which he was composing for the stage, he consented, and this new Music was committed to the flames. A few days after, being a little better, one of the young princes of Vendôme went to see him: "Why Baptiste," says he, "have you been such a fool as to burn your new opera, to humour a gloomy priest?" "Hush, hush!" says Lulli, "I have another copy of it." However, a few days after, he was not only obliged to submit to the will of his confessor, but of death himself, who terminated his existence, March the 22d, 1687, at fifty-four years of age.

On a recent examination of the operas of Lulli, I am much less surprised at the high favour they obtained in France, than I used to be; for though the recitative is disagreeable to all but the natives

of

of that kingdom, yet the airs, choruses, and dances, are so easy and natural, that it is hardly possible for a lover of Music, gifted with a voice and disposition for singing, to hear them frequently performed, without remembering them. And this accounts for what I have often heard asserted in my youth, that the audience in the parterre of a French opera-house, used to join with the performers in singing the choruses.

Of the first singers in Lulli's operas, of whom an account of the principal has been given by M. Laborde, in piquant articles of his *Essai sur la Musique*, if we may judge of them by the songs they had to execute, their abilities were not very stupendous; good voices and good action seem to have been their principal merit. Many of them were brought from remote provinces of the kingdom, before they had any knowledge of Music, and were taught their parts by Lulli himself and his father-in-law, Lambert, merely by ear. But Lulli not only taught his vocal performers to sing, but to act, and sometimes gave instructions even to the dancers (o). The celebrated LA ROCHOIS had no other master in singing or acting than Lulli. DUMENI, whose voice was a counter-tenor, and who performed the principal men's parts, had been cook to M. de Foucault, and was utterly ignorant of Music, when he first mounted the stage. *Clediere*, *Rossignol*, *Beaumavielle*, *Thevenard*, and the rest, must have been equally ignorant, as no preparation was likely to be made for a profession which did not exist at a time when they should have begun their studies. LA MAUPIN, the successor of La Rochois, seems to have been the most extraordinary personage of all this *firén troupe*. She was equally fond of both sexes, fought and loved like a man, and resisted and fell like a woman. Her adventures are of a very romantic kind. Married to a young husband, who was soon obliged to absent himself from her, to enter on an office he had obtained in Provence, she ran away with a fencing-master, of whom she learned the small-sword, and became an excellent fencer, which was afterwards a useful qualification to her on several occasions. The lovers first retreated from

(o) *Hist. de la Mus.* Tom. III. p. 207, 209.

persecution

persecution to Marseilles; but necessity soon obliged them to solicit employment there, at the opera; and, as both had by nature good voices, they were received without difficulty. But soon after this she was seized with a passion for a young person of her own sex, whom she seduced, but the object of her whimsical affection being pursued by her friends and taken, was thrown into a convent at Avignon, where the Maupin soon followed her; and having presented herself as a novice, obtained admission. Some time after, she set fire to the convent, and, availing herself of the confusion she had occasioned, carried off her favourite. But being pursued and taken, she was condemned to the flames for contumacy; a sentence, however, which was not executed, as the young Marseillaise was found, and restored to her friends.

She then went to Paris, and made her first appearance on the opera stage in 1695, when she performed the part of Pallas, in *Cadmus*, with the greatest success. The applause was so violent, that she was obliged, in her car, to take off her casque to salute and thank the public, which redoubled their marks of approbation. From that time her success was uninterrupted. Dumeni, the singer, having affronted her, she put on men's cloaths, watched for him in the Place des Victoires, and insisted on his drawing his sword and fighting her, which he refusing, she caned him and took from him his watch and snuff-box. Next day Dumeni having boasted at the opera-house, that he had defended himself against three men who attempted to rob him, she related the whole story, and produced his watch and snuff-box in proof of her having caned him for his cowardice. Thevenard was nearly treated in the same manner, and had no other way of escaping her chastisement, than by publicly asking her pardon, after hiding himself at the Palais Royal during three weeks. At a ball given by Monsieur, the brother of Louis XIV. she again put on men's cloaths, and having behaved impertinently to a lady, three of her friends, supposing the Maupin to be a man, called her out. She might easily have avoided the combat by discovering her sex, but she instantly drew, and killed them all three. Afterwards, returning very coolly to the ball, she told the story to Monsieur, who obtained her pardon.

After other adventures, she went to Brussels, and there became the mistress of the Elector of Bavaria. This prince quitting her for the Countess of Arcos, sent her by the count, husband of that lady, a purse of 40,000 livres, with an order to quit Brussels. This extraordinary heroine threw the purse at the count's head, telling him, it was a recompence worthy of such a scoundrel and —— as himself. After this, she returned to the opera stage, which she quitted in 1705. Being at length seized with a fit of devotion, she recalled her husband, who had remained in Provence, and passed with him the last years of her life in a very pious manner, dying in 1707, at the age of thirty-four (*p*).

Concerning the Music of Lulli and his imitators, with which the French nation was so long delighted, I shall enter on no further discussion. It has now, indeed, but few adherents; however, among these may be numbered the author of *Essai sur la Musique*, who, in speaking of Lulli, says "he was the creator of a style of Music; which, since his time, instead of advancing towards perfection, as is imagined, has perhaps lost more than it has gained." A supposition which is not very consonant with the seemingly warm encomiums bestowed by this intelligent writer upon Piccini, Sacchini, and Paisiello, or, indeed on his favourite, Rameau.

Voltaire, who had lived long out of France, and had had an opportunity of hearing the opinions of the rest of Europe about the Music of his country, is more fair and reasonable in speaking of it, than most writers on the subject.

"French Music," says he (*q*), "at least the vocal, is not pleasing to any other nation, on account of the peculiarity of our prosody. We always lay a stress on the last syllable, while other nations lean on the penultima, or ante penultima, like the Italians. Ours is the only language which has words terminated by *e* mute; and this *e*, which is not pronounced in common speech, has a note assigned it in musical declamation, as *gloi-reu*, *vic-toir-reu*, *barbari-eu*, *furi-eu*. And this it is that renders most of our airs and recitatives insupportable to all that are not accustomed to them. Besides this, the slowness of our melody, which is a strange contrast to our na-

(*p*) *Essai sur la Mus.*

(*q*) *Collect. complete de ses Oeuvres*, Tom. XVIII.

tional vivacity, will always make the Music of France only fit for its own inhabitants.

“ Our instrumental Music, though less offensive to strangers, is somewhat affected by the monotony and langour of the vocal; but many of our movements for instruments, especially our airs for dancing, have been much used and admired in other countries.

“ It is worth remarking, that when Lulli, the father of true French Music, came into France, the dramatic Music of Italy was of the same grave, noble, and simple kind, as that which we still admire in the recitatives of Lulli. And nothing can more resemble these recitatives than Luigi's famous motet, composed and universally admired in Italy about the same time: *Sunt breves mundi rosæ*.

“ However, the poetry of Quinault animated the Music, more than the Music of Lulli animated the words. The genius of two such men, and great acting, were necessary to form such an exhibition in some parts of *Atys*, *Armide*, and *Roland*, as neither antiquity nor any cotemporary people ever knew.

“ The airs are not equal to the recitatives of these great scenes. They are short simple tunes, more in the style of our Noëls, or Christmas carols, and Venetian ballads, than opera songs. But such was the taste of the times. And the more artless the Music, the easier it was retained.

“ After Lulli, COLASSE, CAMPRA, DESTOUCHES, and other musicians, have only been his imitators, till the time of Rameau, a man who surpassed them all in science, and whose theoretical writings have made Music a new art.

“ With respect to our ecclesiastical composers, though many of them have been celebrated in France, their works have not yet penetrated into other countries.”

The opinions of this eminent writer concerning the Music of France will have the more weight, as he was seldom unmindful of the honour of his country.

There were several organists in France during the last century, who are still spoken of with reverence by their countrymen. The chief of these were the three BOURNONVILLES; the three brothers of the name of COUPERIN, whose family and fame still subsist in

the present Armand-Louis Couperin, a great organ player, whom I heard at Paris, in 1770; CHAMBONIERES, who died 1670, the son of one organist of the name of CHAMPION, and grandson of another; DUMONT, not only a good organist but a good church composer, and the first in France who, by command of Louis XIV. introduced violin accompaniments to the voices in the Music of the church; L'ABBE DE LA BARRE, a favourite organist and composer to Louis XIV. who died 1678; at which time, that monarch appointed four organists to supply his place, who did duty quarterly: TOMELIN, LE BEGUE, BUTERNE, and NIVERS, all men of abilities, who played for the place, and obtained it by a decided superiority over many candidates; and LA LANDE, the most celebrated organist and church composer of France during the latter end of the last century and beginning of the present, who began to flourish in 1684. M. Laborde (r) not only places him at the head of ecclesiastical composers in France, but in all Europe: "he was the creator of church Music," says this author, and adds, "that even foreigners, since his time, give the French the preference in this kind of Music to every other country." This is a bold assertion, more easily made than proved. I have not the least doubt but that La Lande was an excellent fughist and great master of harmony, though, according to M. Suard's rule, his not having been heard of out of France, is a proof to the contrary. I own, that in my researches after new and old Music of every country and kind, I have as yet found none of La Lande's; nor has his name yet penetrated into England, though both the name and works of Lulli, Rameau, Le Claire, and Mondonville, are well known among us.

Besides the composers for the church and theatre, during the last century, there were several secular composers, chiefly lutenists, whose names are preserved in the musical annals of France. Le Fevre, who flourished about 1613; Guedron; and the elder Boesfet (Anthoine), whose songs were in great favour during the reign of Louis XIII. not only in France but England (s). L'ENCLOS,

(r) *Essai sur la Musique*, Tom. III. p. 43.

(s) See above, p. 402.

the father of the celebrated Ninon, was a lutenist of considerable eminence, who dying in 1630, left his daughter an orphan of fifteen years old; a lady, who besides her wit and personal charms, was a good performer on the lute and harpsichord, and gave concerts at her house to the first people in France. CAMUS is frequently mentioned by French musical writers as one of their best composers of songs of the last century; he was of the King's band, and died 1677. The younger Boeffet (Jean-Baptiste), who died in 1686, was the author of many melodies that are still sung in parodies and ballad farces, and in the provinces of France. LE MAIRE, a musician of the last century, is certainly entitled to the honour of inventing, or at least of bringing into general use in France, the syllable *fi*, to express the seventh of a major key, instead of repeating the *mi* in solmisation, by which students in singing escape the perplexing difficulty of the mutations. The title to the invention, small as it seems, has been often disputed; but having taken great pains to trace the first use of this syllable in singing, I have never been able to discover any musician to whom it is so justly due, as Le Maire.

M. Laborde has inserted in his second volume a great number of French airs of the sixteenth and seventeenth centuries, to which such names of ancient poets and musicians are prefixed as excite great curiosity; but when we see how they are tricked up by the editor, with all the chromatic learning of modern times in the accompaniment, and taste in the appoggiaturas and embellishments, it destroys all the reverence and respect which, in their native simple garb, they would have inspired. This want of fidelity in copying, throws a doubt upon all the transcripts and representations of ancient things that come from France. In the history of an art, nothing can ascertain its state and progress at different periods of its cultivation, or satisfy a careful enquirer, but the most genuine and exact fac-similes. In the drawings given by M. Laborde from illuminations in ancient manuscripts, and Asiatic and African instruments, there is such a mixture of modern and European ornaments, that all ideas of distance in time and place are totally destroyed.

C H A P. XII.

Progress of CHURCH MUSIC in ENGLAND after the Death of Purcell.

THE chief composers for the church, after the decease of Purcell, who have not been already mentioned, were Clarke, the Rev. Dilettanti Dr. Holder, Dr. Creighton, William Tucker, and Dr. Aldrich, with Goldwin, Dr. Crofts, Weldon, Doctors Green, Boyce, and Nares.

JEREMIAH CLARKE had his education in the Chapel Royal, under Dr. Blow, who seems to have had a paternal affection for him. In 1693 he resigned, in his favour, the place of master of the children and almoner of St. Paul's, of which cathedral Clarke was soon after likewise appointed organist. In 1700, Dr. Blow and his pupil were appointed gentlemen extraordinary in the King's chapel; of which, in 1704, on the death of Mr. Francis Piggot, they were jointly admitted to a place of organist.

The compositions of Clarke are not numerous, as an untimely and melancholy end was put to his existence, before his genius had been allowed time to expand.

Early in life, he was so unfortunate as to conceive a violent and hopeless passion for a very beautiful lady of a rank far superior to his own; and his sufferings, under these circumstances, became at length so intolerable, that he resolved to terminate them by suicide. The late Mr. Samuel Wiely, one of the lay-vicars of St. Paul's, who was very intimate with him, related the following extraordinary story, which he had from his unfortunate friend himself. "Being at the house of a friend in the country, he found himself so miserable, that he suddenly determined to return to London; his friend observing in his behaviour great marks of dejection, furnished him with a horse, and a servant to attend him. In his way to town, a fit of melancholy and despair having seized him, he alighted, and giving his horse to the servant, went into a field,

in

in the corner of which there was a pond surrounded with trees, which pointed out to his choice two ways of getting rid of life; but not being more inclined to the one than the other, he left it to the determination of chance; and taking a piece of money out of his pocket, and tossing it in the air, determined to abide by its decision; but the money falling on its edge in the clay, seemed to prohibit both these means of destruction. His mind was too much disordered to receive comfort or take advantage of this delay; he therefore mounted his horse and rode to London, determined to find some other means of getting rid of life. And in July 1707, not many weeks after his return, he shot himself in his own house in St. Paul's church-yard; the late Mr. John Reading, organist of St. Dunstan's church, a scholar of Dr. Blow, and master of Mr. Stanley, intimately acquainted with Clarke, happening to go by the door at the instant the pistol went off, upon entering the house, found his friend and fellow-student in the agonies of death."

The anthems of this pathetic composer, which Dr. Boyce has printed, are not only more natural and pleasing than those of his master Dr. Blow, but wholly free from licentious harmony and breach of rule. He is mild, placid, and seemingly incapable of violence of any kind. In his first anthem (Vol. II.) which required cheerfulness and jubilation, he does not appear in his true character, which is tender and plaintive. The subject of the next is therefore better suited to the natural bias of his genius. There is indeed nothing in this anthem which indicates a master of grand and sublime conceptions; but there is a clearness and accuracy in the score, and melancholy cast of melody and harmony suitable to the words, which are likewise well accented, that cannot fail to soothe and please every appetite for Music which is not depraved.

His full-anthem: "Praise the Lord, O Jerusalem," is extremely natural and agreeable, and as modern and graceful as the gravity of the choral service, will, with propriety, allow. And in his verse anthem, the movements in triple time are as pathetic, and even elegant, as any Music, of the same period; ecclesiastical or secular, that was produced, either at home or on the continent. There is a very agreeable verse anthem of his composition in a collection.

collection published by Walsh: "The Lord is my strength and my song," with more spirit in it than I thought he could muster. But the verse "O Lord send us now prosperity," on a ground-base in Purcell's manner, is extremely pleasing and ingenious. Tendernefs is, however, so much his characteristic, that he may well be called the musical Otway of his time (*u*).

WILLIAM HOLDER, doctor of divinity, canon of Ely, residentiary of St. Paul's, and sub-dean of the Chapel Royal, not only merits particular notice as an able and learned writer on the theory of Music, but as an ecclesiastical composer of anthems, of which three or four are preserved in Dr. Tudway's collection, British Museum. From the regularity, and unembarrassed arrangement of the several parts in these specimens of his composition, it is easy to discover, that he had not studied and practised counterpoint in the superficial manner of an idle dilettante, but with the application of a diligent professor.

Besides his eminence as a divine, and deep knowledge in Music, he distinguished himself as a philosopher, a mathematician, and a philologer. He was one of the first fellows of the Royal Society, and in treating several curious subjects, nice selection and application of words manifest him to have been a consummate master of our language. Indeed, the strength, precision, clearness, and compression of his style has been hardly ever equalled by any writer on philosophical subjects in our country; particularly in his admirable treatise on the *Elements of Speech*, published 1669, and drawn up with the benevolent design of giving relief to a person that was deaf and dumb. In this essay he has analysed, dissected, and classed the letters of our alphabet so minutely and clearly, that it is well worthy the attentive perusal of every lover of philology, but particularly of lyric poets and composers of vocal Music; to whom it will point out such harsh and untunable combinations of letters and syllables as from their difficult utterance impede and corrupt the voice in its passage.

(*u*) I once asked Dr. Johnson, if he did not think Otway a good painter of tender scenes? and he replied, "Sir! he is all tendernefs." And the same may be said of Clarke.

In 1694, Dr. Holder published *A Discourse concerning Time*, in which, among other things, the deficiency of the Julian Calendar was explained, and the method of reforming it demonstrated, which was afterwards adopted in the *change of style*. It is to be lamented that in treating this subject with so much clearness and abilities, so good a musician did not extend his reflections on the *artificial parts of time*, to its divisions and proportions in musical measures; a subject upon which the Abate Sacchi has written in Italian (x); but which rhythmically, or metrically considered in common with poetry, has not yet been sufficiently discussed in our own language.

The same year was published by Dr. Holder *A Treatise on the natural Grounds of Harmony*, in which the propagation of sound, the ratio of vibrations, their coincidence in forming consonance, sympathetic resonance, or *sons harmoniques*, the difference between arithmetical, geometrical, and harmonic proportions, and the author's opinion concerning the Music of the ancients, to whom he denies the use of harmony or Music in parts, are all so ably treated, and clearly explained, that this book may be read with profit and pleasure by most practical musicians, though unacquainted with geometry, mathematics, and harmonics, or the philosophy of sound (y).

Dr. Holder died in 1696, aged eighty-two, and was buried in the subterraneous chapel of St. Paul's church, where a marble monument is erected to his memory, with an inscription reciting his titles, talents, and extensive knowledge.

ROBERT CREYGHTON, D. D. one of the gentlemen of Charles the Second's chapel, and precentor of the cathedral at Wells, has a just title to a place among reverend dilettanti; for though he was not gifted with great original genius for musical composition, which he only studied as an amusement, at his leisure hours; yet

(x) *Del Tempo nella Musica.*

(y) This book is said in the introduction to have been drawn up chiefly for the sake and service of the gentlemen of the Chapel Royal, of which he was sub-dean, and in which, as well as other cathedrals to which his power extended, he is said to have been

a severe disciplinarian; for being so excellent a judge and composer himself, it is natural to suppose that he would be the less likely to tolerate neglect and ignorance in the performance of the choral service. Michael Wise, who perhaps had fallen under his lash, used to call him Mr. *Snub-dean*.

he has left such pleasing and elegant proofs of his progress in the art, as manifest judgment, taste, and knowledge. This venerable divine living to the great age of ninety-seven, died in 1736. There are two complete services by Dr. Creighton in Dr. Tudway's collection, one in E flat and one in C natural; and two anthems in E flat, that are extremely pleasing.

The Rev. WILLIAM TUCKER, likewise one of the gentlemen of King Charles the Second's chapel, and precentor of Westminster Abbey, was a very judicious composer of choral Music. Mr. Mason, in speaking of the full anthem: "O give thanks unto the Lord," by this ingenious dilettante, very truly observes, that "every syllable in this composition has its just length, and each part of a sentence its proper pause; it admits no perplexing alterations or unmeaning repetitions, but proceeds in one full, yet distinct strain, harmonically, yet intelligibly (z)."

So many circumstances must concur in forming a complete musician among the LOVERS of the art, who have no other view in its cultivation, than pure amusement, that however ardent their zeal and sublime their genius, if they have not been early initiated in the mysteries of counterpoint, and pursued its labyrinths with the perseverance of professional students, timidity, embarrassment, ignorance, and confusion, will appear in their scores at the first glance of a regular bred composer. In general, their practice, reading of scores, experience, and application, are inferior to those of the meanest organist, or ripieno performer: disdaining to perform under-parts, or to study them in the works of great masters, as soon as they know their gammut, their chief practice consists in solos and amusing melodies; so that they remain to the end of their lives unable to count rests, or keep time, with professional firmness and accuracy; and either totally neglecting or running away too soon from plain counterpoint to florid, a want of instruction and regular study appear in the bases they put to the slightest and most natural melodies.

The Rev. Dr. HENRY ALDRICH, appointed dean of Christ-

(z) *Collection of the Words of Anthems*, p. 24. note †. I am acquainted with only three anthems by this composer: "Lord

how long; I will magnify thee;" both verse anthems; and his full anthem: "O give thanks unto the Lord."

church, Oxon, in 1689, was a singular instance of an unprofessional musician obviating all these deficiencies, and at the same time that he was greatly distinguishing himself as a polemical writer, a polite scholar, a theologian, a profound critic, an architect, and a man of sound judgment, and exquisite taste in arts, science, and literature in general, he became so profound and skilled in the theory and practice of harmony, that his compositions, particularly for the church, equal in number and excellence those of the greatest masters of his time (a).

Though not more than five or six of his choral productions continue to be performed, except at Oxford, yet he composed near forty services and anthems which are preserved in the third volume of Dr. Tudway's collection, British Museum. Besides these Dr. Aldrich enriched our protestant cathedrals with many admirable compositions by adapting English words from the psalms, or liturgy, to anthems and motets, of Tallis, Bird, Palestrina, Carissimi, Graziani, and Bassani, that were originally set to Latin words for the Roman Catholic service. Among his compositions of a lighter kind, he amused himself with setting rounds and catches, of which eight or ten are inserted in the two books of the Catch-club, or merry Companion. The smocking catch: "Good! good, indeed!" and the round: "Hark the bonny Christ-church bells," have been always admired; the first for humour and contrivance, and the second for its pleasing melody and general effect.

The admirable choral discipline he preserved in his college, at Oxford, for upwards of twenty years, is still remembered. Indeed, without neglecting more important concerns, he seems to have interested himself in the cultivation and prosperity of the art with as much zeal and diligence, as if his studies and pursuits had been circumscribed to that alone. He not only had concerts and rehearsals at his apartments weekly, but established a music-school in

(a) His harmony and modulation are unexceptionable; but his melodies are sometimes defective in rhythm, and in his celebrated service in G, the accentuation of the words is inaccurate. But it was a common error in his time for the measure to be broken and amputated.

(b) His full anthem: "Out of the deep," inserted in Boyce's second volume, is excellent composition, in the manner of our best old masters. In the full anthem: "O give thanks," in the same volume, he is perhaps a little embarrassed by the unwieldiness of six parts.

his college, where he both tried and rewarded genius and assiduity. Music perhaps never flourished so much at Oxford as under his example, guidance, and patronage (c).

This worthy and most accomplished divine bequeathed to his college, at his decease in 1710, an admirable collection of Music, to which, by the indulgence of the dean and canons, I have not only been honoured with frequent access, but been liberally allowed to transcribe and make extracts from some of the most curious books, out of the college.

Having, in 1778 and 1779, made a catalogue of these musical works, I can venture to say, that for masses, motets, madrigals, and anthems of the sixteenth and seventeenth centuries, the collection is the most complete of any that I have had an opportunity of consulting.

I examined in the college a port-folio of fragments and memorandums, made by this active dignitary of our church, for a profound and ample treatise on Music, by which it appears, that his reading and meditation on the art, had been equal to his application and practice (d).

JOHN GOLDWIN, or GOLDING, was a disciple of Dr. Child, and his successor in the free chapel of St. George at Windsor, 1697. In 1703, he was appointed master of the choiristers in the same chapel, and continued to occupy both those stations till his decease in the year 1719. Nothing can be more just than the short character given of the productions of this master, by the late honest

(c) See *Remarks on Avison's Essay on Musical Expression*, printed 1753, page 100, where a very particular account is given on Dr. Aldrich's choral government.

(d) Contents of Dr. Aldrich's papers prepared for a treatise on Music:

1. Theory of organ-building, in which are given the measures and proportions of its several parts and pipes.
2. Principles of ancient Greek Music.
3. Memorandums made in reading ancient authors, relative to several parts of Music and its effects.
4. Uses to which Music was applied by the ancients.
5. Epithalamium.
6. Excerpta from Pere Menestrier. Pro-

portions of instruments. Exotic Music.

7. Argument of ancient and modern performance in Music.

8. Theory of modern musical instruments.

9, 10, and 11 ditto.

12. Miscellaneous papers concerning different points in the theory and practice of Music, in great confusion.

13. Another bundle of papers on the construction of the organ.

14. Ditto, on different instruments. The above in the doctor's own hand-writing.

15. Fragment of a treatise on counterpoint, in a different hand. *Theoria Musices*. Transcribed by an amanuensis.

and candid judge, Dr. Boyce, who in his short account prefixed to the second volume of his collection, says that "there is in them a singularity of modulation, which is uncommon and agreeable." And when we consider the time of his death, it seems, by the small number of his works that have come to my knowledge, as if this composer had anticipated many combinations and passages of a much later period.

WILLIAM CROFT, educated in the Chapel Royal under Dr. Blow, was born in 1677, at Nether Easington, in Warwickshire. His first preferment, after quitting the chapel on the loss of his treble voice, was to the place of organist of St. Anne's, Westminster, where an organ was newly erected. In 1700, he was admitted a gentleman extraordinary of the Chapel Royal; and in 1707, upon the decease of Jeremiah Clarke, he was appointed joint organist with his master, Dr. Blow; upon whose decease, in 1708, he not only obtained the whole place of organist, but was appointed master of the children and composer of the Chapel Royal, as well as to the place of organist of Westminster-Abbey.

All these appointments at so early a period of life, being now but thirty-one years of age, occasioned no diminution of diligence in the performance of his duty, or zeal in the study and cultivation of his art. And, indeed, he seems to have gone through life in one even tenor of professional activity and propriety of conduct. We hear of no illiberal traits of envy, malevolence, or insolence. He neither headed nor abetted fiddling factions; but insensibly preserving the dignity of his station, without oppressing or mortifying his inferiors by reminding them of it, the universal respect he obtained from his talents and eminence in the profession seems to have been blended with personal affection.

In the year 1711, he resigned his place of organist of St. Anne's church, in favour of Mr. John Isham; and in the following year published, anonymously, under the title of *Divine Harmony*, a similar book to that of Clifford, mentioned above (e), containing the words only, of select anthems used in the Chapel Royal, Westminster

ster-Abbey, St. Paul's, &c. with a preface containing a short account of our Church Music, and an encomium on Tallis and Bird.

In 1715, he was honoured with the degree of doctor of Music, in the university of Oxford. His exercise for this degree, which was performed in the theatre, July 13th, by the gentlemen of the chapel, and other assistants from London, consisted of two odes, one in English and one in Latin, written by Dr. Joseph Trapp. The Music to both these odes was afterwards neatly engraved on copper, and published in score.

During the successful war of Queen Anne, the frequent victories obtained by the Duke of Marlborough occasioned Dr. Crofts, as composer to her Majesty, to be frequently called upon to furnish hymns or anthems of thanksgiving. Several of these and other occasional compositions for the church, are printed in his works and still performed in our cathedrals.

In 1724, Dr. Crofts published, by subscription, a splendid edition of his choral Music in two volumes folio, under the title of *Musica Sacra*, or "Select Anthems in score, for two, three, four, five, six, seven, and eight Voices, to which is added the Burial Service, as it is occasionally performed in Westminster-Abbey." The neatness and accuracy with which this work was published, being the first of the kind that was stamped on pewter plates, and in score, rendered it more acceptable and useful to the purchasers; as whatever choral compositions appeared anterior to this publication had been printed with types, in single parts, and extremely incorrect.

In the preface to this work, the author gives a summary account of our cathedral Music from the time of Tallis and Bird, to his own. And here Dr. Crofts, like his colleague Weldon, celebrates Mr. Elford, a counter-tenor, of the Chapel Royal, for whom most of the solo anthems were expressly composed, "as a bright example of excellence in this kind of singing, surpassing, as far as is known, all that ever went before him, and fit to be imitated by all that come after him; particularly for his manner of giving due energy and emphasis to the words of his Music (*f*)."

To

(*f*) Mr. Richard Elford was brought up in the choir at Lincoln, but his voice fet-

tling in a counter-tenor, he was invited to Durham cathedral; where, however, he did

To review the works of this respectable master, after his own age and subsequent times have stamped them with the seal of approbation, would perhaps be thought unnecessary and arrogant. Mine is but an individual opinion, it is true; but having for many years been examining and comparing old authors, without neglecting the modern, in order to discover their intrinsic worth, and the rank they held with cotemporary composers, as well as the respect that is due to them from posterity, I should venture, if I had room, with all the justice and candour in my power, to examine his works regularly and critically, with respect to the learning, invention, expression of words, and other constituent parts of good Music, to be found in them; but they are too voluminous for minute discussion; I shall therefore only point out such movements as, upon a recent examination, have appeared to me the most excellent.

Nothing is more easy than to praise or condemn in the gross, and by a single epithet pronounce a composition, or even the whole works of an author, exquisite, or detestable; but as few productions, by professors of eminence, are equally perfect, or totally devoid of merit, it is my wish to discriminate, and my custom to assign specific reasons for censure or panegyric. And with respect to Dr. Crofts, I was long unable to speak of his works but by tradition, not having seen or heard them since I played them on the organ in the course of cathedral service at Chester, upwards of forty years ago. But having lately examined the chief works of his predecessors, and informed myself of the state in which he found our choral Music, I was the better able, in perusing his productions immediately after, to judge of the additions he had made to the common stock of melody, harmony, and modulation, during near twenty years that he presided over the first choir in the kingdom.

did not remain long, before he was encouraged to go up to London, in order to try his fortune on the stage. In 1706, his name appears in Downes the prompter's list of performers in Durfey's opera of "The Wonders in the Sun, or the Kingdom of Birds." But his person and action being awkward and clumsy, he quitted the thea-

tre, and was admitted a gentleman of the Chapel Royal, as well as to the places of lay-vicar of St. Paul's and Westminster-Abbey. He had an addition of a hundred pounds a year made to his salary in the chapel, on account of the uncommon excellence of his voice.

Volume I. The movement page first, must have been thought somewhat elegant at the time it was composed; it still stands its ground as an agreeable movement, except at the closes, which, like the sleeves of a coat, change their fashion more frequently than any other of its constituent parts. The subject, however, is better treated as a chorus, page 2. The movement, page 3, is so much in the style of Corelli (see his first solo) that it is difficult not to imagine the author had it in mind when he went to work. Page 4, the composition in two or three places is not clear, or defensible by good rules or example (g). The rest of the anthem is pleasing, and the last chorus admirable, particularly the pauses at the beginning, which have a very solemn effect (h).

The opening of the second anthem: "Lord, what love have I unto thy law," in two parts, is reverential, and free from common vulgar passages. And the chorus and next movement would be still better if they were not frequently poisoned and imbittered by the combination of major third and minor sixth. The next movement, in $\frac{3}{2}$, is tame and languid, but the last chorus is sufficiently spirited and pleasing to make the hearers wish it longer.

In the first movement of the third anthem, page 18, the base gives a spirit to an unmeaning treble, till we come to the new point led off by the base, line 3, bar the third, which is pretty and still modern; and as this was a *Thanksgiving Anthem* composed, in 1708, by command, there is a degree of jubilation in the rest of the movement, which is at least entitled to the merit of propriety (i). The rest of this anthem has no peculiar marks of strength or originality.

The fugue which opens the fourth anthem, page 31, is on a

(g) Line first, bar sixth, the seventh in the treble, not good in itself, is not to be found in the accompaniment as figured by the author. Line fourth, bar second, the base, in two parts, not good. Line fifth, bar first, the base falling a superfluous or redundant fifth is awkward and unnecessary, as B would have led to A much better, without changing the harmony.

(h) Page 9, line second, bar first, the F

natural, in the counter-tenor, against the F sharp, in the second treble, is a bad expedient for avoiding two fifths with the upper part.

(i) Page 18, line third, bar second, the fall from D sharp to G natural has never been done by good contrapuntists since Corelli's works have been known. Page 23, line the last, two plump fifths have escaped the author, very unequivocally.

marked

marked and pleasing subject, and admirably treated. The second movement has only the merit of contrast. The subject of the last chorus is agreeable and well supported.

Of the fifth anthem: "Out of the deep," there is little to remark. The two first strains breathe supplication and contrition, in broken accents, without any marked or measured melody. Indeed, prose but seldom admits of symmetric air or rhythm in the Music. Though Dr. Crofts is in general very attentive to the accent of the words, yet, in the opening of this anthem, laying the stress upon the particle *of*, instead of the more important adverb *out*, seems inaccurate: "Oūt ōf thē dēep," appears to be the true prosody of the sentence. The words: "Therefore shalt thou be feared," page 42, seem set to an air upon a moving base in the style of Corelli's sarabands; at least, I do not recollect such a regular motion of the base to an air in $\frac{3}{2}$ in our English church Music previous to the publication of his works. The movement: "I look for the Lord," upon a ground-base, is masterly; but in the next fragment, and in the movement preceding the chorus, we have little attempts at division in the voice-parts, which have been condemned in this and other choral composers, as bordering too much on theatrical levity.

The whole three-part anthem: "O Lord thou hast searched me out," page 50, is so pleasing, elegant, and seemingly simple, that a production of the early part of the present century, that surpasses it in these particulars, will not be easily found. Indeed, it is so superior in every respect to the preceding anthems in this volume, that it seems of a different period and master. It is luckily so long that it usually is divided into two distinct anthems. And such is the sublimity of the words, and happiness with which the composer has expressed them, that, notwithstanding its length, every strain is so excellent, that if well performed, every lover of divine poetry and Music must be sorry when it is concluded (*k*).

(*k*) Page 62, line second, bar-second, there is a mistake in the tenor part which totally destroys the harmony.

The fugue which opens the full anthem : " O Lord rebuke me not," in six parts, in the true style, *à capella*, of Tallis, Bird, and Palestrina, is one of the most masterly and grand compositions, of the kind, which our church, or any other church, can boast. The subjects of fugue are solemn, pleasing, and contrasted ; the words are well accented, the answers true, and, notwithstanding the number of parts, the whole composition is clear, correct, and free from confusion. The second subject, at the introduction of new words, " neither chasten me," is remarkably beautiful and well treated ; after which the plain counterpoint has a good effect in resting the ear and attention, after these labyrinths ; and the third subject : " O Lord, I am weak," though not new, is differently conducted from any anterior use that has been made of it ; and after it has been allotted to each part, the return to plain counterpoint is happy and striking. The last chorus, which is a double fugue upon two fine subjects, is equally well supported and masterly ; and after it has been extended to a sufficient length, the application of this subject to different words, is welcome to the ear ; and lastly, in the *Amen*, there is a spirit and design, which manifest both genius and learning (1).

The anthem for three voices : " We wait for thy loving kindness," page eighty-seven, has a merit of a very different kind ; here the *melody*, particularly in the first movement, is not only pathetic but frequently graceful and elegant in a way not unbecoming the sacred text and place of performance. And the anthem for three voices, from the eighty-eighth psalm, is truly pathetic and expressive, from the beginning to the end ; but, unluckily, the key in which it is composed (F minor) is so much out of tune on the organ, as it is usually tempered, that the effect must be doubly offensive to those who, though possessed of good ears, are unable to account for it (m).

(1) The two octaves in the last line of the chorus, between the second treble and the tenor, will be easily pardoned, in so many parts, by a good contrapuntist, for the sake of the imitations.

(m) In the verse, page 139, " Dost thou shew wonders among the dead," the interval, which the author calls a ninth resolved upwards into the tenth, being used as an *appoggiatura*, should have been figured $\sharp 7$.

The thanksgiving anthem: "Rejoice in the Lord," page 33, page 143, is a very elaborate composition, accompanied with instruments; and if it be remembered, that it was produced about the middle of Queen Anne's reign, before the arrival of Handel, our great model for Music richly accompanied, the symphony or introduction, with a solo part for the hautbois, and two violins, tenor, and base, must shew Crofts in the light of a man of genius, who, without leaning, or preying upon the abilities of others, dared to advance farther into the dark recesses of latent effects than his predecessors. This anthem, on account of its wanting instrumental accompaniments, is not performed in our cathedral service, which is to be lamented, as the first and last movements are extremely pleasing and masterly.

The burial service, which finishes the first volume, is composed upon an idea suggested by Henry Purcell, who only lived to accomplish one movement. "Thou knowest Lord the secrets of our hearts," which was performed at the funeral of Queen Mary, and his own. It is in simple counterpoint of note against note, so that every one of the four parts utter the same word and syllable at the same instant, according to the wish of Mr. Mason, and those who dislike fugue and florid counterpoint, in which all the parts are often singing different words. And it must be owned, that in this solemn service, the effect of simplicity and syllabic coincidence is admirable. The additions which Dr. Crofts has made to Purcell's production are worthy of the model he adopted (*n*). The service is chiefly in the key of G minor, with frequent pauses, which, assisted by admirable modulation, have an effect at once grand and sorrowful. Dr. Tudway, who attended the funeral of Queen Mary, says that Purcell's anthem was accompanied by flat trumpets. Though this movement by Purcell begins in E flat, it ends on the chord of G with a natural third. The modulation quits the original key at the third bar, and is afterwards more in G minor than in any other key. On which account Dr. Crofts very judiciously began

(*n*) Page 177, line third, bar first, two octaves have escaped the author, between the treble part and the tenor: $\begin{smallmatrix} c & b \\ dc & bc \end{smallmatrix}$.

and ended his additions in that key. In praising the simplicity of this anthem, Dr. Tudway does not, as has been imagined, oppose it to fugue, of which all the old masters he recommends as models were so fond, but to the light style, with symphonies, ritornels, and divisions, of which Purcell, and after him, Crofts and Weldon were so frequently lavish. But the good doctor not being able to keep pace with them in these flights, tried to check and disgrace them by censure.

Vol. II. The opening of the first anthem, in this volume: "Hear my prayer, O Lord," and indeed every part of it, is peculiarly pathetic; no vulgar passages, or divisions, occur, whose sole merit is derived from execution. The words, the sentiments, and the place of performance, have been equally respected.

The full anthem: "O Lord God of my salvation," is an excellent composition throughout: the first movement is rich in harmony and elegant in expression, and nothing of the kind can be more pleasing than the last movement.

There are few compositions in our church perhaps more replete with excellencies of various kinds than the anthem: "I cried unto the Lord," page 86. The counterpoint is clear and correct, the contrivance in the fugues and imitations, ingenious and learned, and the expression, particularly of the verse: "I poured out my complaints," truly pathetic. There are many other excellent compositions in this volume, which, to describe separately, would run this article to too great a length.

The full anthem: "God is gone up," in Dr. Boyce's second volume, has been always in favour; the modulation is natural and simple, the harmony clear, and a decorous cheerfulness runs through every movement, suitable to the words, and to pious jubilation. The next anthem, in the same volume: "Put me not to rebuke," breathes a different spirit: the subject, key, modulation, and expression, are all plaintive; and though there is much *art* in the conduct of the fugues and imitations, it is so well allied to a seeming *natural pathetic*, as to require no great science to feel its effects in performance.

The first of the two verse anthems by this author, in the same

volume, is elegant and pleasing. This was probably composed late in his life, when the operas and Italian singing began to have a general effect on our melody, as the use he has made of appoggiaturas seems new in our choral books. "Give the King thy judgments," which immediately follows this, is another very agreeable verse anthem, with rather more fire and spirit than usual in this composer's productions. The divisions, however, in this anthem, were originally too secular for the church, and at present are too common for the stage.

His anthem published by Walsh, in *A Collection of select Anthems*: "Blessed are thy people, O Lord," is clear and correct composition, with considerable art, and some nerves; particularly in the third movement: "For thou art the glory." He continues, however, in all his works, the use of the sharp third and flat sixth, like his predecessors, to the great sorrow of my ears; and this vile combination does not seem to have been held in sufficient abhorrence till the time of Dr. Green, in whose works I find no traces of it.

There is another very agreeable anthem by Crofts in the same collection: "Deliver us, O Lord our God," which has no fault in the composition, except that mentioned above, for the last time, and which he had in common with all the masters of the preceding century. The last chorus of this anthem is so pleasing, that I should insert it here, as a specimen of his clear and unaffected style, if it was difficult to find.

I shall now conclude my remarks on this author, by observing, that though he, perhaps, never reaches the sublime, yet he is sometimes grand, and often pathetic. His allegros are always more feeble than his slow movements. But more melody is necessary, to support cheerfulness with decorum and dignity, than Crofts, or indeed the whole nation, could furnish, during the first twenty years of this century.

This pleasing composer and amiable man died in August 1727, in the fiftieth year of his age, of an illness occasioned by his attendance on his duty at the coronation of his late Majesty, King George

George II. He was buried in the north isle of Westminster-Abbey, where a monument, with a long and honourable inscription, was erected to his memory, at the expence of his countryman as well as intimate friend and great admirer, Humphrey Wyrley Birch, Esq. whose passion for church Music of the pathetic kind, particularly the funeral service by Purcell and Crofts, was such, that he would quit the most remote part of the kingdom, and ride night and day, in order to hear it performed at Westminster-Abbey.

JOHN WELDON, born at Chichester, learned the rudiments of Music of Mr. John Porter, organist of Eton college, and afterwards received instructions from Henry Purcell. He was for some time organist of New College, Oxon. But in 1701, he was appointed a gentleman extraordinary of the Chapel Royal; and in 1708, succeeded Dr. Blow, as one of his Majesty's organists. In 1715, upon the establishment of a second composer's place in the King's chapel, Weldon was the first who filled that station, of which he seemed conscientiously determined to fulfil all the duties; for before he had long been in possession of this office, he gave proofs of his abilities and diligence in the composition of the Communion service, as well as the several anthems required by the conditions of his appointment.

He was likewise organist of St. Bride's church, in Fleet-street; and of St. Martin's in the Fields (o).

Besides many favourite songs and solo anthems of the time, Weldon composed two full anthems, which are inserted in Dr. Boyce's second volume; the first is rather too familiar and common; but the second: "Hear my crying, O God," in six parts, is a very pleasing and masterly composition; particularly the first movement. In the second movement, the words *up upon*, are unfortunately expressed by notes that succeed each other too rapidly for

(o) King George I. having been chosen church-warden of his own parish of St. Martin's in the Fields, soon after his arrival in England; in order to get rid of the trouble of so inglorious an office, made the parish a present of the instrument which is now standing in the church, built by

Schwarbroock; and the parish, probably as a mark of duty and respect, appointed Weldon, his Majesty's own organist, to play upon it; who, at his decease, was succeeded by the late Mr. Kelway, and Mr. Kelway by Dr. Cooke.

their

their easy utterance. The passages of the third and fourth movements seem much worn by forty or fifty years use; however, the pauses, at the end of the last strain, have a fine effect.

Six of his solo anthems were published about the year 1730; I say *about* that period, as musical chronology is become a very difficult study. The late Mr. Walsh, finding that *old* music-books were like old almanacks, ceased very early in this century to ascertain the time of their birth by dates, which have ever since been as carefully concealed as the age of stale virgins.

Weldon's powers of invention and of harmonical combination seem very much limited. His anthems had the advantage of being sung in the Chapel Royal by a celebrated singer, Mr. Richard Elford; but now, let who will execute them, they must appear feeble and old-fashioned, unless the embellishments of George the First's time are changed for those in present use. The truth is, that the fund of original conception or science, which alone can render old Music valuable to the curious, long after the style in which it was written is become antiquated and forgotten, was never very considerable in Weldon's productions. His first anthem: "O Lord rebuke me not," remained long in favour, when well sung in our cathedrals, from its resemblance to the style of Purcell; and the natural and easy slow minuet air to "Turn thee, O Lord, and deliver my soul," which has so much of a secular song and rondeau in it, that it is remembered with pleasure by the musical part of a congregation, who are more likely to bear it in mind, than more serious parts of the service.

The productions of Weldon appear flimsy after those of Crofts; and Dr. Green's after Handel's; yet Green compared with Weldon is a giant: that is, a Handel.

There is a vice of which composers of small resources are often inadvertently guilty, for want of a sincere and judicious friend to tell them of it; and that is, eternal repetition of the same passage, a note higher or a note lower, which the Italians call *ROSALIA*. This certainly originates in the want of ideas, and yet it may be avoided by attention, though the sheet would not fill so fast.

Weldon.

Weldon has indulged himself in these repetitions to a tiresome degree, in several of his anthems; but in the ritornel to "Have mercy upon me, O God," he has iterated the same poor passage, a note lower, seven times, successively!

His song for two voices: "As I saw fair Clora walk alone," was in great favour during my youth; and his air in the *Judgment of Paris*: "Let ambition fire thy mind," is a melody so natural and pleasing, that, like an ever-green, in vegetation, it will always be fresh and in season. And there is no air in greater favour than this at present, in the English opera of *Love in a Village*, to the words: "Hope, thou nurse of young desire."

This composer died in 1736, and was succeeded in the King's chapel by the late Dr. Boyce.

Having had a personal knowledge of Dr. Greene early in my musical life, and well remembering the effect which many of his compositions had on the public at the time of their first appearance, I shall the less frequently be obliged to have recourse to tradition, or to seek information concerning him, from others.

MAURICE GREENE, was the son of the Rev. Thomas Greene, vicar of St. Olave Jewry, in London, and nephew of John Greene, serjeant at law. He was brought up in the choir of St. Paul, and when his voice broke was bound apprentice to Brind, the organist of that cathedral. He was early noticed as an elegant organ player and composer for the church, and obtained the place of organist of St. Dunstan in the West, before he was twenty years of age. In 1717, on the death of Daniel Purcell, he was likewise elected organist of St. Andrew's, Holborn; but the next year, his master Brind dying, Greene was appointed his successor by the dean and chapter of St. Paul's; upon which event, he quitted both the places he had previously obtained. In 1726, on the death of Dr. Crofts, he was appointed organist and composer to the Chapel Royal; and on the death of Eccles, 1735, master of his Majesty's band. In 1730, he obtained the degree of doctor in Music at Cambridge, and was appointed public Music professor in the same university, in the room of Dr. Tudway. Greene was an intelligent

gent man, a constant attendant at the opera, and an acute observer of the improvements in composition and performance, which Handel, and the Italian singers employed in his dramas, had introduced into this country. His melody is therefore more elegant, and harmony more pure, than those of his predecessors, though less nervous and original. Greene had the misfortune to live in the age and neighbourhood of a musical giant, with whom he was utterly unable to contend, but by cabal and alliance with his enemies. Handel was but too prone to treat inferior artists with contempt; what provocation he had received from Greene, after their first acquaintance, when our countryman had a due sense of his great powers, I know not; but for many years of his life, he never spoke of him without some injurious epithet. Greene's figure was below the common size, and he had the misfortune to be very much deformed; yet his address and exterior manners were those of a man of the world, mild, attentive, and well-bred. History has little to do with the infirmities of artists; who being *men*, in spite of uncommon gifts and inspirations, are subject to human frailties, which enthusiasm, praise, and the love of fame, more frequently augment than diminish.

The same want of room, which shortened my account of the anthems of his predecessor, Dr. Crofts, will now oblige me to be very concise in speaking of Greene's ecclesiastical compositions, though in both there is much room for discrimination and fair criticism. Among the faults to be ascribed to this composer, none are so flagrant as the light divisions in which his solo anthems abound, and the repetition of passages a note higher or a note lower in what the Italians call *rosalia*, which are always dull, tiresome, and indications of a sterile fancy. The opening of his second solo anthem, Vol. I. page 26, is very solemn and pathetic, and the organ-part judicious and pleasing; but, page 45, *Santa Rosalia* tells her beads six times, while one very short passage is singing. "Lord how long wilt thou be angry," *alla Palestrina*, for five voices, though none of the subjects are new, seems to me to be the best full anthem by this author. The style is clear, the answers are

regular, and the modulation such as discovers a familiar acquaintance with the best ancient writers for the church. Of the full anthem: "O sing unto the Lord," for five voices, the fugue in the first movement is well worked, and has a good effect in performance; but the rest of the anthem is not equal in its subjects, or their treatment. "Lord how are they increased that trouble me," seems one of the most pleasing of Dr. Greene's solo anthems. The last anthem in the first volume, for two voices, has many pleasing passages, and rather more variety of subject than most of the others.

The first movement in the second volume seems calculated to display, in the performers, the power of making a shake upon short notice. A shake, judiciously applied, is a brilliant embellishment in a finger; but when lavished, improperly, is pert and unmeaning; nor is it ever more so than upon the first note of a movement. There are no fewer than seventeen or eighteen shakes distributed among the performers in the course of one page, which are more than a modern opera singer of judgment, taste, and expression, would use in a month, were his shake ever so good; the rest of the anthem is on common subjects, which are commonly treated.

The two-part anthem: "Thou, O God, art praised," has repeatedly a passage on the word *praised*, which has to my ear the disagreeable effect of two fifths; and there is a point at "unto thee shall my vow be performed," for which he was manifestly obliged to the second movement of Handel's fourth organ concerto. The rest of the anthem consists of agreeable passages of the times, but nothing like originality appears in any one idea.

"The King shall rejoice," for three voices, is agreeable common-place. Perhaps that is hardly enough to say of the second movement: "O Lord grant me a long life."

"Let my complaint," a full anthem, à 5, is very solemn and solid composition.

The anthem for Christmas day has an air of chearfulness, suitable to the occasion, which runs through the whole composition.

"Hear my prayer, O God," has more merit of gravity and expression.

sion than most of the anthems in this volume. "O sing unto God," is agreeable Music, but too secular in its melody, and return to the subject. "Have mercy upon me," the two first movements of this anthem, are sober and affecting; but the second and third have too many vulgar and worn-out divisions; the last chorus, however, is more ecclesiastical, and less common in melody and modulation. The solo anthem: "Hear, O Lord," for a base voice, is grave and pathetic, on the model of Handel's best oratorio songs. The same may be said of the next, for two voices: "I will seek unto God." "O God of my righteousness," is superior in the duet movement, solo verse, and chorus, to any thing in the preceding part of this volume; this anthem rises somewhat above mediocrity. "O give thanks," is wholly built with Corelli's and Handel's materials, though somewhat differently disposed; particularly page 86, where the whole harmony moves together, one note lower, three times, after a crotchet rest, to this base: E, B $\sharp$ 3d, E; D, A $\sharp$ 3d, D; C, G, C. "The Lord is my shepherd," has too many light song-passages in it, notwithstanding the white and square notes which give it a venerable look on paper. "O how amiable are thy dwellings," is a very agreeable anthem, though the passages were not new at the time it was composed. The movement with an organ accompaniment, in the anthem: "My soul truly waiteth," is well conducted, and not common; the rest of the anthem has merit, particularly the chorus of the last movement. "The Lord, even the most mighty God," for a base voice, is set with great gravity and propriety; few anthems, indeed, for that species of voice, are more agreeable; the points, however, in the chorus, are very common. The anthem in eight parts, *à due cori*: "How long wilt thou forget me," is very well written, *à capella*, and good Music. Indeed, the first movement of this anthem manifests greater abilities than any thing that I have seen by this author, who is usually very correct in his harmony, but as to invention and design, he seldom soars above mediocrity. "O Lord give thine ear unto my prayer," for two voices, is very pleasing Music, particularly the first movement. The last anthem of

this volume is made up of common play-house passages ; the first movement is heavy and monotonous ; the andante tiresome, by the repetitions of an old harpsichord-lesson passage in the base ; the chorus justifies Mr. Mason's censure of this author, by too long and frequent divisions ; these are too vulgar and riotous for the church, and, indeed, would have no merit of novelty any where. The *vivace*, page 151, upon which the last chorus is built, has more of the dancing-minuet, or Vauxhall song, in it, than belong to that species of gravity and dignity which befits devotion. I think I could neither play nor hear this movement in a church, without feeling ashamed of its impropriety.

There is considerable merit of various kinds in the Collection of Catches, Canons, and two-part Songs, published by Dr. Greene ; the composition is clear, correct, and masterly ; the melodies, for the times when they were produced, are elegant, and designs intelligent and ingenious. It was sarcastically said, during the life of this composer, that his secular Music smelt of the church, and his anthems of the theatre. The truth is, he produced but little secular Music. His song of " Go rose," was long in general favour, and some of his easy ballads, as " Busy, curious, thirsty fly ;" " Dear Chloe while thus beyond measure," &c. were the delight of ballad-mongers fifty years ago. The collection of harpsichord lessons, which he published late in his life, though they discovered no great powers of invention, or hand, had its day of favour, as a boarding-school book ; for being neither so elaborate as those of Handel, nor difficult as Scarlatti or Alberti's, they gave but little trouble either to the master or scholar. Indeed, as all the passages are so familiar and temporary, they seem to have been occasionally produced for idle pupils at different times, with whom facility was the first recommendation.

Dr. Greene, during the last years of his life, began to collect the services and anthems of our old church composers, from the single parts used in the several cathedrals of the kingdom, in order to correct and publish them in score ; a plan which he did not live to accomplish ; but bequeathing his papers to Dr. Boyce, it was afterwards

afterwards executed in a very splendid and ample manner. Dr. Greene died in 1755, and was succeeded, as composer to the Chapel Royal and master of his Majesty's band, by his worthy pupil Dr. William Boyce.

JOHN TRAVERS, brought up in St. George's chapel at Windsor, and afterwards bound apprentice to Dr. Greene, about the year 1730, was elected organist of St. Paul's, Covent-garden; and in 1737, on the death of Jonathan Martin, was appointed one of the organists of the King's chapel. He afterwards attached himself to Dr. Pepusch, and confined his studies solely to the correct, dry, and fanciless style of that master. His compositions, however pure the harmony, can only be ranked with pieces of mechanism, which labour alone may produce, without the assistance of genius.

Dr. WILLIAM BOYCE has been frequently mentioned in the course of this work, as a professor to whom our choral service is greatly indebted for the well selected, correct, and splendid collection of our cathedral Music, which he published in three volumes large folio, upon the plan, and at the recommendation, of his master and predecessor Dr. Greene; and now, in gratitude for the care he has taken of the productions and fame of others, it becomes the duty of an historian of the musical art, to pay a just tribute to his own memory, as an artist.

In 1734, he was a candidate for the place of organist of St. Michael's church, Cornhill, with Froud, Young, James Worgan, and Kelway. But though he was unsuccessful in this application, Kelway having been elected, yet he was appointed, the same year, to the place of organist of Oxford chapel; and in 1736, upon the death of Weldon, when Kelway being elected organist of St. Martin's in the Fields, resigned his place at St. Michael's Cornhill, Boyce was not only elected organist of that church, but organist and composer in the Chapel Royal.

The same year he set *David's Lamentation over Saul and Jonathan*, which was performed at the Apollo Society. About the year 1743, he produced his serenata of *Solomon*, which was not only long and justly admired, as a pleasing and elegant composition, but

but still affords great delight to the friends of English Music, whenever it is performed. His next publication was *Twelve Sonatas or Trios for two Violins and a Base*, which were longer and more generally purchased, performed, and admired, than any productions of the kind in this kingdom, except those of Corelli. They were not only in constant use, as chamber Music, in private concerts, for which they were originally designed, but in our theatres, as act-tunes, and public gardens, as favourite pieces, during many years.

In 1749, he set the ode written by the Rev. Mr. Mason, for the installation of the late Duke of Newcastle, as chancellor of the University of Cambridge, at which time he was honoured with the degree of doctor in Music, by that university. Soon after this event, he set the *Chaplet*, a musical drama, written by the late Mr. Mendez, for Drury-lane theatre, which had a very favourable reception, and long run, and continued many years in use among the *stock* pieces for that theatre. Not long after the first performance of this drama, his friend Mr. Beard brought on the same stage the secular ode, written by Dryden, and originally set by Dr. Boyce for Hickford's room, or the Castle concert, where it was first performed, in still life. This piece, though less successful than the *Chaplet*, by the animated performance and friendly zeal of Mr. Beard, was many times exhibited before it was wholly laid aside. These compositions, with occasional single songs for Vauxhall and Ranelagh, disseminated the fame of Dr. Boyce throughout the kingdom, as a dramatic and miscellaneous composer, while his choral compositions for the King's chapel, for the feast of the sons of the clergy at St. Paul's, and for the triennial meetings at the three cathedrals of Worcester, Hereford, and Gloucester, at the performances in all which places he constantly presided till the time of his death, established his reputation as an ecclesiastical composer and able master of harmony.

Dr. Boyce, with all due reverence for the abilities of Handel, was one of the few of our church composers who neither pillaged nor servilely imitated him. There is an original and sterling merit in his productions, founded as much on the study of our own old
8
masters,

masters, as on the best models of other countries, that gives to all his works a peculiar stamp and character of his own, for strength, clearness, and facility, without any mixture of styles, or extraneous and heterogeneous ornaments.

Dr. Boyce dying in 1779, was succeeded, in the Chapel Royal, by Mr. Dupuis, and, as master of his Majesty's band, by Mr. Stanley.

JOHN STANLEY, B. M. was born 1713. At two years old he totally lost his sight, by falling on a marble hearth with a china basin in his hand. At the age of seven he first began to learn Music, as an art that was likely to amuse him, but without his friends supposing it possible for him, circumstanced as he was, to make it his profession. His first master was, Reading, a scholar of Dr. Blow, and organist of Hackney. But his father finding that he not only received great pleasure from Music, but had made a rapid progress, placed him with Dr. Greene, under whom he studied with great diligence, and a success that was astonishing. At eleven years of age he obtained the place of organist of All-hallows, Bread-street, and in 1726, at the age of thirteen, was elected organist of St. Andrew's, Holborn, in preference to a great number of candidates. In 1734 the benchers of the honourable society of the Inner Temple elected him one of their organists. These two places he retained till the time of his death. Few professors have spent a more active life in every branch of his art, than this extraordinary musician; having been not only a most neat, pleasing, and accurate performer, but a natural and agreeable composer, and an intelligent instructor. He was the conductor and soul of the Swan and Castle concerts in the city, as long as they subsisted. Upon the death of Handel he and Mr. Smith undertook to superintend the performance of oratorios, during Lent; and after Mr. Smith retired, he carried them on, in conjunction with Mr. Linley, till within two years of his death, in 1786. This ingenious and worthy professor, whose blindness excited the pity, and performance the admiration, of the public, for so many years, will be long lamented by his surviving friends; for they have lost in him, exclusive of his musical talents, a most intelligent and agreeable companion, who contributed to the pleasures

fures of society as much by his conversation in private, as by his professional merit in public. He was succeeded in his office, as master of the King's band, by Mr. Parsons.

Dr. NARES was a studious and sound musician, who had distinguished himself as an organ-player and composer of anthems at York, before his advancement to the Chapel Royal, in 1758, as successor to Travers. On the death of Bernard Gates, he was likewise appointed master of the children of the Chapel Royal; and in both these capacities, his diligence in composing for the chapel, and instructing the children, to which he devoted his whole time, acquired him great respect. Dr. Nares dying in 1783, was succeeded in the Chapel Royal by Dr. Arnold, and as master of the children, by Dr. Ayrton.

END OF THE THIRD VOLUME.
